Some receiver manufacturers are more sensitive than others to this sort of problem, and can be of aid to you in resolving the issue. Most like to palm the problem off as the fault of the transmitting station, even when it is not, because it saves them money.

Many communities will have amateur radio clubs who have a radio frequency interference committee. These people are experienced in dealing with cases of radio interference and can be of aid to you in resolving a problem that is beyond the abilities of you or your neighbor to address. If your neighbor is a radio amateur, it is likely he will know these people and can call on their aid to resolve the problem. If your neighbor is not a radio amateur, then you may wish to attempt to contact a local radio amateur club for assistance directly. They are usually willing to aid you even if the problem is not related to amateur radio operations.

Note that establishing a cooperative relationship with your neighbor right from the start will be essential to resolving this sort of problem. Don't be confrontational. It will be counterproductive. You will *need* his cooperation and assistance to solve the problem, so try to enlist his aid from the start. Most radio amateurs will be interested in resolving the problem.

Unfortunately, a few radio amateurs, and a fairly large subset of CB operators, won't be receptive to resolving the problem, or won't know how to resolve the problem. Then things can become sticky. The FCC will generally be of no help. Your community radio club may be able to help. If not, the ARRL has a book which explains interference problems and steps which can be taken to resolve them.

If it turns out that the problem is with the transmitter of an uncooperative neighbor (rare but possible), then you have a real problem. First make every effort to determine that the problem is indeed due to improper transmitter operation. It will be highly embarrassing if it turns out that the problem is with your equipment after all. Once you are certain of this, persistent pressure on your FCC field office can sometimes get results. It is their responsibility to ensure that transmitting stations are in compliance with good engineering practice. They haven't been very interested in doing their job of late, but it is possible to get them to act if you bring enough pressure to bear on them.

Most cases shouldn't become this extreme. There is usually a simple technical solution to interference problems, and neighbors can usually work together to reach a solution. Try to approach the issue on this level.

No, just someone with a good credit record with his bank. You've obviously never operated a business. The idea is to do it with *someone else's money*. No one puts up $1,000,000 of their own cash to get a McDonalds franchise. That's stupid. You borrow the money based on your business plan, and pay it off out of operating revenues. Your take home after expenses the first several years may put you near the poverty line. If you *had* a million dollars, you could let it draw interest and make a bigger income without having to work 120 hours a week. Selling Big Macs is a way to (eventually) become moderately well off, but you don't have to be rich to start.

It amazes me that people can actually finish high school in this country without a grasp of business economics.

GREETINGS TO ALL ON 3950

Hello all you dedicated KJI-haters out there in radio land. This is your old buddy and radio crime fighter, NX0T (retired mad-dog, retired nazi pig farmer) wishing you all the best in your continued efforts to rid 75 meters of that awful curse known as WA9KJI. We don't hear too much of the goings-on at 3950 on the radio dial, but when we do, it is refreshing to still know there are dedicated hams out there who are still reminding the Silvertone Scientist from Evansville he's just a no-good Communist. Good job, fellows; outstanding. Don't give that blithering Communist a break on 3950. Run his miserable carcass off when ever you find him attempting to stifle free speech on ham radio.

There's a chance we may be able to get back on the air this summer and once again entertain the troops, tho I'm more interested now in computer goings-on than fighting the Nazis vs the Jews war. No future in that, for sure. If nothing else, it would be fun to once again pull the chain of that sneaky little neo-Communist from Indiana, Doctor Silvertone. Yes indeedie, that would be lots of fun.

Go to your public library and check out Aleksandr Solzhenitsyn's GULAG ARCHIPELAGO. Comes in three volumes. Just pick one, doesn't matter which. They're all good. Excellent material to reveal what liars the mainstream media really are, how they've covered up who the real butchers have been in this century.

Write if you find work. We'll do the same. . . . . .

73's to all

Even if it DID cost the same as a small business (which it does not) if
everybody could afford to start a small business, then no one one be an
employee of another company. Everyone would have thier own company.
Truth is, it is very expensive to buy, and even more difficult to start
a new station at the current requirements. However, starting a small 1
to 10 watt station in your home would be as inexpensive as starting up a
Ham radio station. The fact that even a Judge realizes this and is
not letting the FCC shut down that California "Pirate" shows that there
is obviously some logic to this.

There is no limit to the amount of hair salons or auto repair shops that can be set up in any area, but at a high transmitting power that takes up a channel frequency for many miles, it limits how many stations can be set up in any location. There can be NO NEW stations set up in my area and many others, so I would have to pay millions for one of the existing licenses! If however, small 1 or 5 watt stations could be set up in the 88.1 to 91.9 band, there would be space for a lot more micro stations that could be started for little money.

You obviously didn't have "new math" taught at your high school! ;-)
I have been running and subsisting on my own bidness for five years now,
it has given me fantastic sarcasm sheilding.

I believe you are oversimplifying. I will admit that I have not started
a radio station- yet. However, the research I have been doing (consisting
mainly of picking the brains of a successful station owner in my area and
scoping the FCC website) have given me a different set of numbers
entirely. Larger ones. Perhaps a few years in the business would give me a
different perspective, but right now the filing costs seem more than a
little prohibitive.

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the
box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks
for reading and 73 -

Sure he CAN, but very likely he won't....If a complaint is made to the
FCC, you'll both recieve letters telling you how to deal with the
problem. Chances are a low pass filter on his end, or a high pass
filter on the complaining party's equipment will work wonders.

Firstly thanks to Warren, Robin and Christer for your replies.

I would just like to get this all clear in my head. Is this correct?

An invertor steps the voltage up (e.g. 12v to 230v)

A transformer steps the voltage down (e.g. 230v to 110v)

A converter can mean either of these things.

Here is a table of how (I think) I need to connect everything up :-
(I hope that it comes out okay on your screen)

110v appliances 230v appliances 12v appliances
(A/C, microwave, (stereo, laptop) (phone)
fridge)

230v need to convert NO PROBLEM NO NEED
hookup 230v to 110v (must spur off
using BIG transformer before transf.)

110v NO PROBLEMS use inverter NO NEED
genny.

12v NO NEED use inverter NO PROBLEMS
battery

So I'll need to spur off some 230v sockets before the transformer. I'll also need to use a 110v-230v inverter when using the generator for the stereo etc. Should I also leave the 110v hook up as it is and then plug in the transformer to there and hang another socket off it so that I can still use 110v hook ups ??? (we hope to eventually make it to the states)

LAPTOP COMPUTER - Could use 12v cigar lighter, 110v US transformer or 230 EU transformer. (haven't bought one yet)

PORTABLE CD/RAD/CASS STEREO - use batteries (domestic ones) or use 230v hook up or use inverter/generator.

MOBILE PHONE CHARGER - use 12v car kit (got it already) or use 230v when on hook up.

CB RADIO - 12v battery.

We dont have/want a TV so that'll help.

r
> would be lighter but not as safe.

What's an autotransformer?

What about other continents? Please don't tell me that they use 170 volts in Africa and 64 volts in asia :-)

Thanks again.

3956. H40 -- New DXCC counter?

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-13 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <6ebnk8$u7$1@nnrp1.dejanews.com>
Source record: 175980
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

Tim Totten posted the following on the DX reflector.

The Temotu Islands--A New DXCC Country!

The South China Sea DX Team (SCSDXT) has extensively studied the new DXCC criteria which will become effective on 31 March, 1998. This research has led to the discovery of several potential new DXCC entities.

The task ahead is now clear--to further research these potential new ones, to file the applications for inclusion on the Holy List, and most importantly to activate these new entities. It is left as an exercise for the keen student of DX to independently "re-discover" these new DXCC counters. With this in mind, however, the first target entity has been selected and its activation is hereby announced.

The Temotu Islands, located in the South Pacific, collectively form the easternmost province of the Solomon Islands, an independent country since 1978. Because Temotu is separated by more than 350 km from the rest of the Solomon Islands, it should easily qualify as a new DXCC entity. The SCSDXT has teamed with the Solomon Islands' IARU member organization, SIRS (Solomon Islands Radio Society), in organizing a full-scale DXpedition to Temotu, as well as preparing the application for new DXCC status.

The team for this operation includes members from four continents:

H44GP, H44GR, JA5DQH, N4GN, N7NG, OH0XX, OH1RY,
OH2BC, OH2BE, OH2BH, OH2TA, W6OSP and 9V1YC

In recognition of its new status, the Solomon telecommunications authorities have agreed to assign the previously unused H40 prefix to Temotu for all future amateur operations. This first Temotu DXpedition has been issued the special call sign H40AA.

Visiting team members will begin arriving on 21 March and may be found on the air using their individual H44 call signs while making final preparations for the main event. These early operations--including all-band activity in the CQ WPX SSB Contest, 27-28 March--will count for DXCC credit as the Solomon Islands, under the current rules. The IOTA number is OC-100.

At 2359Z on 31 March, the H40AA call sign will be debuted on the air, at which point QSOs will count for Temotu DXCC credit, presuming the application for new DXCC status is eventually approved. The H40AA operation will continue for approximately two weeks.

H40AA operating frequencies:

CW: 1824, 3504, 7004, 10104, 14024, 18074, 21024,
24894, 28024 and 50104 kHz
SSB: 1824, 3775, 7045, 14195, 18135, 21295, 24945,
28495 and 50104 kHz
RTTY: 14083 and 21083 kHz

Two small aircraft have been chartered to transport the operators and equipment from Guadalcanal to the Temotu Islands. Although very remote, Temotu has a rich and colorful history, dating back to the 15th century B.C.

There will be no Internet log search capability DURING the operation. DXers are encouraged to make every effort to confirm their QSOs "the old fashioned way"--by listening carefully! It is understood, of course, that there can still be cause for uncertainty at times, despite the best efforts on both ends of the pileup. Internet log search capability will likely be made available a few weeks AFTER the operation.

The H40AA team will employ Yaesu FT-1000MP and FT-900AT transceivers, as well as Alpha and FinnFet amplifiers. A variety of beam and vertical antennas will be used, inlcuding several new FinnFet models.

QSLs for H44 "warm up" QSOs (for Solomon Islands DXCC credit) will be via the home call of the individual operators. The H40AA Temotu QSLs will be handled by OH2BN:

Jarmo J. Jaakola, OH2BN
Kiilletie 5C30
Helsinki 00710
FINLAND

SIRS has kindly requested that DXers NOT send any cards for these operations via the H4 QSL bureau. OH2BN will reply to H40AA requests via the OH bureau after the initial batch of direct requests are serviced.

The team would like to especially recognize the valuable support of Yaesu Musen Co. Ltd., Mikrolog Ltd., FinnFet Ltd., the Northern California DX Foundation and INDEXA.

Further details will be announced in the coming days.

Bill,

It's probably too early to call it a "movement", but there are at least two recent contributors to this newgripe who wonder "why they have to know all that technical junk".

Here in North Central Oklahoma, there isn't much to hear between
160 and 190 KHZ. The Gwen stations chatter all the time, probably some sort
of test/hand-shake routine which, if decrypted would display a clear-text
message saying, "Your tax Dollars are at work here."

There are harmonics from the horizontal sweeps of nearby televisions
and a good deal of unidentifiable trash that appears to be hash from
switching power supplies and or display drivers.

Actually, my antenna is not the best at all for 1756-meter reception.
It is a 58-foot guy wire which has been outfitted with load-bearing
insulators on each end so it is fine for HF and SWL stuff, but probably no
good for 160 KHZ. I think that loops are used quite a bit for these
lower frequencies, but I do get lots of static and GWEN, of course. I have
never heard any of the European broadcast transmitters from here.

This should be a fairly easy band to build stuff for except for
antennas because of the land involved, but the low frequency lets one get
away with lots of things that wouldn't play on higher bands.

Hello All,

On Saturday 21 March at 0100 UTC, members of the Northern Corridor Radio Group (VK6ANC) will be activating the special event callsign VI6EWT from the tiny township of Eucla in Western Australia. Eucla is located on the South coast of West Australia, 12Km inside the border with South Australia. It's about as far away from anywhere as you can get. Whilst this is not a new country or even hot dx news, it may be of interest to quite a few people.

120 years ago, the East West Telegraph line was completed. This single wire line, measuring over 2500 Km and run over some of the most desolate and dry country in the world, brought Western Australia into communication with the rest of the world for the first time. The wire was made of thick galvanised steel. Copper was much too expensive.

At the time, Australia was not one united country but a group of independent colonies with separate governments and laws etc. The town of Eucla was the site of a telegraph repeater station. Being at the border of the two colonies of South Australia and West Australia, it had operators frome both sides located at the same station. All the operators were located in the same large room which had a large table with a dividing partition down the centre.

Telegrams originated from the South Australian end would be received by the operators on that side of the table. They used American Morse Code. The message would be taken down and then passed through the partition to the West Autralian operator who would transmit it to the next relay station using the International Morse Code.

In 1908 when the colonies all became states of the federation of Australia, the partition in the telegraph room was ceremoniously removed and the use of the International Morse Code was adopted as the standard for telegraph traffic in Australia.

The East West Telegraph has of course long since disappeared but our group, assisted by the West Australian Morsecodian Fraternity will be performing a re-enactment of the transmission and relaying via Eucla of a telegraphic message from Perth to Adelaide. This will be done using authentic Morse keys and electro mechanical sounders exactly the same as was used 120 years ago. The messages will be carried via the national telephone network by using a modem type interface unit at each station.

VI6EWT will commemorate this event and the opening of the line 120 years ago. We will operate form Eucla for 24 hours, all bands 80m - 70cm, SSB and CW. This operation will coincide with our national field day contest so we

will be avidly seeking dx contacts to help our score along. After the completion of that weekend, the callsign will be aired by various operators on as many bands and modes as possible from the Perth area for a period of a few weeks.

QSL is via VK6ANC, Buro or Direct. Photographic QSL cards showing the ruins of the old Eucla Telgraph Station will be printed and sent for all contacts made.

Thank you very much for the space and we hope to work you from Eucla.

3965. Want to build single channel nbfm receiver (147.240 Mhz)

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-13 00:00:00 UTC
From: ptcarter@ingr.com
Message-ID: <6ec4p1$mc6$1@nnrp1.dejanews.com>
Source record: 175989
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.amateur.misc

Hello-
I have a need for a single channel (need to monitor a repeater-147.240 MHZ) and am looking to put together a simple circuit to listen to only that frequency.(note- I am a no-code tech and I have friends who hang out on that repeater). I'm looking for something light (i can put in my pocket or on my belt, with a earphone)and as simple as possible. Has anyone put one together that can tell me the difficulties and the cost. I've been reading the news archives and stumbled on the MC3363 from motorola which seems like the best solution. If you have experience with this IC or if you know of a simpler path to achieve my goal, please let me know.
I read the app notes (AP980) from motorola. Here are my concerns. First off, it said not to breadboard this circuit, but to use copper traces because occllations will occur. My only tools are a soldering iron, a simpson meter, and some Radio Shack PC board. Will this be a problem? I have pretty limited electronic skills and test equipment. Also, the notes say I can flip dip switches and get 256 2-meter frequencies. This is cool, but I only need one. Can I use a crystal instead? Has anyone a shematic that will make this reciever work? Any push in the right direction will be appreciated.

Thanks,

Paul Carter KF4JIR

OOPS! Mea culpa.

Low audio is such a common problem on the 202 w/ speaker mic, with the 212
often exhibiting just the opposite problem, I put my keyboard in gear a bit
too quickly.

Sorry for any confusion.

I know less than "enough to be dangerous" about orbital mechanics, so some of you bright guys jump in here and help me out.

Heard a news item today that VEEP Algore proposes a new satellite up about a million miles, hooked to a web site, which would always give a camera view of the daylight side of earth (for weather observation and such).

"Cool deal" I mumble to myself, until I started thinking -- is it *really* possible to put a bird in a stable orbit which would do that? This is not geosynchronous, where the bird seems fixed in the sky above a certain spot, but rather solsynchronous (if that's a good term) so that it always stays above the lit side of the earth. Stated a different way, it must always remain between the sun and the earth. That sounds to me like it is a satelite of the sun, not the earth.

Ok, I can buy that, but now what little I know about old man Newton and orbital mechanics says that this orbit, with a radius 1,000,000 miles 'inside' ours (and a "year" equal to ours) must have a mass only slightly less than ours to remain "synchronous" with our orbit.

Well, you see where I'm going with this question..... Has Al been in touch with anyone who "knows some science" on this proposal? (Or am I missing something?)

> options, etc...).
>
> Thanks.
>
> Mike W2VOS

The 765 is a 100W, 10-160M, all-mode rig. Built-in power supply
and antenna tuner.

It is no longer in production, having been replaced in their lineup by
the IC-775 a couple of years ago.

There is a whole host of filter options, for AM, SSB, and CW modes.
It uses the same filter as their current rigs like the 775, so if
you have your eye on a used one, you could add any filters you wanted
which are not in it.

The 765 is a very good radio, with particularly awesome receiver
specs. Typical used prices are in the mid to high teens, depending
on condition and installed filter suite.

(edited for space)

Paul,

Unless you're determined to build one, why not try to find a used VHF
pager somewhere in that band and recrystal it to the freq you need. A
lot of times, you can pick up a used pager for $15.00 to $20.00, and a
crystal should cost somewhere between $15.00 and $30.00 max.

Good Luck!

Body handling: Binary attachment payload not displayed: vcard.vcf

Welcome!

There is a new channel on IRC. It is called #CB_Radio. It is on the undernet servers, so as long as you get on one of the undernet servers you will find it.
I am sending this out to several groups in the NG's, so please, come one come all. It will be a good way for people to chit chat and get to know one another and buy,sell, trade their goods.

If you do not have a program to access IRC, then you can get a copy of mIRC 5.3 on our web page at http://www.e-tex.com/cbcity

I hope to see you there, and have a great weekend

Dean Arthur
CB City Manager

Poor Jerry,doomed to being a wannabe the rest of his life! But he is correct,on my pages I show the background behind the people jamming these frequencies. I also have a library of some of Prestel's expletive filled web pages from the past. I can't post them here,too many f words. If anyone would like to see some request by e-mail and I will forward them just like I did to the commission he mentions. And take note of the ISP Jerry posted with,it's not his usual netusa1.net. If he was to start posting his hate-filled trash from netusa1 they would drop his account. I daresay we will be seeing a lot of trash in the future with his new IP ad.

No...using your RADIO to listen to communications that are meant to be
heard by third parties isn't a equal comparison to looking into other
people's windows. Using a illegal modified scanner in order to eavesdrop
on conversations you aren't supposed to be hearing...IS though.

> long as we did not repeat it. It is time to go back to that. This

You can listen to whatever is on your radio. Things change though when you
make attempts to illegally intercept things that wasn't meant for your
ears. It's called an "invasion of privacy".

> doesn't get the Democratic scum of the hook, however, since they

Personality quirks aside, you guys are missing the issue. It is just as
legal in the US to sit in your own home, looking out your window (with or
without binoculars) and watching your neighbor as it is to listen to your
scanner.

Do not rely on so-called weatherproof connectors for underground service.
Use such sealers as you have indicated in your above post. Liquid type
electrical tape is good if covered over an already good standard layer of
electrical tape. Weather proof heat shrink tubing (the kind with a gooey
interior that seals very well) is excellent. There are available also a kind
of thin flat strips of putty like sealer that seal connections well too. All
these above sealers should be used only after pre-wrapping the connection well
with electrical tape.

> for using the paddle.

Hi Dean,
Just saw your original post today when someone answered you.
How you use the paddles is based on what kind of keyer you have:

An IAMBIC keyer, if you squeeze both sides of the paddle, will go
dit dah dit dah dit dah dit dah. If you squeeze both keys on a non
iambic keyer, it will either make just dits or just dahs.

Someone else mentioned 'tired wrists'. Using a keyer is not a matter
of brute force, it's finesse. First, use the alan key adjustments to make
the contacts on the paddles as close together as possible, so close you
can bare see the contacts move.

Second, I have never used myself, nor have I ever met any good CW ops,
who use the iambic feature of a keyer by 'squeezing' the paddles - most
use the method you describe for a C - press DAH, press DIT press DAH,
press DIT.

For a FIVE, you would not press the DIT five times, you would press and
hold the DIT until the keyer sends five dits. Same with an O - press and
hold the DAH key until the keyer sends three DAHS.

Just remember soft and easy - if your hand is getting tired, you are using
too much effort to work the key - you should be able to send code for a
week without a tired hand.

Hope that helps......

73, Jim KH2D

Looking in your negihbor's window means you are trespassing on to their property and attempting to watch something in their own home. As we're all aware, radio waves, however, go through everyone's property, If a radio tansmission passes through my house and thourgh my body, I'm not "invading" anything by listening to it. The privacy of cell-phone users does not extend into my domain.

Welcome back LaFon, and this time can you show us that you know
something about Communicating? Also kid, I happen to believe your talk
of the accomplishments in the Navy, so why don't you grow up and act
like it. I just can't imagine a real Chief acting the way you do, so
knock it off.

As for removing all the text LaFon, what was there and what you wrote
had nothing to do with each other and unlike you, I really don't like
taking up all that space just to post one line of drivel which had
nothing to do with the quoted text. Just one of the small things you
will learn eventualy, Maybe.

I notice that no one wanted to touch this. Cuts a bit close to home for
many, I suspect. Looks like a clear violation of 97.101(b) to me. That
requires amateurs to cooperatively share spectrum, not engage in
ERP wars to compete for it.

Don't see that it has been mentioned, but put the dits on your thumb side (Note that makes the setup right or left handed). This is the traditional setup that started with the "Bug" where you needed a pretty good "swat" to produce a string of dits, and the thumb is easier to use. That way if you go to some one else's shack you can use their paddle.

A trick I learned while operating in the Lvov Ukraine club station is to change hands by turning the key around 180 degrees and using the other hand. This puts your hand over the top so a key case is handy. I have one for my bencher and you can rest your hand on top of the case.

The muscle memory translates perfectly and you can log with one hand and send with the other. I was marked off on a candidate masters exam for failing to do so.

If you want a practice phrase that you can warm up with, and is fun to send..

Anyone interested in getting an amp? if so, please send me e-mail at
MailTo:chuck@chucks2way.com?subject=Amp_Price_list

Amps work on 10 meter band.. very High Quaility products.

Serious Inquires only need e-mail.

thanks,

4009. Re: 2M HT paging/calling feature question

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-14 00:00:00 UTC
From: Paul Torgerson <torg@compuserve.com>
Message-ID: <350B10C5.6A01@compuserve.com>
Source record: 175875

From my FT-530 Manual:
"In typical appications, your receiver remains slient until it receives
three DTMF digits which match those stored in one of its code memories.
Then the squelch opens so the caller is heard, and in the paging mode,
the ringer can be set so the transceiver also rings like a telephone..
When you close the PTT to transmit, the same three prestored DTMF code
digits are trasmitted automatically. In the paging mode, three more
DTMF digits are sent, representing the 3-digit identification code of
the transmitting station."

I've played around with it, but personally I have not had a need for
this feature.

The call channel is a programable memory channel that can be quickly
accessed (toggled). This feature is usefull.

I think that if you really examine who is doing most of the bullshit, you find a lot of working class guys, smart but not really used by society to their fullest.

I am sorry but by the time you have have spent 4-10 years in college, you are not as likely to throw it away in some petty pissing contest. However, with our current society, we do not value those who do not have education. And the working class guys feel that attitude. I would say that much of this is their way of getting back.

You know, you could take this to federal court yourself. One does
not have to depend on government. Besides, several years ago the
Supreme Court stated that you have no right to expect government
to protect you (ie, you can not sue a police officer for not protecting
you from crime).

Hell, we sue for everything else.

What law prohibits this? If your neighbor's house is located right next to yours (or a busy street) and your neighbor decides to strip in front of his windows without pulling down his window shade or planting shrubbery, he would not receive much sympathy when someone happened to notice his behavior.

Only by those who believe their privacy extends over the the private
property of other people. If a radio wave goes through my house and my
body, I am not "invading" anything by listening to it. Anything someone
does in their house may be private, but not something they broadcast over
the air.
Listning to radio signals can not be compared to peeking in windows, unless
those windows are clearly visible from the street and no one has bothered
to block the view. In this case, no one would have much sympathy if someone
in the house complained that pedestrians were "invading" their privacy by
looking towards the house.

The Truth has nothing to do with a frequency or Ham Radio. That fact that this crap shows up in the shortwave news group is actually redeeming to Ham Radio as a whole. It shows what most already know. It is a small minority of obsessive and intolerant individuals, regardless of the organization or media used, that in truth have always been the problem. While not illegal, like playing music on the ham bands, the original posting is just as inappropriate here and shows the same mentality as the posting attempts to reveal of others. These people will be there regardless of what form of communication media develops in the future, just like they now infest the internet. The majority of people in Ham Radio, SWL'ing and computer hobbies are excellent individuals who will bend over backwards to support each other. Don't let the persistent nature of the negative minorities keep you from enjoying any interest to it's fullest. Spin the knob or click the mouse and you're in a whole different environment.

> Peace,
> Mike in MO.

I have been tracking some of the folks who cause problems,
especially the ones that are prsecuted. Many have passed
the code and theory requirements for Extra. They are smart.
They have the knowledge. What most lack is the piece of

paper from an university. A ham ticket is not what matters in our society. It is what job you hold. It is one of the first things we ask when we met people, what they do. Plus an university education now gives so much of the social skills needed in porfessional life. You stand outside of that circle, especially if you are smart and intelligent, you are more likely to get an attitude.

I agree that this no excuse for being rude. Just because you have been a victim, does not give you the excuse to victimize someone else. Having the right to as you see fit also means that you have a responsiblity for your actions. It means caring for others, giving of yourself. As St. Paul said, We have liberty nor a license.

Eavesdropping on someone's telephone call is the same form of voyeurism
as peering in their windows (except that one allows you to hide in your
home with your drapes closed while the other requires that you must be
peeking through your drapes).

>Since radio began we've had the right to listen to anything as
>long as we did not repeat it.

Wire-tapping someone's telephone has been illegal for quite a long
time. Now ask yourself how listening to a phone conversation
via a scanner is different from wire-tapping that party's phone.
Your intent is the same - to spy on your neighbor.

You can attempt to justify your obsession of electronic "peeping tom"
but it doesn't change the fact that you're committing a federal crime.
It's just a pity that we need such a federal law in place of what
should be a moral obligation to respect the privacy of your neighbors.

If you want the EPCA repealed, then you should also fight for allowing
unlimited wire-tapping without court intervention.

I compared scanner eavesdropping to "peering in your neighbor's window"
not looking out your own window (see >> above). And anti-Peeping Tom laws
do exist.

Why did you send me three identical emails containing your above remarks,
Ed? Please don't become the email pest that Hans has become.

Not a thing, Larry. You should be striving to do so every day of your life. Read a book, try out a new circuit, implement a new algorithm, experiment with a new antenna design, learn *something* new every day. If you aren't, you're vegetating. But that has nothing to do with amateur exams.

Well, everything is relative. If you feel that way, then the 13 wpm
test doesn't prove you can do 13.

Must admit, however, that the mulitple guess test is easier than the
old 1 solid minute test administered by FCC examiners. However, it is
a practical test of CW as is employed on the amateur bands.

I grew up in ham radio using Heathkit gear. About four years ago, I found an UNBUILT Heathkit security system for sale. I realize I may have one of the last Heathkits assembled.....worked fine, but we had to let the capacitors "burn in" for a few hours.

4028. Icom IC-W32A cellular mod here, enjoy!!!

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-14 00:00:00 UTC
From: Michel Morin <morinm@csgoeland.qc.ca>
Message-ID: <dXIO.39$%z2.499079@carnaval.risq.qc.ca>
Source record: 175922

Hi guys
I thought you might like to hear about this. Without getting into
your radio and hacking it, you can do interesting stuff with a standard IC-
W32A. Here is how to do it:
Press BAND and SQUELCH while pushing POWER ON and keep pressing these 2 keys
for at least 5 seconds. Here is the receive range you get on the 2 parts of
the display. You alternate between the ranges bypressing the BAND button.
Right side of the display:
Band one : 10 NOAA weather channels.
Band two : 108.000 to 135.995.
Band three : 136.000 to 199.995.
Band four : 435.000 to 454.995.
Now the fun stuff is on the left part of the display, you get 4 bands but
the
interesting one is the fourth one, here goes.
Left side of the display:
Band one : 136.000 to 199.995.
Band two : 300.000 to 399.995.
Band three : 400.000 to 599.995.
Band four : 600.000 to 824.000.
849.000 to 869.000.
899.000 to 999.995.
If you look at band four, you notice the gaps in the 800 range, that's where
cellular is. But I found out by listening that the 600.000 to 824.000 part
is
in fact the missing part of the 800 band. This means that 624.000 to 649.000
is in fact 824.000 to 849.000 and 669.000 to 699.000 is in fact 869.000 to
899.000. I have heard lots of cellular conversations on that band and
reception is full quieting, which means it is not image frequencies but the
real thing. I found that out by accident, I was just listening to that band
when I heard cell phones everywhere. What I don't know is what the 700.000
to
824.000 part gives you. Hope you like this discovery. It sure beats hacking
into your radio with a microscope. Have fun.
73 de Mike.

SONY TC-560 E.S.P. Auto Reverse Reel to Reel Stereo Deck

Unusual Feature--A Full Sized/Featured Deck That Can Be Run Off of
12 Volts D.C. For Auto Use With Adapter (Not Included)

3 speeds 7.25 Inch Reels

Dual Play Selector Forward or Backward in addition to stop, fast
forward and fast reverse

- Noise Suppressor Switch
- Speakers on/off

Control Knobs For:

- Mode
- Base
- Treble
- Left/Right Volume

Selector Buttons For:
- Tape
- Aux
- Tuner
- Phono

Record Controls:

- Dual Level Meters
- Record buttons
- Mic/Aux L/R knobs (two)
- L/R Tuner knob (one)
- L/R Phono knob (one)

Auto Reverse On/Off

Unit from what I can see needs some minor repair/TLC. I do not
service them. It plays fine, however the following needs to be
addressed.

1. The tape digital counter is not working (probably needs new
belt that connects the mechanical digital counter to the
motor/reel mechanism).
2. When the unit is put in reverse the motor is heard, but
nothing happens. This again is probably an adjustment or need
of a belt.
3. One fascia philips type screw is missing from the deck's

cover.
4. The dust cover or case cover if you want to term it that is of the unit is missing.

Asking $75 or best offer, plus shipping and the actual cost of an inexpensive box purchased from the local box supplier (I make no profit on shipping or the box). You see I have a tough time trying to find larger boxes which this unit requires.

Wish consider a tube tester in trade like a Hickok (e.g. model 800, etc.) or military style tube tester.

International buyer welcome.

********* "RARSfest 98" *********

RALEIGH HAMFEST and COMPUTER FAIR

NORTH CAROLINA SECTION ARRL CONVENTION

SUNDAY, APRIL 5

NORTH CAROLINA STATE FAIRGROUNDS

3500 attended last year! Giant, all-indoor flea market, plus plenty
of dealers, contests, meetings and forums, prizes, VE Exams, and
the famous "Saturday Night Social."

Location: North Carolina State Fairgrounds, Jim Graham Building.

Follow the Interstate 40 to the I-440 Beltline around
Raleigh. Take exit 3 - Hillsboro St., and go west
one mile to the Fairgrounds.

Talk-in directions on the 146.64 and 147.15 Repeaters.

Date/Time: SUNDAY, April 5, 1998, 8 am to 4 pm.
(Building opens at noon Saturday, and 6 am Sunday
for dealer/vendor setup.)

Admission: Pre-register: $5 (before March 28). Gate: $6.

Flea Market: Table/2 chairs: $10 (5 or more tables: $9 each).
120 Volt AC: $15 per connection.
Drive-In unloading/loading permitted. Bring your
own extension cords and carts. Sorry, no tailgating
in the parking lot. (See address below for
registration.)

Parking: FREE on site!

VE Exams: Exams begin at 11 AM. Bring Picture ID, original
AND photocopy of license and any CSCE's. $6.25.
Contact Vince AA4MY at 919-676-4697 for VE only.

Meetings: ARRL/ARES, NTS, Army and Navy MARS, ATV, QRP,
Packet/APRS, DX.

Bill Moore NC1L, ARRL Century Club Supervisor
will present a DX forum, and provide DXCC
QSL checking.

WOUFF HONG: ARRL members are invited to take part in the
official Royal Order of the Wouff Hong induction
rites, immediately after the Social on Saturday
night. Are you a member of the Order? How will
you be tested?

-- CONTESTS --

Mobile Enter your HF mobile station.
Contest:

Homebrew Enter your homebrew projects.
Contest:

QLF Contest: "QLF" Now try sending with your Left Foot. Yes,
it's an official "left foot" sending contest, with
the largest "straight key" you've ever seen!

QBH Contest: "QBH"??? Now try sending with Both Hips. You'll
have to see, and TRY, this one to believe it. The
biggest set of keyer paddles you've ever seen!
Grass skirts optional, but may affect your chances
of winning (we're not saying which way your chances
may be affected... what shape are your knees in?)

CA$H prizes for 1st, 2nd and 3rd place winners. Not
enough to retire on, but enough to make it worth
your effort. For contest entry information, contact
Rick Merkle KA3PSK at 870-8268, or e-mail him at
ibmrick@aol.com.

General The NC State Fairgrounds hosts a permanent, general-
Flea- merchandise flea-market just outside the hamfest
Market: building. Admission to that flea-market is FREE!

Nearby Blue Ridge Cinema (14 screens, $1.50 tickets) just
Entertainment: down the block. NC Museum of Art just up the
block. Crabtree Valley Mall about 2 miles away.

FOR TICKETS For tickets, tables, etc., make checks payable to
AND TABLES "RARSfest." Include your name, call, address,
and S.A.S.E !! Mail to:

Wilbur Goss WD4RDT
SASE REQUIRED! 4425 Watkins Rd. SASE REQUIRED!
Raleigh, NC 27616

Advance ticket cutoff: March 28.

********** SEE YOU THERE FOR OUR 26TH YEAR *********

4033. IC-745 & Power Supply Size?

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-14 00:00:00 UTC
From: Mike Jordan <mjordan@europa.com>
Message-ID: <6ed2ii$sr2$1@usenet85.supernews.com>
Source record: 175927

I am looking at a IC-745 that does not come with a power supply. The local ham store said the IC-745 takes a 35amp power supply. I have a Trip-Lite 20 amp power supply that I can use if it will work with the radio without hurting it. Does anyone know what the minimum size power supply that can be used with this radio? Is the Trip-Lite a good power supply?

Thanks for any input.

Mike

Yea, its UHF
H34SVU7160BN

the H is for Handitalkie, the 3 is the power level , the 4 is
UHF,(VHF=3), the SVU says the equipment type (like HT600 or MT1000) if
gray, its HT600, if kinda dark charcoal its MT1000
the other numbers in this case are specific to that radio. Used to be
once upon a time these numbers were about the same from radio to
radio. Not any more. The B means its a revision B radio. ALL the
radios end in N.

I cant remember now, if SVU is Ht600 or MT1000. the color will confirm
this. I do know its a Gensis radio. HT1000, Mt2000 etc are now called
Jedi radio.s

Hope this helps. We fix alot of those radios at our self mantained
radio shop. Let me know if I can help.

They don't license anything under 100 watts (except translators and boosters), but they don't allow anything that is not licensed. It's not a loophole. One of the guys who tried that just got fined $5,000, and an appeals court upheld the fine.

I wonder whats next? Will criminals start suing the police for catching them? Will criminals sue their parents for the fingerprints that got them caught? Let's not forget DNA tests, very big in high profile cases so it will be a lager $$ figure. Maybe McVeigh should sue the FBI and the state of OK for all the methods they used to catch and convict him. How long is it going to be before we are sued by someone for turning our TV sets to channel 88? I hope we do a show on this mess, I could stay on this soapbox for hours...

It's called a LaGrange point. There are 5 of them in any two body problem (Earth-Sun in this case). Two of them are Trojan points ahead of and behind the minor body along its orbit. This is where L5 colonies are proposed to be located (in the Earth-Moon's L5 point). They are stable points. The other three are along the axis through the two bodies. One is beyond the minor body. This point is unstable. One is beyond the major body. This point is stable. And one is between the major body and the minor body. This one is conditionally stable. This latter point, L1, is the one used by the Solar and Heliographic Observatory (SOHO), and by the proposed new Gore sat. The gravitational pulls of the Sun and Earth are in exact balance at this point. That tends to hold the satellite in the point. But it can be perturbed out of the point (by the Moon), so station keeping fuel must be expended to keep it there over the long term.

There isn't a lot of merit to the Gore sat idea, however. The view from a geosat is much more satisfactory for Wx watching than from one which is so far out. Since we have enough geosat Wx birds to cover the globe, and since any one of them can be linked to the internet, there's no need

for another satellite to allow people to always be able to view the daylight side of the Earth. About the only charm of the Gore sat is that it can show both the Earth and the Moon in one wide angle view. Whoopee! It's a waste of money and effort as far as I can tell. It doesn't address any really valid scientific issues.

SOHO does address a scientific issue, and gives us advance warning of a flare too, which is economically valuable to comsat operators. Geotail Explorer, which loops through the unstable far LaGrange point, also serves a valid scientific purpose feeding us particles and waves data about the state of Earth's magnetic geotail. But the Gore sat seems to just be for web sightseers. Its one of those "we're all on this blue marble" warm and fuzzy ecofreak sorts of things. All puff, no substance. NASA isn't thrilled about this project, because it takes money away from more scientifically valuable projects like the Deep Space series, the Mars Explorer series, and the return to the Moon effort. But Gore is the chairman of the president's space council, and they can't afford to offend him.

>73 de Mike.

Actually it *is* an image response. The radio has virtually no image filtering
in that range, so the image is as strong as signals on the indicated frequency.
This is common to several current radios, and scanners, which cover this
range.

What are the steps in getting a 100w license?
I'm doing my frequency search now and have sent for the application
papers from the FCC.

Will need to know everything involved.

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #259 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 20-Mar:
-
1. Mir Completes Previously Postponed Wyoming School QSO
2. New ARRL Section Managers to Take Office
3. NLI SM Stages "Monday Night Massacre", Recall Result Awaited
4. NASA Ham-Astronaut Retires from NASA, Mir Veteran
5. VE3VIA, RAC Bulletin Editor, Steps Down
6. Vanity Calls Remain Popular, FCC Computer Remains On-line
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. K5FUV to Replace K8CH in ARRL Membership Services Unit
10. AMSAT to Hold Meeting at Goddard Space Flight Center
11. News Items on Communications Science and Technology
12. "The RAIN Report" from Chicago
13. Special Event Station Calendar
14. Wrap-up of TWIAR Fifth Anniversary Special Event Station W2T
-
Transmission and production expenses have been underwritten this
week by a grant from Greg and Sabrina Stoddard, KF9MP and N9NRU,
of North Webster, Indiana, where "This Week in Amateur Radio" is
heard live via satellite every Saturday evening on the N9UZV
repeater on 224.160 MHz and on 147.445 MHz simplex. Uplink costs
paid to the W0KIE Satellite Network have been underwritten by a
grant from Jack Halem, K6DLX, and the Deluxe Repeater System of
Corona, California.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up to 12.031
GHz. Program audio is on the 6.2 MHz analog subcarrier.
-
```

On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA; at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN; and at http://www.ionet.net/~michaelr provided by Mike Reynolds, W0KIE. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, W2XBS, at 518.283.3665 (packet @ WA2UMX.FN32AW.NY.USA.NA or email kxkvi@delphi.com) or Stephan Anderman, K2SMA, at 518.664.6809 (packet @ N2TY.FN32DW.NY.USA.NA or email sanderman@delphi.com).

G'day Jim
Just a note to ask if you know of any TX mods for the T8. I am looking at buying one but the pickings is pretty slim on 70cm and the ability to use the radio on our 476MHz CB service would justify the purchase of the little beastie. I suppose what I want to know is the ultimate TX range of the little fellow.

PS When repling take the "$" sign from infront of infochannel in the E-mail address

Cheers and 73s

hello Paul
I realise this is not, necessarily, the answer you are looking for,
however, have you considered getting one of those, fairly,
inexpensive, scanners, like those from radio shack, and use it. I
realise this would be more expensive but you would have the
flexibility of what you want plus the ablility to change frequency as
your receiving interests change, eg, a qso on that repeater might
decide to qsy and you would then have the opion, range permiting, to
follow them.
Just a thought.

Thanks for the help folks...

I experimented a touch with the mic, and removed the little black disc that covers the mike and it's been working alot better since. I'm not sure if that was the problem or if I inadvertantly fixed a problem while looking at it. Problem solved as of this minute...

But another has surfaced, but with the newsgroup instead....

I cannot find anywhere on my ISP's news server the FIRST message that Dick sent me regarding the mistaken 212 with the 202. Why could that be?

I'd appreciate any input...

Thanks again,

Steve Weaver

> heard by third parties isn't a equal comparison to looking into other
> people's windows. Using a illegal modified scanner in order to eavesdrop
> on conversations you aren't supposed to be hearing...IS though.

You are incorrect. When a corded telephone is employed in communication with another, the hardline used to establish and maintain the connection between you and the second party is yours by ownership. It is a closed circuit on which a hardware wire tap would be required to eavesdrop, and such a device of course would constitute an invasion of privacy. In the case of cordless or cellular telephones, private circuits are not used to establish and hold the connections. The public airwaves are utilized and it becomes the sole responsibility of the user to guarantee his own privacy. The airwaves are a public trust upon which licenses for usage but not ownership are provided by the FCC. Bearing this in mind, radio frequencies and the communications propagated by them are not and cannot be private. They become public domain and interception is lawful.

Your nonsensical analogy simply doesn't fly. Peering through someone's window involves you invading someone's personal domain in a physical

sense. That is illegal without permission from the owner of the domain. Listening to a cellular or cordless telephone conversation on the other hand involves the interception of signals which pass through your own domain. They are in effect given to you, as no effort is made to prevent them from entering the space which belongs to you. Additionally considering the fact that the medium of transmission is one of public ownership, you cannot require that receivers or their owners be prohibited from intercepting them. Metaphorically this would be no different than demanding that pedestrians walking down the street not hear what you and a friend discuss as you stand on the sidewalk. If you require privacy, either speak in tongues or find a vacant alley.

Encryption is the answer to the cellular and cordless phone privacy issue. By use of scrambling, the public's right to intercept the signal themselves will not be violated. The parties involved in the communication are satisfied because their transmissions are rendered unintelligible to potential listeners. The only reason that scanner manufacturers are presently forced to block these frequencies is because a wealthy and influential cellular industry has seen fit to push such regulations into congress. Less money is spent nudging a bill into law than through upgrading millions of cellular telephones, towers and equipment installations.

> > long as we did not repeat it. It is time to go back to that. This
>
> You can listen to whatever is on your radio. Things change though when you
> make attempts to illegally intercept things that wasn't meant for your
> ears. It's called an "invasion of privacy".

As made clear above, this excuse simply isn't logical. While I may not intend that the public to know there is $500,000 dollars in a suitcase buried in my back yard, I cannot argue that my privacy on that issue has been violated when I state the fact in a public newsgroup. The government cannot post top secret documents on every corkboard in public libraries across America and then demand that inquisitive citizens not look at them. As such, you cannot propagate your private conversations through a public medium and insist that members of the public not listen to them.

> > doesn't get the Democratic scum of the hook, however, since they
> > recorded and leaked a cell phone call to the media. This was illegal all
> > along.
>
> Yeah...maybe we can hook a wire to your phone lines....as "long as I
> don't repeat it"?

If you physically attached a hardware wire tap to his telephone line, which is his property, then you would be committing a crime. What does this have to do with your castigating cellular/cordless interception?

I find it laughable that simple common sense is apparently above your level of coherence. This isn't a moral issue, my friend. The matter

at hand deals with personal communications being conducted in a way that renders them public -- by BROADCASTING them. You are correct in that the communications are private. But exposure of private things makes them public, and you cannot change that.

Well, the market for 2nd class licensees with the 6 month endorsement
has pretty much dried up, most ships are or are in the process of
being retrofitted for GMDSS and this will be largely done by mid
'99. Any Jones Act shipping carrying radio officers after mid '99
will be Sealift command vessels, which receive heavy subsidies and
can afford the luxery of a radio officer. But they'll be history
on commercial Jones Act shipping. Many radio officers who wish to
stay in the merchant marine are in the process of getting deck or
engineering ratings so they can still stay "on board."

==========
I took my most recent exam in April 1997 at an ARRL VEC administered
exam session. The test consisted of the pseudo QSO with the typical
multiple guess questions of QTH, rig, name, etc.

Under this kind of exam, you only need to get a few characters to
guess whether the "rig" is a kenwood, yaesu, tentec, icom, etc.
Similarly, you only need to get a few, or at best, most of the
characters to guess the QTH or name. The call sign is a little
harder.

On the other hand, when I took the 13 wpm at the FCC offices in 1962,
the test text had nothing to do with ham radio, included strings of
mixed numbers and letters, and required 1 minute of solid copy, using
"FCC issue" headphones. I am not saying that this kind of exam was
better, but at any given speed, it was harder than the multiple guess,
pseudo QSO exam that is widely administered today.

Are there any VECs/VE's preparing exams like those used by the FCC
over 35 years ago? I doubt it. If there are, I bet very view
candidates are going to their sessions.

Yes, some amateur do act like cbers. However, many amateurs come from
the cb band where there don't seem to be any operating standards of
proficiency for them to learn from. You therefore have an operator
whose only source of practice training has been from 27 mhz.
This is one reason that I am somewhat against the nocode licencing.
They get their licence then appear on above 30 mhz fm voice and
continue using the operating practices they have learned from 27 mhz.

It would be nice if we could find some way of retraining them in
correct amateur operating technique before they get on the air.

This was one of the advantages of keeping people on cw before they get
more spectrum space. cw operating is much better organized the voice
operting.

Perhaps they should TEACH business economics rather than History or
Physical Education! The problem is, there are what, around 7 or 8
classes a high school student sits through a day, times 4 years, and
other than English and Math (that were taught in Elementary school) what
from High school does anyone ever get to use later in the real world?

A station at that power will most likely only be allowed in the 88.1 to
91.9 band, and you will not be allowed to play any commercials.

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated February 15, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

MARCH 1998

Mar 8 (Sun) - Waukesha, WI. SEWFARS Swapfest. Info: Mary J. Adams, KB9IFF, tel. 414-358-1003. E-mail: mjadams@execpc.com.

March 15 (Sun): Sterling-Rock Falls ARS, Sterling, IL info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

March 22 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. Info: Dave Gudewicz, KB9KDA, 5 Brigantine Lane, Grayslake, IL 60030. tel. 847-223-1088. (Small fest, but usually interesting - AJ9S.)

APRIL 1998

April 5 (Sun): Madison, WI. Madison Area Repeater Association. Info: Jeremy Charles, N9VHT, PO Box 8890, Madison, WI 53708-8890. tel. 608-245-8890. http://www.cs.wisc.edu/~jeremyc/mara/swapfest/

April 19 (Sun) : Stickney, IL. Dupage Amateur Radio Club, Hawthone Race Course. Hours 8 AM - 2 PM. Setup 6 AM. Info Ed Weinstein, WD9AYR. 7511 Walnut Ave, Woodridge Ill 60517 (630) 985-9256 or check the DARC homepage at: http://homepage.interaccess.com/~geirh/ Talk in 145.250. VE testing at 9 AM. Hourly door prizes. All indoor space reserved with a special table pricing offer that ends March 1st. Tickets: $4 in advance, $5 at the gate. Tailgating, weather permitting. Outdoor flea market spaces free.

MAY 1998

May 2 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 3 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $6. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: N9ZNA@AOL.COM. see http://tbcnet.com/~jleonard/hamfest.htm (Nice mid-sized ham-fest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facil-ities - AJ9S).

May 15 - 17 (Fri - Sun), Dayton, OH - Dayton HamVention

JUNE 1998

Jun 7 (Sun), Princeton, IL - Starved Rock RC. info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341. tel. 815-795-2201 (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 14 (Sun), Wheaton, IL - Six Meter Club of Chicago. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

Hi. I'm a still-virgin "ham" with a Tech+ license that I'm afraid might turn to dust before I get on the air.

THE SITUATION: I have a Kenwood TS520 (tubes in final) coax fed to an 80m dipole up 30-40 ft through an SWR meter. Being, perforce, on 2nd floor, I have my rig grounded through an MFJ artificial ground.

THE TASK: To tune up and "get out" on 80 meters! (I only copy about 8 WPM but I'm not skittish about jumping in "over my head.")

THE PROBLEM: In a nutshell, I don't know my what from my wherefore, though I've read the Kenwood and MFG 931 manuals frontwards and backwards. Also, I feel a little hamstrung (no pun intended) by the inability to use voice even for testing on 80 meters. (I've actually considered waiting to get my General (which I'm working on) BEFORE "going all the way.")

THE REQUEST: Could someone familiar with my rig (including the MFJ 931) please walk me through the proper procedure, assuming there really is one. My main fears are (1) burning up my rig and (2) causing electromagnetic chaos on the band.

Thanks terribly.

I have a military background. We answer a telephone by stating that the line is unsecured. I do not even discuss "confidential" information outside of a secured area (ie a public street would be a no-no). Most radio transmissions are encrypted or at least frequency hops. Civilians just do not guard their privacy. Hell, their do not even guard their personal security which is why so many are victims of crime. Privacy is an illusion that we must create. I think that most civilians are just lazy. It takes discipline to have security.

4071. Contesting Trailer

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-15 00:00:00 UTC
From: Murray Lycan <ve7ha@lightspeed.bc.ca>
Message-ID: <350C1E4B.B1B45A42@lightspeed.bc.ca>
Source record: 175816

I have a 33 foot trailer that I think could be useful as a contest station in a fixed remote location up on a mountain, for example. I wish I had access to land for this reason since its value for this purpose is far greater than what I can get for the trailer in dollars.

The trailer is located in the Vancouver, B.C, Canada area. It is an old-timer that we bought in 1996. We upgraded it so we could live in it ourselves. The trailer has a living room, kitchen, two other rooms, plus a full bathroom with sink, bathtub/shower, toilet. The trailer has 2 doors. When we bought the trailer, it was located at its current location and skirted like a mobile home, so I don't know what kind of wheels it has under it. The trailer has been used as a mobile home with permanent septic and electrical hookup and oil-fired Intertherm furnace providing forced-air heat into each room. The furnace was professionally serviced last year. The furnace appears much newer than the trailer itself. We lived through two winters comfortably.

We had a professional plumber completely renovate the plumbing to the kitchen and bathroom. He installed a new hot water tank at that time that is the same size as used in houses so there is endless hot water for showers or baths unlike many trailers. We also installed a new toilet and stainless steel dual kitchen sink with Moen faucet. We had an electrician install a new electrical distribution box including adding 220 volt wiring and plug outlet for a linear amplifier.

Anybody interested?

You gotta be kidding, right?

You like being told what you can and can't listen to??????
I thought that social experiment failed.

I don't listen to phone calls, etc...pretty juvenile stuff, but support the
right to do so, if confused enough about life.

While I agree that CW ops are bit more up on their operating skills
and so forth, you must admit most CW ops are more disciplined as
individuals anyway. Much of the problems that we are seeing have
been committed by individuals that have made it Advanced and Extra
class. I think that social class and education are more of an

indication how one will behave. What has happened is that our working class values have fell apart. People now see individualism as a goal not what helps everyone. CW training will not improve an asshole.

I am expecting the environmentalists to call for restrictions on those who do not have post high school training. Limiting who may vote, ownership of guns, licenses, even how many children you may have. We are seeing the beginnings of this in the anti smoking movement as most smokers are in the bottom fifth of society.

As opposed to getting drunk and getting to fights. As to being
filled with anger at society. Being in a constant stage of rebellion.

SB DX @ WW $OPDX.348
Ohio/Penn DX Bulletin No. 348

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 348
BID: $OPDX.348
March 16, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA2MOE, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4GN, K4VUD, W5AJ, K7BV, KH7U, KL7JR, N0AH, Guam Contest Club, DL3JSW, F6AJA & LNDX, G4BUE & DX News Sheet, IK1WVQ, LA7EHA, OM3JW, UN7FZ and VE3NQK following DX information.

3A, MONACO. Tony, IK1QBT and Mauro, IK1CJO, will be active again from the Principality of Monaco in April. They will sign 3A/IK1QBT only on CW and 3A/IK1CJO only on RTTY. No word about SSB was mentioned. QSL via the bureau or direct to homecall. Meanwhile, look for Luc, I1YRL, and John, IK1SLP, to be active March 28-29th, as 3A/I1YRL and 3A/IK1SLP. Activity will be on CW/SSB all bands including the WARC bands. QSL via I1YRL.

3W, VIETNAM. Coly, 3W5FM, was heard begging (yes begging) on 20 meters CW. Check around 14007 kHz beginning 1330z. Also check around 2300-0000z. Also, he can be heard daily on 160 meters (1826 kHz) around his sunrise. QSL via UA0FM, P.O. Box 66, Vladimir City 630011, Russia.

9N, NEPAL (160 meters activity coming!). Charlie, K4VUD (recently active as 9N1UD), reports visiting native Nepal ham Satish, 9N1AA, who is nearly done with his newly built home in Kathmandu. Once completed, he will have the capacity to be active on all bands and all modes by the end of the summer (July/August). His station will consist of a Force 12 tribander donated by the Northern Califorina DX group and other donated rigs, coax and fittings. He has permission to go over his neighbor's property with a 160m wire antenna.

9U, BURUNDI. The "DX News Sheet" reports that Andy, 9X0A, is active every Tuesday until the beginning of April as 9U5/9X0A on 20m SSB QRP. Check 14195 and 14292 kHz. QSL via home call RW3AH.

AH2, GUAM. Members of Guam Contest Club report that they will be active in the upcoming 1998 CQ WPX Contest to become the Oceanic leader as a

Multi-Single entry. Operators JG3RPL/N1BJ, JI3ERV/NH2C, JK3GAD/AL7NC and JH7QXJ will use the call sign AH2R. Guam Island is in Zone 27 and has an IOTA of OC-26. The GCC state their Sunset/Sunrise is 0832/2019z. QSL via JI3ERV. Any questions or comments are welcomed and can be sent to GCC's E-mail address: gcc@seo.amagasaki.hyogo.jp

C9, MOZAMBIQUE. "The 59(9) DXReport" has reported that Franco, I4LCK, who recently signed C91LCK, made 10,895 QSOs in 13 days of activity. He was unable to activate Chiloane Island (AF-???). QSL via I4LCK.

CHANGE OF PLANS BY THE OKDX GROUP. The members of OKDX who were supposed to be active this past week from Tonga (A35) had to cancelled because the operators didn't get a visa. Instead, the group changed their plans and they became active from Western Samoa as 5W0VV and 5W0SZ. They will be active from 5W land until March 23rd. It is reported that during their stay, they will try to operate a couple of days from American Samoa (KH8). Their next stop will be Fiji (3D2) from March 24th to April 1st. There is more bad news! The OKDX group has reportedly cancelled their operations from Rotuma Island because a plane is not available for them to fly to Rotuma.

CT3, MADEIRA ISLANDS. Bert, PA3GIO, states he will be active March 26th to April 2nd, from IOTA AF-014 as CT3/PA3GIO/M. Check around the usual IOTA or DX frequenices on 20, 17, 15, 12, 10 meters. QSL via the bureau or callbook address. Bert states that there is a small chance of some 40/80 meters and 6 meters activity.

EI, IRELAND. EA3BOX announces he will be active March 25th through April 1st as EJ/EA3BOX. He will also be an entry in the CQ WPX SSB Contest.

FM, MARTINIQUE. Bruno, F5JYD, will be signing FM5JY beginning March 25th for 4 months. He will be active from 160-10 meters and especially on 12 and 17 meters. QSL via his home call.

H40, TEMOTU ISLANDS (A New DXCC Country!). In a press release by Tim Totten, N4GN, the South China Sea DX Team (SCSDXT) announces that they have extensively studied the new DXCC criteria which will become effective on March 31, 1998, and have found/researched/discovered several potential new DXCC entities. The Temotu Islands, located in the South Pacific, collectively form the easternmost province of the Solomon Islands, an independent country since 1978. Because Temotu is separated by more than 350 km from the rest of the Solomon Islands, it should easily qualify as a new DXCC entity. The SCSDXT has teamed with the Solomon Islands' IARU member organization, SIRS (Solomon Islands Radio Society), in organizing a full-scale DXpedition to Temotu, as well as preparing the application for new DXCC status. The team for this operation includes members from four continents: H44GP, H44GR, JA5DQH, N4GN, N7NG, OH0XX, OH1RY, OH2BC, OH2BE, OH2BH, OH2TA, W6OSP and 9V1YC. In recognition of its new status, the Solomon telecommunications authorities have agreed to assign the previously unused H40 prefix to Temotu for all future amateur operations. This first Temotu DXpedition has been issued the special call sign H40AA. The team will begin arriving

on March 21st and may be found on the air using their individual H44 call signs while making final preparations for the main event. These early operations--including all-band activity in the CQ WPX SSB Contest, will count for DXCC credit as the Solomon Islands under the current rules. At 2359Z on March 31st, the H40AA call sign will be debuted on the air, at which point QSOs will count for Temotu DXCC credit, presuming the application for new DXCC status is eventually approved. The H40AA operation will continue for approximately two weeks. Suggested H40AA operating frequencies will be:

CW: 1824, 3504, 7004, 10104, 14024, 18074, 21024,
24894, 28024 and 50104 kHz
SSB: 1824, 3775, 7045, 14195, 18135, 21295, 24945,
28495 and 50104 kHz
RTTY: 14083 and 21083 kHz

QSLs for H44 "warm up" QSOs (for Solomon Islands DXCC credit) will be via the home call of the individual operators. The H40AA Temotu QSLs will be handled by OH2BN: Jarmo J. Jaakola, Kiilletie 5C30, Helsinki 00710, FINLAND. SIRS has kindly requested that DXers NOT send any cards for these operations via the H4 QSL bureau. OH2BN will reply to H40AA requests via the OH bureau after the initial batch of direct requests are serviced. Further details will be announced in the coming days. ADDED NOTE: All OPDX InterNet Subscribers will receive the complete unedited press release as an additional bulletin.

JW, SVALBARD. Raymond, LA7EHA, and Trond, LA8NHA, will be active from Longyearbyen as JW7EHA and JW8NHA, March 23-25th. Activity will be on 80-10 meters. QSL to home calls.

KH3, JOHNSTON ISLAND. By the time you read this, a very short operation may be on its way. There is a possibility that part of the KH1 team, Chuck Brady, N4BQW; "Mac" McIntyre, WA4FFW; Pat Guerin, NH6UY; Harold Manasco, K4AU; and Joe Young, N4DAZ, will be able to activate the club station at Johnston Island. Activity will depend on whatever time they have between arrival on Johnston and when their plane leaves. It is suggested to look for them on 20/15 meters (possibly other bands) and also check for packet cluster spots. An accurate arrival time is not really known, but they are guessing the afteroon of March 15th or probably the 16th during the early morning. Their plane leaves around midnight (local time) that night.

KL7, ALASKA (USI and IOTA Islands). The U.S. Islands Awards Program club station KL7USI will be active from IOTA NA-041 islands (also several "new ones" for USI program) in Alaska, June 6-13th. Check 14260 kHz for phone activity. Also, look for maritime mobile and RTTY operations. QSL direct or e-QSL at: http://www.eng.mu.edu/~usi

OH0, ALAND ISLAND. A German group consisting of DK6QW, DL3QQ, DF8QJ, DG1YHV and DL6YFB will be active from March 23-31st. The group will activate two stations signing OH0/homecall/P. Activity will be on 160-10 meters. QSL via home calls via bureau.

P3, CYPRUS. The Russian Contest Team consisting of RA9JX, RA9JR, UA9MA, UA9YAB, RA0AM, RV0AR, UA3TT, RZ3TX, RZ9UA, UN7FZ, etc., will be on the air in CQ WPX at the end of March as P3A in Multi/Multi category. The team will be active before and after the contest. QSL via W3HNK.

PJ8, SABA ISLAND. Don, KF4KRZ, has been on Saba signing PJ8DM since February 24th, and will stay through late March. He has made some schedules with Western PA hams on 80 and 40 meters, but is currently suffering from a local QRN problem on those bands. He preference is 20 meters. QSL via home call.

QSL INFO AND NEWS.....
Dennis, K7BV, operated as KP3/K7BV for one day before the 1998 ARRL DX Phone Contest. He used the station and callsign of KP3P for the contest. Please send QSLs for both calls for this period of time ONLY to K7BV.

Ralf, DL3JSW, reports that it is very difficult to get a QSL from Zone 18/19. He has offered to help in retrieving QSLs from Vlad, UA0ACG (Zone 18), and Vlado, UA0LCZ (Zone 19). Ralf reports that both stations are very active, mostly on CW and the low bands. QSL cards can be sent to Ralf via the bureau or CBA. He will then forward them to the two operators in UA0 land. Also, if anybody sends direct with green stamps more than needed for postage, he welcomes the help to fray the costs.

QSLs for the recent 8P9P operation should go via WJ5DX.

T48RAC UPDATE. If anybody wishes to check to see if they are in the T48RAC's log, please check the following WEB site at:
http://www.kwarc.org
Click on DXpedition, and follow the instructions that will direct you to the contest logs. Please send QSL cards to VE3ESE, Don Fisher, at his CBA, with 1 IRC, or GREEN STAMP, with a SAE, or SASE in CANADIAN POSTAGE. All cards sent by bureau will be returned by the bureau.

QSL Manager Ron, AC7DX, reports many cards are arriving for Mark's (KA4IST) KA4IST/KH5 operation. He suggests the following guidelines to help him and you receive a QSL card. Also, he wants to remind everyone that the other KH5K, NH1 and WH1 operations go to other managers, not him. QSLing direct: Cards that are sent direct, but with no return funding or return envelope will be QSLed via the bureau. All direct cards received will be sent back direct if they included the following:
1. A self addressed envelope (SAE) that should be provided.
2. Applications from the USA should have at least a First class stamp affixed or include one IRC.
3. Applications from non-USA countries should include at least one U.S. green stamp or 1 IRC or a U.S. airmail stamp.
4. Only 1 callsign per envelope.
5. Please, NO Foreign currency.
QSL direct to: Ron Lago AC7DX, POB 25426, Eugene, Oregon 97402

ST0, SOUTHERN SUDAN (Future activity, but now DELETED!). The ARRL Membership Services Committee announced on March 13th that both the ARRL DXAC and Awards Committee have voted to delete Southern Sudan, ST0. While the status in Southern Sudan changed in 1983, QSOs made before January 1, 1995, will count for the deleted entity. There are two reasons for that. First, there have been accredited operations since 1983, and that raises a "fairness" issue. Second, the DXCC Desk has processed cards from those operations-many of them onto paper records. Because each ST0 credit would have to be individually checked, it would be very costly for the League in terms of time and money to search and remove post 1983 ST0 QSOs from the records. In fact, it might not be possible to do the job completely and accurately. The DXCC Countries List will now drop to 328. Also, this will probably be the last country to be added to the DXCC "Deleted Countries" list raising the total to 58. Once the new DXCCC2000 rules go into effect on March 31st, no more countries (or entites) will be added (Deletions will simply be removed). By the way, at the same time as the ST0 vote, both committees agreed to make no change in the status of Fernando de Noronha, PY0F, and Kure Island, KH7K.
WHY WAS SOUTHERN SUDAN DELETED? The deletion happend because ST0 no longer meets the Point 1 DXCC Countries List Criteria. There has been a significant political change in ST0. The basis for country status of ST0 where the "Addis Ababa Accords" (which no longer exist), gave ST0 a "distinctively separate administration". The "distinctively separate administration" was dissolved by the government of the Sudan in June, 1983. Even though civil war continues in the Sudan, there is no government in the Southern Sudan. All of the region is under the administration of the Sudanese government.
Lastly, it has been reported that Claus, ST1AP, will be active from the Southern Sudan area as ST0AP between April and September. He is going there on a humanitarian mission. Activity time will be limited and will only be on SSB. Check 20 meters on 14332 at/around 0730z. Depending on where and who issued the license, it should count as the Sudan. QSL via DJ6SI.

TM, FRANCE. The French Bulletin "LNDX" reports to look for some French operators using TM4CQ during the CQ WPX SSB Contest.

VK9L, LORD HOWE ISLAND. Paul, N0AH, informs OPDX that he will be operating from here April 25-30th, as VK9LZ. Pauls states he will be focusing on the WARC bands. Paul admits he is very excited to be going, and he will be using his Yeasu FT-900 barefoot into an R-7000. He is currently awaiting local authority approval to use the R-7000 antenna. Paul will be staying at the Ebbtide Flats which has housed previous DXpeditions. Activity will be on CW/SSB, and he will try to split the time between the two modes. QSL to his home call, N0AH.

VP9, BERMUDA. Next weekend (March 21-22th) look for VP9ANV to be active in Bermuda Contest by celebrating the contest's 40th Anniversary. QSL via WB2YQH.

Would you please explain "working class"? The only people I can think of
that don't work for a living are homeless, on welfare or are independently
wealthy. I know the Democrats (Socialists) throw this term around a lot but
there motive for using this term is to promote class warfare so as to
promote their cause but do you really believe this bull?

Why No COD?

I'll tell you becuase dickweed's like those in this newsgroup, that like to call and say ship it cod and then it get's there and they say I didn't order that! than I stuck with the thing and have to try and sell it. and plus, I a small time company and I don't have the damn captial to go and get the amp and have it shipped to me c.o.d. and then have to ship it to you cod and pray you accept it then hope I get my money from ups... naah, I've done business with doug davis, he can vouch for me, I'm not in this to screw anyone, not like that chris marquis that runs that one page.

I'm honest.

No Curt. But I am concerned. You could be seeing a lot of restrictions
for individuals without a college degree, and it could happen withing
the next few years. The anti smoking campaign is a model that they
use. Attitudes like yours make it much easier for the elitists to
make a case.

It is just a matter of time before there is a backlash against the
excessive freedom we have today. Already the environmentalists are
calling for limits on the poor as to how many children (one only)
they might have. Also calls to limit the right to vote to college
grads. Their excuse is that the working class and the poor consume
to much (look at all the gross, poor fat people) and are not responsible.

All I am saying with respect to amateur radio, is that there are folks
that feel left behind. Many of our problem hams are working class.
These individuals are very intelligent. But they do not have a piece
of paper (a degree) therefore often are not given a chance to be their
best. This results in anger and rude behavior.

There are currently four social classes (three economic classes:
poor, middle and rich). Two classes are educated and the other
are uneducated. The educated classes are the professional class
and the ruling class. The uneducated class are the poor (underclass)
and working. The working class is defined as having a high school
education but limited skills. It is broken down into two subgroups:
unskilled labor and craftsmen (skilled labor: plumbers and such).
In other words, blue collar jobs. The professional class are those
white collar positions: teaching, engineering, technologists, medicine,
etc. What gets confusing is when factories require a college degree to
work on the line!

What is their educational level. I find that much of the paranoia comes from individuals who feel that they have no control. Four years of college usually does give one a broader outlook on life. However, I have seen some real bullshit spread at that level. Black Studies, Women's Studies and environmental science are some the really big offenders.

4094. Transmitter for a serial port

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-15 00:00:00 UTC
From: "Marcus P. Hays" <pico1@worldnet.att.net>
Message-ID: <6ei8as$mdb@bgtnsc02.worldnet.att.net>
Source record: 175839

I was thinking that it would be neat to in some way attach a transmitter to a serial port so that I could write programs to control a radio controlled car. So anyway, I was wondering if anybody knew of somewhere i could get a transmitter like this or had any ideas about where I could look.

Thanks in advance

Marcus Hays

4095. Ham Gear at end of Equipment Listing

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-15 00:00:00 UTC
From: Gar Won Ko <garwonko@email.msn.com>
Message-ID: <uNb4BjJU9GA.314@upnetnews02.moswest.msn.net>
Source record: 175840

Please find below the listing that you requested:

The following is a list of Electronic Equipment, some Reference Standards, and some Ham Gear that are FOR SALE. This equipment is being made available on a first come, first serve, basis.
All operation and service/maintenance manuals as well as historical data pertaining to their certification history and traceability will be provided on items where applicable. No warranties implied. Offers are being considered. Buyer is responsible for all packaging costs, handling and shipping
charges/expenses.

Contact: Dr. Gar Won Ko at (316) 651-5050 or garwonko@msn.com

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section,
0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section.
0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

26.) Hewlett-Packard Model 606A, Signal Generator, VLF/LF/MF/HF/VHF, 50 kHz to 65 MHz, -110 to +20 dBm, 1 microVolts to 3 Volts,

Condition: Good Price: $ 425.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

32.) General Radio Model 1558-A, S/N 134, Octave Band Analyzer (OBA), measures level in 10 octave bands. Manual included.

Condition: Good Price: $ 50.00

33.) General Radio Model 1307-A, S/N 816, Test Oscillator with Model 1552-B Sound Level Calibrator for calibrating item #72 (Model 1551-C SLM) listed above.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

45.) Cambridge "Simpli-Scribe" Portable EKG Machine, Model 0-209445, (Genuine Antique Electrocardiograph),

Condition: Good Price: $ 450.00

46.) Hewlett-Packard Model 5011T Logic Troubleshooting Kit, with Model 10529A Logic Comparator, and Self-Test Card, and 10 Reference IC Cards, carrying case and manual.

Condition: Excellent Price: $ 250.00

47.) Tektronix Model 7623A Display Storage Mainframe, with original manual.

Condition: Excellent Price: $ 650.00

48.) Tektronix Model 7B53A, Dual Time Base Plug-in, with original manual.

Condition: Excellent Price: $ 450.00

49.) Tektronix Model 7A26, (Quantity: 2), Dual Channel Vertical Amplifier Plug-in, 100 MHz bandwidth with original manual

Condition: Excellent Price: $ 350.00 each

50.) Tektronix Mobile "Scope" Cart with slanted top shelf and flat bottom shelf.

Condition: Good Price: $ 95.00

51.) Hewlett-Packard Model 3582A, FFT Spectrum Analyzer, ELF and Audio, 0.02 Hz to 25.5 kHz Frequency Range. Original manuals and application notes from HP. Dual channels, dual memory, averaging, various filtering.

Condition: Excellent Price: $ 3,200.00

52.) EMCO (Electro-Mechanics Corporation), Model 6640 (MFIM) Magnetic Field Intensity Meter with probe and calibrating Helmholtz Coil. Original manual, portable (field) operation.

Condition: Excellent Price: $ 12,500.00

53.) WaveTek Model 111, Function Generator with original manual

Condition: Good Price: $275.00

54.) Realistic 32-2031A amplified speaker, 12 VDC required or 4 "D size" batteries.....$ 18.00

55.) Collins 30 L-1 Linear Amplifier with manual (wired for 220 VAC) (Winged).....$ 650.00

56.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

57.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

58.) Conrac RND-9 monochrome high resolution video commercial monitor (9")...$ 75.00

59.) Astatic UGB-D104 Desk Microphone.....$ 75.00

60.) Cushcraft A4S plus A744 Beam, 4 element, 10, 15, 20 meters with 40 meter add-on.....$ 300.00

61.) Hustler RM-75 75 meter trap.....$ 20.00

62.) Hustler RM-20S 20 meter supertrap.....$ 20.00

63.) Hustler RM-40 40 meter trap.....$ 20.00

64.) Hustler MO-3 straight 54" mast.....$ 20.00

65.) Hustler MO-3 straight 54" mast.....$ 20.00

66.) Heil HM-5-5-K Single Boom Set Microphone for Kenwood.....$ 50.00

67.) Telex Dual Boom Set Microphone.....$ 100.00

68.) E.F. Johnson Model 250-20 Lowpass RF Filter, 52 ohms impedance....$25.00

69.) K0YEH Antenna/feedline Matching Coil, 10 thru 80 meters.....$ 25.00

70.) K0YEH Antenna/feedline Matching Coil, 10 thru 80 meters.....$ 25.00

71.) K0YEH Antenna/feedline Matching Coil, 10 thru 80 meters.....$ 25.00

72.) Assorted Feedline lengths, 8214, RG-8/U, RG-58/CU, etc.....$ Inquire

73.) Van Gorden Engineering Model DL-1 Hi-Q Antenna Dummy Load.....$25.00

74.) QST's from 1959 to present (Full Set).....$ 1.00 ea.

75.) Proax Model 376 Coaxial Selector Switch(5-position).....$ 45.00

76.) Rohn, 25G Tower, 40 Feet, with two heavy duty house brackets.....$250.00

77.) Rohn 1.25 inch diameter, 10 foot mast...$ 10.00

78.) Inverted-Vee, 17-Meters, with W2AU balun and tower side-arm.....$ 50.00

79.) Cushcraft Model A147-11, 11-element, 2-Meter Beam.....$ 75.00

Best Regards,

Dr. Gar Ko (garwonko@msn.com)

I will tell you that if you will tell me why testing for Morse is a good
thing. BTW, I understand they do lots of things different in San
Francisco, and I tested long before that.

Thanks for your concern Jeff but until you rethink credibility counting
for something, I won't be needing your advise.

Hello,

Thanks for reading our "Press Release". We are excited to
announce the Release of "The Original Southern California Repeater
Location Guide". This exciting and most up to date guide available is
now on the Net. With the most complete listings of all Open and Closed
repeaters for 2-meters, 220 MHz, 440 MHz, 1.2 GHz, 6 & 10 Meters in
Southern California, you will see why this guide is one of the most
sought after directory available. Find out more at...

```
Archive-name: radio/personal-intro
Revision: 2.2 98/14/05 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul
Schleck, K3FU, pschlect@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
newsgroups is so that folks who aren't interested in, say, homebrewing,
don't have to wade through messages about homebrewing on the way to read
about Field Day. Posting appropriately is just good etiquette.
```

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserve.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Strange, I can see my neighbors property, and inside their house through
their window while sitting in my livingroom. Am I trespassing while sitting
in my easy chair in my own home?

Also, last time I checked, lightwaves acted like radio radio waves in that
they crossed my property, and through my house if windows are unshaded too.

Let's face the facts, there isn't "a lot of merit" to ANY of
Gore's ideas ... the guy is a lunatic environmental wacko who
thinks he knows everything about science, but doesn't know
from crapola about much of anything ...

In short, IMHO, any idea Gore comes up with, proposes, or
advocates is IMMEDIATELY suspect.

Source record: 175893

```
N2MODification file for AZDEN PCS-7XXX SERIES
-------------------------------------------------------
-------------

While this is not a bona-fide N2MODification, this may be helpful to those
who desire a CTCSS tone while in VFO mode. This will change the preset value
that was preprogrammed into memory.
This is how you do it :
1) Turn on radio.
2) Press F and then PROG (WR).
3)Press the down key 4 (four) times. The display will show 2 00 TONE and TX
will be lit.
4)Press PROG (WR). TONE and TX will be flashing.
5) Using the up and down keys, enter the CTCSS tone you desire to use during
VFO operation.
6)Press PROG (WR) and turn the radio off and then back on.
You now have the tone you programmed into the radio available during VFO use,
as evidenced by TONE being displayed. If it is not displayed, then press F and
then REV TONE to activate it.
For more info, contact LEW W2BIE at AZDEN (516) 328-7501
```

RadioTelephone license even with Radar Endorsment nowadays?
Most U.S. licensed carriers don't need a cw op anymore, and indeed
by the year 2000 if I remember correctly, there aren't supposed to
be any. Of course, ships can still have radio officers, and I don't
know if the Coast Guard has changed the regs for them yet to
comply with the changes.

It should be noted that how an applicant is tested is up to the Volunteer Examining team. They could require for example one minute of solid copy before passing an applicant, or they can try the multiple choice exam. I also note that with CW keyboards, it's quite simple to record let's say 30 exams for one speed, and then just look for 25, 65, or 100 correct characters in a row, in fact it's almost as easy as grading a multiple choice exam. I also note that a properly constructed multiple choice exam, or fill in the blank exam can be more difficult than getting the requisite number of characters correct.

I took the 20 wpm test this last weekend at a local hamfest and it was just as you described. Much different than sitting at long wooden tables in some government office not having any idea if you are gong to get word groups or just letter and number groups. I found it just like having a cw qso. You just had to highlight the hi spots. However that did trip me up on one of the questions. I had copied the correct rig type during the test and then spelled the darn thing wrong on the exam paper. But I passed anyway so it did not matter.

I would like to get a Motorola type belt clip for an HT holster
that I picked up at a Hamfest this past weekend. IT needs to be able to
hold the standard (I assume it is standard...) type Motorola d shaped
piece on the back of the holster, then it goes into the belt clip and
the radio can swivel <sp> but not come out until turned upside down. I
hope that my description is good enough. Anyone that has these and wants
to sell them or knows where I should go to look for them on the Net,
please let me know either via. E-Mail or post it here. Thanks....

If you care about the future of amateur radio, you need to do what you can locally to remove these types of operators from the airwaves. If these characters are allowed to continue trashing the bands, there will be no more amateur radio in a few years. The frequencies are just too valuable and stuff like this plays right into the hands of well-funded commercial interests who wish to take the bands away from us.

(snip of the rest of a very good post for space)

Hi Ray,
At times most of us get a case of short sight. I guess it is just human nature to lump everyone into groups and hams have been lumping bad or illegal operators into a group by referring them to CBers for years. Thank you for bringing it to our attention. Yes, there are many fine CB operators who work within the rules and who do a great job as communicators.

If I have ever said anything that has offended you as a legal CBer I apologize for that and will try not to repeat such.

There are bad operators in all classes of radio services. A lid CBer is no worse than a lid ham.

And welcome to ham radio. Glad to have you aboard.

----------------------
Dayton Activities

Attending the 1998 Dayton Hamvention? Then don't miss out on PACK*BASH!

What?
An event for the digitally-inclined ham, featuring:
* Buffet dinner
* Keynote address by Tom Clark, W3IWI
* TAPR special interest group meetings
* "Birds of a Feather" gatherings

When?
Friday evening, May 15, 1998
Doors open at 7:00 pm; dinner served at 7:30 pm
Speaker and meetings after dinner

Where?
NCR "Sugarcamp" Conference Center, 101 W. Schantz Ave. --
South of downtown Dayton, just west of Main St. (Rt 48).
Maps available on the TAPR web site (www.tapr.org) or at the
TAPR booth.

How?
Dinner requires advance registration and payment through TAPR.
Tickets will be available at the TAPR booth on Friday, though
we strongly encourage registration <before> Hamvention. The cost
is $20.00 per person, tax and tip included.

All amateurs are welcome to attend, enjoy the speaker, and
particpate in the meetings, although only those purchasing a dinner
can eat.

To register, contact:
PACK*BASH
c/o TAPR
8987-309 E. Tanque Verde Road #337
Tucson, AZ 85749-9399

Phone: (940) 383-0000
Fax: (940) 566-2544
Internet: tapr@tapr.org

Visa/Mastercard Accepted
```

Who?
PACK*BASH is co-sponsored by TAPR -- Tucson Amateur Packet Radio,
the national leader in digital communication -- and the Miami
Valley FM Association, Dayton's packet radio club.

For more information (including maps), go to
http://www.tapr.org/tapr/html/dayton.html, or send email to tapr@tapr.org.
You can request information via packet radio at BASH@N8ACV.#DAY.OH.USA.NOAM.

I went to a local hamfest this weekend and paid a lot of attention to the folks there. After all, to listen to this news group at times I should have found only a bunch of very old fat white men looking for all CW only rigs.

Guess I must have been in the wrong place......

To me it looked like the age range was from early teens to folks in their eighties. There were far more of the teens then the very old. I would have guessed the average age for the group as a whole to be somewhere in the forties.

Fat people? A few but there were a lot more skinny folk about. In fact I don't think any of the older folks were fat. Just a few of us mid-range very late forties guys who are just *slightly* over our ideal weight (hi hi)

The one thing I noticed is that nowhere did I see anyone trying to convince everyone else that the only way for ham radio to survive was to get rid of the the code requirement, or, to force everyone to do 90 wpm to get a novice license. It seems most folks were more interested in eye-ball QSOs and looking over the wide selection of swap tables.

I did notice that predominate race of the attendees was white. But there were other flavors about and I especially notice that among the younger hams there seem to be more of a mix. This seems to be a good trend.

I went to the VE exams and there was a very good turn out. There were around 30 people who came in to test. In fact the room was full. Four of us took the 20 wpm code test and two of us passed. They had to run two sessions of the 13 wpm test because they only had 5 headsets. I don't know how many of those passed. They also ran a couple of sessions of the 5 wpm code test. Again I can't say how many passed because I was too busy with my written exam at the time.

I know that two of us got our extra. I know that at least three folks got their advanced. I don't really know about the the rest who were there. Age groups? I would say the oldest were in their early fifties and the youngest in there mid-teens.

The testing environment was very friendly and the VEs were extremely helpful and encouraging. I had only gone in to take my advanced test but decided to go ahead and try for the code just to see how far I had to study. I have only been back on CW for the past couple of months after a 15+ year break from the HF bands. The CW test was certainly not a cake walk but it sure wasn't as bleak as the old days in the FCC office.

I also noticed something I have never seen at a local hamfest. Lucent technologies was there and was recruiting for jobs. It seems that at least a

few companies still take some stock into looking at ham radio as a plus when hiring.

Ham radio is far from dead.

Curt, you rush to judgement. I have passed a code test. I will upgrade. I have been involved in this hobby since 1959. I was first licensed in 1968 as WN9WKU then as KA9UHU. I relicensed in Saudi Arbria in 1991. Plus I have an engineering degree from Purdue.

Curt, I am trying to prevent such a movement from happening. But attitudes such as yours make it easier for those who look down on rednecks, intercity blacks and so forth as people who must be taken care of. We are already seeing such a crack down with smoking and gun control. Do you think it will stop there? All they have to do is take out one group at a time. Such is the central planning thought process as loved at places like Havard.

We, as Hams, have a tradition of self policing. Why can we not remove those individuals that make our hobby difficult? If the FCC will not do it, can we not make a case and take it to the US Attorney's office? I have been involved in government for 30 years at various levels. I know how the system works. Believe me, we can do more. If you believe in self government, then it is our responsiblity to police ourselves.

Nope.

There are several sites that have a complete list of all unassigned 1x2 and 2x1 callsigns, but a callsign has to have been unassigned for a minimum of two years before it is eligible for routine vanity assignment. It is that "duration of unassignment" information that most sites don't have.

Rumor has it you can call the FCC and they will tell you if a particular callsign is available for routine vanity assignment, but I believe they have a limit on how many you can run past them in one phone call (ten seems to ring a bell).

Oris,I would say that I can speak for the newsgroups in saying that we have had enough of your crap. I and the entire usenet community is really sick of your childish ranting and raving. It is obvious you are trying your best to cause hate and discontent on this forum just like you do on amateur radio. It is a damn shame that you do not know how to be a man. If you have such a big problem with me,then come up to me in person at a hamfest and straighten it out. Your continual whining and crying with these fake headers is only demonstrating your stupidity and gutlessness. How you are able to look your daughters in their face at night when you tuck them in knowing that you did not do your utmost to provide for them financially is beyond me. Obviously you fail as a man in that department too.

The previous post as fact is about as false as they come. I enjoy repeaters here in Atlanta,it is the one area in ham radio that you have not started this crap in. Yet. Give the group a break,if you have a problem with me,straighten it out. I'll be at Kennehoochee this Saturday,March 21,all day. That's in Marietta,talk in 146.880- Or you can try Dayton,I'll be there all three days.

Jeff,

I am glad to see that the FCC is still giving out licenses to idiots.

YOUR GOVERNMENT RE: NSA monitors most if not all phone voice and data
traffic from the U.S. to overseas locations, and GCHQ which is the
Britist equavalent of the NSA, monitors OUR domestic phone traffic, and
then turns over the good stuff to the NSA. This is to avoid breaking the
laws about domestic monitoring.

And let's not forget about the nosy people at the phone company who can
listen at random, as well as the FBI. "Oh, doesn't the FBI need a
warrant to do that?" All those "confidential informants" that the FBI
never reveals are really illeagal phone taps.

I could go on, and on, but never ANYTHING on the phone that you would not say in an elevator full of FBI Agnts!!!

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the
box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks
for reading and 73 -
Oris Grim , N3CND , 5591 Jot-em-down Rd. ,
Danielsville , Ga. USA 30633 , phone:

(706)789-3505 , Email: n3cnd@g-net.net -
Feb/19/98 - Ad Number:6975

Most people just throw these rigs in the trash. But Oris has spent hundreds on 811 tubes that he has burnt up jamming 3894.5 and on web space while his young daughters walk around in dirty clothes hungry. He does not work,he make s his wife go out and earn their keep. Want to get Oris to stop posting this crap with the forged headers? Give him a call and tell him what you think.

From: thehamguy@aol.com
Message-ID: <19980316223800.RAA11812@ladder03.news.aol.com>
Source record: 175725

Obviously, you guys want attention. It's not enough that you trash 75m on a nightly basis, you now want to do the same thing with this newsgroup. Tell you what: you want an audience? Fine, you got one? Tell us where and we'll be there. Where you going to be tonight, Oris? How about you, O'Brien? 3950? 3901? 3898? 3894.5? Tell us where and we'll all tune in and listen to you two brawl it out. In return, you agree to keep this nonsense off of USENET. Deal?

I hate to see them trash 75, but they're going to do that anyway. Better they muck up HF than to have them jamming both ham radio AND USENET.

"Eavesdropping" on someone's OVER THE AIRWAVES call is more like
listening to your neighbor'd music blasting from his car or apart-
ment.

Aaa. a man who know how to bring back fond memories to me, during the latter half of the 60's.. I used the novice bands to help with get introduced to amateur radio and to bring my code speed up from 10 wpm, probably more like 5 wpm, to 15 plus. I tip my hat to the novices who helped me get my code speed up.

Unless things have changed, the novice subband on 80 meters is 3700 to 3750. One 40, I think 7100 to 7150. On 15, sorry I don't remember. I didn't use 15.

If listening on the cell frequencies are such a crime the what is it that they are trying tio hide or keep others from hearing? Is it that those that got caught happen to be CONGRESSMEN or is it the DRUG DEALERS that are really running the airwaves? I for one do not see any harm in listening to the phone calls of anybody be because it's there sometimes I will. I can listen in on any cordless phone most of the mobile phones in the 900mhz range but why is it a crime that only cell frequencies are the ones that the GOVERNMENT is afraid for us to listen in on? So tell me why and I will not do it again.

Not at all.

If you and your girlfriend are "doing it" on a public beach, and I'm
sitting there watching the sunset, is that "voyeurism"?

If you and your girlfriend are "doing it" on the front lawn of your house,
and I happen to see you while I'm walking by, is that "voyeurism?"

If you and your girlfriend are "doing it" in your bedroom with the bay
windows wide open and all the lights on, and I happen to see you while
I'm walking by, is that "voyeurism?"

If you and your girlfriend are "doing it" in your bedroom with the bay
windows closed and all the lights off, and I walk up and peek through
the windows as I'm walking by, is that "voyeurism?"

In the case of the latter, absolutely, but in the case of the former
three, absolutely not.

Using your definition, everyone on the planet should walk around with
their heads looking down at the ground, less they become "voyeurs"
overseeing something you are doing in public.

It is this last point, Jeff, that you seem to be confused about.
A public telephone call, on a public telephone network, is usually
sent over a bounded channel (yes, telephone companies also use
microwave and other unbounded media to relay signals, but that is only
CO to CO, not point-to-point.)

Contrast this to a cellular phone call, which is sent over an
unbounded, 'public' channel.

In other words, using a cell phone to have a conversation is no different
than you and a friend having a conversation in a standing-room-only
Yankee Stadium, and 'expecting' your conversation to be 'private'.

>Wire-tapping someone's telephone has been illegal for quite a long
>time. Now ask yourself how listening to a phone conversation
>via a scanner is different from wire-tapping that party's phone.

>Your intent is the same - to spy on your neighbor.

Intent is irrelevant. The difference is in the medium of transmission. With RBOCs, the phone to your house is a pair of copper. Nobody can "tap" that unless they physically connect to your phone line.

Should you expect people to shut off their radios if you make a 2 meter autopatch phone call? Why do you have an expectation of privacy for a cell call and not one for a 2 meter autopatch call?

>It's just a pity that we need such a federal law in place of what
>should be a moral obligation to respect the privacy of your neighbors.

If you want your privacy respected, don't "do it" in a publically accessible medium. Keep your shades drawn, or conversations encrypted.

>If you want the EPCA repealed, then you should also fight for allowing
>unlimited wire-tapping without court intervention.

Wire-tapping is not the same as listening to broadcast transmissions. Furthermore, wiretaps are used in criminal/civil litigation, where certain protections must exist to protect against abuses by law enforcement authorities. This is a marked difference from people listening to their scanners.

The problem with the EPCA is that it sets a dangerous precident in law-making -- if the government can dictate where you can listen using a radio you can make in your own home, pretty soon they will start telling you WHAT you can listen to.

A telephone conversation between two hard wired phones stays over phone lines throughout the conversation (except with digital ong distance satelites). A cellular phone is nothing more than an FM radio transmitter. Listening to a radio signal would be similar to standing on a street corner and hearing two people yelling at each other. In both cases, the person listening never intrudes upon anyone else. Until 1986, the federal laws regarding telephone privacy treated radio-telephones in this manner.
I personally do not sit around listening to cell-phones all day. However, I feel I should have the right to intercept any radio signal passing through public airwaves. The cellular-phone industry should not tell customers that their unencrypted FM radio signals are somehow private simply because Congress said so.

Public address systems like they use for school and company announcements. I was thinking that they would be in the 140-150 Mhz area. I was thinking that someone might have a frequency counter that would be able to find out or people that would just happen to know that kind of stuff off hand. Thanks!

May I interject? The airwaves belong to the public, and last time I looked, a cellular telephone was nothing more than a radio. The cellular industry put one over on the public, stating that a cell phone was as convenient and secure as a landline. Anyone with any technical knowledge of the subject knows that's a crock. The bottom line is if you don't want me listening to it, then ENCRYPT IT!

Well as you can see James nObrain jams the repeters.
Well as you can see James nObrain jams 75 meters.
Well as you can see James nobrain jams everywhere he goes.
Its nice to see that the rest of the amateur community sees
what a lier and theif Jimmy truly is.
Then says he says in so many words he is going to beat people up at ham
fests.
Hey Jimmy bring your gun so I can have you arrested for being a
convicted felon with a firearm. Here in Ga. they sourt of frown on
convicted felons owning guns. So you be sure to bring your gun there
nObrain. Be sure to bring it to all the hamfests. I'm sure you will run
into me somewhere this summer. Be sure to try to beat me up so I can
have you put in jail that is where you need to be! I think you need some
help. Your sick! You need help Jimmy. Jimmy nobody wants you here. Go
away!!
James nObrain needs to be revoked of his ham radio license!

That's an interesting question. A bit broad. But interesting. And it reflects the common misconception that school and real life are unrelated. I have found that in High School, I learned trigonometry, Physics, English Lit. I learned to write cogent thoughts. I learned to calculate the frictional forces of a object sliding downward at a 20 degree angle...A whole raft of things that many in those classes found absolutely uninteresting. And most certainly un useful in the Real World. Hmmmm....

Imagine my surprise, then , when I discovered that by conceptualizing the applied forces, I could drive on glare ice through the hills of suburban St Louis in the dead of winter, and get to work on time everytime....When the rest of the office was mostly empty. Imagine my surprise, when I found that I could estimate within a meter the cable needed for a 100m run, by a quick glance at the coil hanging on the hook. Imagine my surprise when I could apply the wisdom of the ages from some very salient phrases of our greatest writers. And glean further truths from works anew.

Imagine my surprise.

I suppose, then that one might conclude that what is learned in High School or anywhere else is only unuseful if one chooses not to apply it. All it takes is a little attention...and a little imagination.

Imagine your surprise.

With all the trash being posted on here about BARF, The Liberty Net, and several participants on 75, I decided to take a listen for myself. Been spending the evening monitoiring 3950, 3901, and 3894.5. If this is what ham radio has been reduced to, we're all in trouble. Malicious interference, jamming, music playing, profanity, personal threats, death threats, slanderous accusations, pro-Nazi propaganda, etc. What I am hearing out of my Kenwood's speaker makes channel 19 on my CB look like a courteous group of professional radio operators by comparison.

How long before the federal government finally step in and say "enough" and solves the problem by abolishing amateur radio as we know it, allocating these frequencies to other users whom would no doubt make better use of this precious spectrum than these folks are capable of doing.

You can't ignor Cancer.If you do it gets worse. James Obrain dead is a
festering cancer that needs to be cut out. He is a loser and if he keeps
all the traffic coming and going at his house he will go back to jail
and the cancer will be gone. Just thought that I would let you know
about the festering boil in the newsgroup.

James Obrainless you are a drug abusing little boy that can't get his
way. So you spam everyone with your lies. Jimmy when are you going to
learn everybody here hates you and they know you are a lieing pig vomit
drug user. You rip people off with your bad equipment and steel anything
that isn't nailed down. When are you going to learn that the people here

don't like you and know that you are a worthless peice of cat crap. So why don't you sell your computer and get some more drugs. You are a lier cheat and a theif. How are you and your neighbors getting along not to good from what I hear. Jimmy you seem to have a traffic problem. Are you selling drugs again? You know that when they (police) get you this time you will get hard long time. Why don't you get some help? Do you want to go back to jail. What do you miss BUBBA? Jimmy you can tell us did you drop the soap and liked it is that why you want to go back? The way you are acting is that you want to go back to BUBBA and all his friends. Just keep it up Fat Boy thats where you'll end up!

> and let me know. Thanks!
Every HT I ever used when plugged into the cigarette lighter adaptor would get pretty hot on the 5 watt setting after about a 10 minute QSO. One of the HT's I used, a Kenwood 215A, had a belt clip on the back, I found a heat sink at a HAM fest that would allow the HT's belt clip to slide right into it pressing the heat sink firmly to the chasis of the radio, this worked very well, the heat sink absorbed with fins absorbed the heat very well and kept the radio fairly cool. Looking straight down on the heat sink it looked sort of like this:

```
__________________
//||\\ //||\\
^
|
```
The HT would slide between the cooling fins.

```
______
|____| <--HT
```

The chasis of the HT between the fins, the belt clip would go over the top and back of the heat sink holding it firmly in place.

I then would use a speaker mic while I was driving and have a mag mount antenna, so the HT was almost like a mobile radio. This set up worked well and kept the radio cool.

I am using a Kenwood 22A now with no speaker mic, this radio also gets pretty hot, I open my window(wing) and hold the HT in the cool breeze while listening, and only bring it in when I transmit, the air keeps it fairly cool and I tend not keep the radio keyed real long, never time out the repeater, heheh, because that little HT can start burning my fingers and I have to put it out the window again, hahah. It is a great little hand warmer in the winter though! :)

Hope these tips help, they work ok for me. :)

Good points on the SWR, a bad match and my radios tend to get hotter, but mine
get hot even with a 1.5:1, I think they were designed to run with the battery
voltages, and when we use the 13.8volts off the car, well, it is pushing the
those little HTs and after a long QSO, they tend to get pretty warm.

Excellent point on the SWR. :)

It's a rather long and involved process, although there are over a hundred "first-come-first-served" allocations already available. The only problem is that they are all in scantly populated areas. You should have a competent consulting engineer who regularly practices before the FCC, as well as a good communications attorney. Here are a few suggestions on where to find them:

http://www.sbe.org/hotlinx.html

http://www.radioinfo.com

http://www.nab.org

http://www.commlaw.com

Lots of others out there as well.

A minimum allocation in the commercial band is for a Class "A", or 6 kW @ 100 meters HAAT. You don't need to run that much power, but you must have enough separation from other existing stations not to cause interference with that amount.

Good luck!
Ron

Too bad MOST schools don't have a class like this. One school, and one
class during an entire day, does not change the status of American
Schools in general. Wood shop however is of no use. Nothing is made in
this country anymore, especially out of wood.

You have details of this, Toll Free? And what qualifies as a "big bust"? I have several recent news reports showing fines of $6,000 for interference to Amateur Radio operations. Do they qualify?

Hi all,

are there any good tables available showing correctly calculated
great-circle routes and antenna angles between points on the earth ball?

Well, you may say that many/most ham radio antennas have a beam width
of about 30 degrees and that therefore much precision may be not
necessary, but does this really count for all hams?

What about those e.g. running stations with low transmitter power?
What about distances not only DX but let's say medium distances,
aren't correct great-circle routes needed there to get best connections?

It's not that I'm a ham at the moment, it's only that some time ago my
son has been interested in radio amateur dx and that from then I have
had some ideas to setup great-circle route tables with dense points
(close together). My question is whether this would make sense and
whether hams are interested in such a thing?

Comments and feedback welcome.

Have a nice day

Michael

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the
box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks

It is all true. You seem to have a problem with the truth. The fact that
you would spend money on ham gear and Internet fees while your daughters
walk around hungry in torn and dirty dresses is a well known fact in
Danielsville Georgia. According to the case officer at DEFACS,you will
probaly lose your daughters. The fact that you jam 75 meter frequencies
with music and recordings is also well known. The Fact that you have
been spamming and tying up this newsgroup with YOUR childish trash is
also well known and proven by your previous post where you call yourself
"Chris". Cyberkit easily traces all this trash back to the smartcom.net
IP address. The fact that you sit on your rear while your cross-eyed
wife struggles to carry your family on her back is also well known. You
are a lazy,unemployable,spamming,qrm'ing,and child-neglecting scumback.
Sometimes the truth really hurts. I would get on the radio today and
give you the chance to qrm me but I'm going to work today,I have a
family to provide for. Unlike your lazy,slovenly, self.

4186. Oris too Lazy to support his family,Cross-eyed Suzy has to do it all

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the
box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks

for reading and 73 -

Most people just throw these rigs in the trash. But Oris has spent hundreds on 811 tubes that he has burnt up jamming 3894.5 and on web space while his young daughters walk around in dirty clothes hungry. He does not work,he make s his wife go out and earn their keep. Want to get Oris to stop posting this crap with the forged headers? Give him a call and tell him what you think.

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the

box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks
for reading and 73 -
Oris Grim , N3CND , 5591 Jot-em-down Rd. ,
Danielsville , Ga. USA 30633 , phone:
(706)789-3505 , Email: n3cnd@g-net.net -
Feb/19/98 - Ad Number:6975

Most people just throw these rigs in the trash. But Oris has spent hundreds on 811 tubes that he has burnt up jamming 3894.5 and on web space while his young daughters walk around in dirty clothes hungry. He does not work,he make s his wife go out and earn their keep. Want to get Oris to stop posting this crap with the forged headers? Give him a call and tell him what you think.

Dear Ray:

Let me welcome you to Amateur radio. Congratulations on getting you ticket, and on your responsible attitude toward operating your equipment. I hope we will be able to chat on the air, one of these days!

Meanwhile, I urge you to ignore comments from individuals like N3CND, whose motto seems to be, "Ready, Fire, Aim!" Most of us are glad to see additional folks joining our hobby and we will do whatever we can to welcome and help newcommers.

Some of our best hams "cut their teeth" in the Citizens Band radio service. Your 20 years of experience will be a valuable asset in ham radio. As for grouping all CB operators together in a negative sense (as folks seem to do), it happens to hams, also. Generalizations always are a bad idea and are seldom accurate. If someone has an negative attitude about a person or group, it's easy to tear down anything they say or do.

Hang out with the positive folks, and avoid those with "crappy" dispositions. And when you DO encounter a negative person, don't internalize it and think their remarks are personal. They usually are unhappy with themselves, and just want to transfer it outward so they don't have to face reality.

Best regards,
Paul K5PF

Thank you, Paul. For most of us, our fascination with this hobby began in front of a small Midland, Kraco, Hy-Gain, or Fanon Courier (remember those?) CB radio. And, if the truth be known, some of us still even enjoy an occasional QSO on 11 (heaven forbid!)

I tried to make the same point. I have been involved with amateur
radio since 1959 and have been active in politics for the last 30
years. All it would take is for one congressman to want to use this
as a compaign issue and we are finished. Look at HR2369 and other
legislation. Could you see some committee chairman calling these
idoits in front of congress to explain themselves?

One of the reasons I point out that much our problems are more of
a social nature is that this resembles what is happening in other
areas like gun control. Brutish behavior looks to the media like
a bunch of uneducated rednecks. I do not want Ham Radio to come
under attack like gun owners are. Plus I see a real attack forming
against the working class folks, that is anyone who does not look
and act like the professional class (ie college professors).

I have a gut feeling that if a study was done, we would see much
of the bad behavior (acting like "CBers") to be class oriented.
Our society has not helped those in the lower classes and generally
looks down on them. I know a lot of folks in this situation. And
they are VERY fustrated and angry. Many are intelligent and can not
see why they can not get ahead without going to college.

We had a "gentleman" in northern Indiana. Did all sorts of jamming.
The best was buying a TV, modifying it to jam a local repeater then
returning it for a refund. The new owner jammed the repeater whenever
he used the TV. Now that is one smart ham. Is he being used to his
fullest by our society?

Well Jimmy put on quite a show this past weekend on the local repeaters. He was so intoxicated that he was swearing & using the most vile, foul language even against his own friends!

The man truly needs to be removed from the air waves. There are children listening on weekends, and we don't need a mental case like O'Brien broadcasting all the obscene filth over the repeaters.

Go back to 10-4 good buddy land Jimmy! Geeze, give us a break! We don't want to hear your filth on the air, it was bad enough listening to you on 14313 & 3894.5, now you've taken it to the local repeaters!

>Schools in general. Wood shop however is of no use. Nothing is made in
>this country anymore, especially out of wood.

I can tell you've never worked in the construction trade. Wood shop may
be one of the few "practical" courses offered in high school which actually
teaches the student a marketable skill that won't be obsoleted in a few
years. (Others are welding, and to an extent, automotive repair.)

Unfortunately, most of the material covered in "practical" computer
and electronics courses will be obsoleted in short order. Anyone still
using, for pay, CP/M software? Probably not, and the same will hold for
Win 3.1 software in a short time. TTL is also going the way of DTL and
RTL, and likely won't be much used in a very few years.

But the techniques of framing a house or constructing kitchen cabinetry
haven't changed much at all in the last 100 years, and probably won't in
the next 100 years either. Wood is wood, hammers and nails are hammers
and nails. Etc. So the woodworker is much more likely to be prepared
for a long term trade than someone taking Lute's course.

I don't want to pick on Lute here, but most "practical" electronics training
has a very short marketable life. I wonder if Lute teaches SMD rework
techniques of soldering. Through hole board assembly is rapidly becoming
obsolete, and point to point wiring practically already is. It is much more
valuable for a worker to be trained to understand electronics on a functional
systems level. What's in the functional blocks changes rapidly, but the
blocks themselves are more constant. If one knows their transfer functions,
it doesn't matter so much how that function is implemented. They can still
understand and troubleshoot the equipment.

Just got to get it off my chest folks. First off, allow me to point out that I'm a middle-class, married, white male who has a family, dog, car payments and is buying his own house. Secondly, I'm a veteran, a college graduate, and work as a computer consultant/repair technician.
Now, I've been a CBer for over 20 years. I got my first CB (still have it, a 23 channel mobile) in the summer of 1977. I've been operating off and on for the past 21 years, doing my best to be a good operator, using my call (KAXN-9546) when it was required, and adhering as much as possible to Part 95 rules. The WORST thing I've ever done to my radios is to tweak them so that output is the most obtainable from the ORIGINAL factory equipment. In other words, I've run with a blazing 5 watts of OUTPUT power instead of the customary 3-3.75.
I don't use noise makers, roger beeps or echo chambers. I HAVE used amplified microphones, but only to make up for poor stock mikes or to make desktop use easier. I prefer to keep my modulation well below 100% and detest the sound of over driven operators. I throw a carrier only when I'm testing SWR's, and listen first to make sure that noone else is using the channel. I operate considerately and responsibly, transmitting only a fraction of the time I spend listening.
I've never used a radio with added channels, and have never operated out of band. When looking at radios, if I find out that it's been modified in ANY way, it's a deal breaker. On 11 meters I operate only type accepted equipment, with no modifications made whatsoever.
I'm also a Ham operater, having been licensed for slightly over a year. I admit that I tend to operate much more strictly by the book on the ham bands. but then again, the hams expect that of me.
What bothers me is that ALL CB operators seem to be grouped together as being disruptive, rude, incompentant or "pirate" operators. That simply is not the case. Whether operators such as myself are the exception or the rule, the point of the matter is that not ALL CB operators are of this type. I resent the assumption that simply because I've been heard on 11 meters that I'm some sort of an outlaw. That's not the case. I work 11 meters because it's convenient, and because there ARE some good operators out there. It as also been MY experience that in certain situations, 11 meters can actually be more reliable than the ham bands.
Example: Soon after I had become licensed, but before I received the procedures for using auto-patch on our club repeater, I witnessed a motor vechicle accident. I tried all the repeaters I could hit and nobody would respond. I tried the simplex call frequency and there was no response. With such a wide band to scan I didn't want to hunt for just anyone one the band. What did I do? Grabbed my CB mike, dialed channel 3 (the local rag-chewing channel) and asked for someone to land-line the local 911 center.
The point is that not all CB operators are jerks, morons and idiots.
By the same token, not all Hams are fine, upstanding, moral citizens either.

As a matter of fact, I've seen some folks at the local hamfests who scare the hell out of me!

Then you don't mind if I walk on into your house and listen to what's
going on and look around either do you? Or are you trying to hide
something and keep others from knowing about it?

Is it worth upgrading to Extra?

Yes, yes, yes!

Besides the 1X2 or 2X1 call, and the VE privileges, there's the fact that you have ALL amateur privileges - there's nothing (legal) that you can't do.

Also, the challenge alone is worth the effort.

>an extra receive filter, I think.
>
>
The TR4CW was an improved TR4 with a 500 Hz CW filter. There were two models made: the "early" model, which had the CW filter, and the "late" model, which had both the CW filter and RIT. They were only made for a short time in the early '70s. To my knowledge the only CW-only gear made by Drake was the 2-NT Novice Transmitter.

The Heath HW-16 and HW-99, and the TenTec Century 21 and Century 22 are the only non-QRP CW-only transceivers I know of - and the HW-16 is actually a transmitter (very similar to a DX-40) and a receiver in the same box with a power supply and control system.

But if somebody knows of any others, please let me know!

To get the CW rig I wanted (100 watts output, sharp filter, bandswitching, slow tuning rate, no AGC, etc.), I had to build it. See Electric Radio for July 1995.

Here is the proper freqs.. YES they have changed.

40 is the same at 7100 to 7150. 80 changed to 3675 to 3725 and 15 it still
21100 to 21200.

The most common are in the 170M area, although many other bands,
including 48, 182, 201, and UHF are, or have been, used. Most PA,
however, is hardwired.

Mark

100w

500Hz CW filters (1 at about 9MHZ, 1 at 455kHz) are standard
You can add a pair of 250Hz wide CW filters, 1 in each IF.
You can add narrow AM xtal filters as well.

Other options are TCXO freq standard & speech synth.

The pseudo variable selectivity doesn't work well, but the filters are superb and don't need any assistance. The notch filter is at IF and is excellent. TX audio is particularly good, and the speech processor is one of the best.

I've had one of these sets for a number of years, and still like it above anything currently available. If you look in a recent (1995-) ARRL handbook, to the end of chapter 14, you'll find the TX phase noise plot of mine, along with a walk-through of the synthesiser system.

Cheers
David GM4ZNX

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the
box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks
for reading and 73 -
Oris Grim , N3CND , 5591 Jot-em-down Rd. ,
Danielsville , Ga. USA 30633 , phone:
(706)789-3505 , Email: n3cnd@g-net.net -
Feb/19/98 - Ad Number:6975

Most people just throw these rigs in the trash. But Oris has spent
hundreds on 811 tubes that he has burnt up jamming 3894.5 and on web
space while his young daughters walk around in dirty clothes hungry. He
does not work,he make s his wife go out and earn their keep. Want to get
Oris to stop posting this crap with the forged headers? Give him a call

and tell him what you think.

> Saudi Arbria in 1991. Plus I have an engineering degree from Purdue.

How does getting a novice license in 1968 make you involved since 1958?did
you stsrt studying for the Novice ticket in 1958, if so you must be a slow
learner. I taught a Novice class once and to the best of my knowledge there

was only one degreed person in it, he is a MD. most of them went on to at
least
General class and a couple of them beat me to Extra, I was proud of them
but
ashamed of my self for letting that happen, I had been General for 25
years,
am a Retired Navy Chief Radioman and rock soilid at 20 WPM code.

Did they teach you at Purdue that that piece of paper makes you better than

someone who does not have a piece of paper from a University, or did you
assume that on your own. You did not say anything about having a Masters,
much less a PHd. Does that mean you have less manners than those who
have a Masters or PHD? Does it mean they look down their nose at you,
as you seem to be doing to those without a degree?

If attending a University is a means of judging someone's character how do
you account for Bill Clinton ? Do you offer his values as a paradigm for
your
Children to follow?

What if they set the limit on voting for someone with a PHD in political
science,are you going to rub elbows with all those blue collar guys and
join a militia
group or are you going to stand by and let those uneducated clods restrore
your rights as guaranteed by ther constitution. I think I would rather put
my6
future on 10 people like that than on a 100 of your ilk.

Hi everyone --

Images of California, New England, and North Dakota has me thinking more about the "Public Netscape Stations" mini-HOWTO. This describes setting up multiple Linux workstations as X clients that cannot exit X and **ONLY** get Netscape for Linux as the application. No other software at all.

It's mainly intended for use at trade shows where you'd want passersby to view a website you are serving from a locally networked Linux web server, without having any unreasonable privileges on the network.

A string of four or five of these all networked to one Linux server with AX.25 seems like a great way to get family NTS traffic out of such crowded shelters quickly and easily. People could line up to use these terminals, and fill out a web-based form with all the required information (recipient's name, state, phone number and message body), and have the server automatically forward the messages out for handling via packet.

Has anyone tried this yet, or even built any Perl scripts for such a process?

Having never staffed an emergency shelter, I'm only guessing at how much outgoing message handling actually takes place. I would think that if a family had to leave their home just with what they were carrying to go to a shelter, they would welcome a table setup in the corner with a big sign saying "Send free messages anywhere to anyone. Tell your family where you are."

Thank you to all who replied. I'm a tech plus and hope to get the general ticket next time a test comes around to my area. I have one more question: is there any potential for DX on 40 or 80 meters? 10 and 15 do not seem to be hopping, at least not on my rig. Most of my contacts have been on 40. Are there any times of the day or night(such as 5 a.m.?) when a novice might hope to work distant stations on the lower bands?

During the day, 40 is easy to work, but propagation is limited. After sunset, the noise level becomes almost unbearable. It seems to quiet down after midnight, but the hams seem to disappear around that time too. Any suggestions?

Thanks & 73

If they are going to broadcast it into my airspace then I should be able to listen to it. If they don't want me to do that then they should encrypt it in some way. I don't listen to these frequencies, but I feel the same for all frequencies.

If names and phone numbers are being transmited on 2-meters anyway then
being retransmited on 11-meters just does more free advertising for the
people trying to sell things.The best thing to do is make sure you are
on your best operating behavior and they will either be impresed and
join you or get bored and leave you alone.What they want is a response
from you,don't give it to them.AB7RS

> work on the line!

Hi Greg,

I wonder where I fit into the class spectrum?

I'm an electronic tech for a small Motorola dealer. My education has
come from a variety of sources - the usual high school electronics
courses, nine years as an avionics tech and instructor for the US Navy,
miscellaneous community college courses, and the neverending pile of
trade/tech literature I plow through to stay up to date.

I'm the senior of two techs working for the company, which means that
the desirable work is mine if I want it. Working up coverage maps and
doing site studies falls in this category. Of course, since I'm half
the tech team I find myself on the unpleasant jobs, too. Pulling cable
through hot, dusty crawlspaces and installing radios in garbage trucks
on steamy summer days are but two examples. The former appears to be
professional work, the latter certainly not.

If you had to pigeonhole me, where would I fit in? I'm not trying to
put you on the spot, by the way. It's a question I sometimes ask myself.

73,
Rick K0MGY

One item that's common among you folks obsessed with eavesdropping on your neighbors - when you can't debate an issue, you resort to name-calling. I must have struck a nerve, eh?

>I could go on, and on, but never ANYTHING on the phone that you would
>not say in an elevator full of FBI Agnts!!!

That the government might be monitoring phone calls doesn't bother me in the least. Individual rights has to take a back seat to national security, in my opinion. Feel free to disagree in an intellectual manner.

Better re-think that statement. (Consider light as E-M waves.)

>I'm going to laugh when they come into your house and take all of your ham
>gear claiming you can't listen to anyone.

Not likely. There are two broad categories of radio hobbiests - those
licensed to transmit, and those who can only listen. You might fall
into the latter category. That's fine - when I was young I was a listener,
having built a shortwave radio - that's all it took to get me studying
for my license. Now, unlike some scanner enthusiasts, I don't sit for
hours listening to my neighbors' phone calls, but rather carry on 2-way
communications with other amateurs around the Pacific. Anyone is invited
to join in (that's called a "round table" - three or more hams); no
eavesdropping takes place as we're all part of the conversation.

Hopefully, you can join us some day!

I have spoken with FCC engineers, one at the local FCC office and one at
a monitoring station, and they both stated that the FCC would not
consider it intentional interference if hams used the frequencies these
illegal operators are using, even with the intent of causing them
intereference to run them off. They statement was that since they are
not licensed to use the amateur bands, then you will not be considered
to be causing them interference. They said, "do whatever you think is
necessary to discourage them from using the band."

And in most cases, they're getting better grades than the 18-22 year-olds.
They know what the working world like without a degree so they come to
college with a motivation that the younger students rarely demonstrate.
Colleges recognize the benefit of having such "non-traditional" pupils,
and offer evening and weekend classes so these adult students can continue
working at their job to support their family.

My best students have always been adults, despite the disadvantage
they bring with them of having been out of school a decade or more.

If someone next door is standing in front of an open window naked as a jaybird, they have given up their right to privacy. If someone makes a phone call which emits radio waves which pass through my house, my property, and my body, then the person making the phone call has also given up their right to privacy. If someone is burglarizing my house, I have the right (in my city, state) to shoot him so long as it is in the front side of their body. Soon I may shoot them in the back too if they are fleeing (legislation pending in TN). I should have the right to do whatever I want to the radio waves because they are trespassing on MY property and in MY body. The government does not own my property or myself. The day they try is the day of the beginning of the next Civil War as far as I am concerned.

Easements exist for those lines. They are there legally and you have no
right to tape into them.

The law is an infringement on the citizens of the United States rights.
It doesn't even apply to anything but cell phones even though much more
traffic goes through portable phones.

Don't forget that I live in Hawaii - we have the world's most beautiful women on our beaches. (One of them is my very pretty Vietnamese girl-friend.) But just as you must respect their privacy after they leave the beach by not peering in their homes, you shouldn't be eavesdropping on their wireless phone calls.

Looking to Buy/Trade for Autopatch setup that will work with a Radioshack HTX-202 Handheld (at first) and later can be hooked up to a standard Moble Rig (adi-146 50 watt moble rig)

Have Sony Playstation Modification Chips (3 which sell for 10-30 dollars each) and a CD-R which I can burn your favorite Library of information onto (got a favorite webserver? or Dir on cdrom.com?)

and can also pay cash (but extremely broke, thats why I hope to trade something)

Let me know!!

No, and either has the other 99% of the country. People have to go to school, and take jobs where they live. Not everyone in our country can fit into the two or three cities that still produce hand made wood products.

We need to teach the skills required for the jobs that are available everywhere, in every city, and used in everyday life.

Not everyone wants to be a woodworker, nor are there enough jobs in that industry for everyone. This is a skill that can be taught in College or Trade School. High School should teach things that EVERYONE will be using no matter WHAT job they end up with.

How many people after High School have all the large expensive machines at there homes that they used in Wood Shop?? What good is this "skill" if you don't have the tools needed?

It would be just as silly to have a Brain Surgery Class or Slinky Making Class in High School.

in
> > >this country anymore, especially out of wood.

> > The point of teaching things like wood shop is to expose people to
things that they may otherwise never know anything about.I am a machinist,
and if you are like 98% of people in the country you don't know what a
machinist does. One of the reasons for this is it is totally ignored by the
public school system. Believe me, manufacturing is far from dead in this
country. The demand for machinists is so high I can quit a job at 9:00 am
and be working for someone else by 3:00pm that same day. No exageration,
I've done it four times in the last year (bad form I know, but I'm spoiled
).One of the biggest reasons for the lack of skilled machinists has been no
exposure in the public school system. Most manufacturing takes place in out
of the way places, often on the edge of town.The majority of shops employ
15 people or less. There are thousands of these manufacturers all across
the country and because of their small size and lack of exposure to the
general public finding skilled people is a real challenge. By the way, I
personally know several professional woodworkers. And no, I don't live in
New england.

Engineering Express has recently made available ExpressPCB,
a PC board layout editor for Windows95. A fully functional
version can be downloaded at no cost from
http://www.expresspcb.com

Please understand, this is not a hobbyist effort. It has
been developed by a professional programmer, having written
applications for Peter Norton Computing and Symantec. Our
staff also includes an electrical engineer that has a decade
of microprocessor based electronics experience.

Along with the software, Engineering Express has an integrated
PC board fabrication service. Users can layout a two-sided
board with plated-though holes and order it directly from the
ExpressPCB layout editor. The software sends your order over
the Internet to our service. Within 2 - 3 business days, an
overnight courier will deliver your boards. An order for 2
boards typically runs about $95 plus shipping.

Please visit our web site at http://www.expresspcb.com to learn
more about the software and manufacturing service.

Well Hello Hamguy
I have to tell you I'm one of those operators that tries to operate on
3.901. It ain't easy through all the name calling and jamming. If you
will go to my web site you will see what some of us are trying to do
about the problem. If would please write the FCC and complain and don't
be afraid to name names. If you think that the FCC doesn't hear you.
Then you are more than welcome to send me a copy of the letter and I
will post it on my letter page. I know for a fact that the FCC stops by
there regularly. Most of the guys who operate on 3.901 love to sit
around and rag chew. Just like everything else we have that same bunch
come up on the air and Jam cuss night after night. Then we have some
guys that have total disregaurd for other amateur radio operators that
are useing the frequency. We also have unlicense operators who willfully
interfear with QSOs and use other people's callsigns. If more ham
operators what take the time to snail mail a letter to the FCC and your
congressman more would get done. I would like to see some of the jamming
and name callig to stop. On a rare occasion when all the drunks have
gone to bed their are some nice conversations on 3.901. I used to
operate on 3.950 when I lived up north. They just got to radical for my
tastes so I moved on. But there it was the same few guys would come up
and jam night after night. I may not agree with what they talk about but
I belive that suold be able to talk about what ever they want without
haveing to be jammed. 3.894.5 has the same problem its again that same
group of guys that night after night come in there and jam. So if we
could get something dome abouyt that same group of guys i belive that
the bands would be better for all. I also belive that if the FCC made a
example of one or two of them the rest would fall in line.

4277. 10 meters opening wide + outband CB crap

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-18 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6eomej$6p7$1@w3eax.umd.edu>
Source record: 175609

A few weeks ago, in the ARRL DX contests, there was a virtual
pipeline from Maryland to Argentina.

If you needed 250 Argentinian contacts for some award, you could
have gotten it on one band, in one day, at virtually anything
above a watt and a dipole.

The path can also be evidenced by the number of high-power
Brazilian/etc. CB stations who seem to like camping out on
28.005 through 28.050, every 5 kHz.

If you know any of these scab CBers, please mention to them
that there are a lot of people who wouldn't mind if they went
below 28.005.

Trust me, it's not like they don't know we're there.

P.S. The FCC has stated that it's not jamming or interference if
you transmit over a station that has no right to be where it is.

In other words, if you hear a Roger Beep or echooooo, you didn't
hear anything.

Idea for Oris and the other guys who are advertising their 75 meter Web pages on here: how about some sound clips of these jammers? I've heard a lot ABOUT them, but never actually heard the activities of the callsign holders who are being mentioned. How about some audio so we can hear for ourselves?

Hey Scott
Well we have a CB problem here that is a little bit of a different
nature. They run their amps and spatter 10 mtrs from 10 to 15 miles
away. So I can ID with you.
I'm in Ga and Sunday I had a contact on 28.440 in the middle of the day
with a ZL1 station in New Zealand. I'm looking forawrd to 10 meters
being a hot band this summer. I have a HF rig (TS 440s) and 3 different
antennas up for 10-meters. I have a a-99 a 2 element quad vertical and a
4 element yagi horizontial. I also have 10 in the moblie (ts 130 and a
tunned wip antenna on ten). I have high hopes for DX on ten this summer.

I think that a lot of you are missing the big picture. That is the fact that you're expecting privacy from something that isn't at all that private. After all, a cell phone is a radio. The radio waves are transmited in all different directions. Anyone can pick them up with the proper equipment. Yet, we expect the government to pass laws to ensure our privacy instead of going under the assumption that others may be listening in on our transmissions. It's completely different from someone spying on you in your home.

I remember stories of hams that were burglarized because they announced their vacation plans over the local repeater. Caution was not used in what they discussed. Is it so hard to use caution in cell phone conversations? Do we really *need* this law? Have we come to expect too much from modern technology and thrown common sense out the window, and thus expect the government to take the place of our lack thereof?

> a novice might hope to work distant stations on the lower bands?

40M is an excellent DX band, but not for Novice and Tech+ folks.
The 40M novice segment is not particulary good for DX (except for South America) because only in Zone 2 (the Americas) is that segment a ham band. In the rest of the world, amateurs are limited to 7.000-7.100MHz. This means you won't hear any European, Asian, African, or Oceania stations in that segment.

80M is a good night-time band in the winter when storm static is low, but it takes a pretty good antenna to make it work!

4284. Ham Radio "Street Prices" in Japan?

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-18 00:00:00 UTC
From: flanders@groupz.net
Message-ID: <350fe9af.3638012@nntp.groupz.net>
Source record: 175616
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

In the recent post "Re: New Yeasu FT-847. Best price",
<seb@hotmail.com> mentioned that
http://www.hamers.co.jp/webshop/radio/ad/847camp.html
showed the "best price" on the FT-847.

I checked out a bit more on the "Hamers" page. Hamers is apparently a
Japanese web site retailer. Their main web page is at:

http://www.hamers.co.jp/webshop/index.html

The above is an entry page. A more useful menu is along the left side
of page:

http://www.hamers.co.jp/webshop/radio/index.html

Clicking on these 5-6 menu entries gives a pretty good listing of
various ham gear and accessories. It is in japanese, but the
manufacturer's ID or part number for radios and accessories is pretty
easy to recognize. The numbers appear to be Japanese list prices
accompanied by Hamers selling price.

If I am interpreting what I see correctly, Hamers selling prices are
as follows:

ICOM R-8500 134,000 yen
ICOM IC-756 206,000
Yaesu FT-847 168,000 (the new 160 meter to 70 cm transceiver)

And, from page:
http://www.hamers.co.jp/webshop/sw/index.html

ICOM PCR-1000 42,000

The yen was around 130 to the US dollar this morning (3/18). At 130,
the ICOM 756 would cost US$1585 and the PCR-1000 would be $323. The
Yaesu 847 would be $1292. The 8500 receiver, which runs at least $1550
in USA would be $1030! It appears that if you were in Japan and walked
up to the dealer's counter with your converted currency, this is what
you would pay.

Just in case you were thinking of it - no, they don't do mail order
outside Japan.

Sure would be nice if we had a "gray" market in the USA for ham radios
to provide competition for our "official" importers. Such a market
developed a long time ago for cameras.

WHAT is a conversation I'm not supposed to be hearing? Military traffic?
Guess what? No illegal to listen to. Portable non-cell phones? No
illegal to listen to. The only thing that is illegal to listen to is
cell phones because the cell phone industry subverted the people of this
country's rights.

>
> > long as we did not repeat it. It is time to go back to that. This

No, it's called the airwaves are owned by the public and I'm part of the
public and therefore I can listen if I so choose.

You are a loon. Wired lines are private property. Wiretaping without
legal court order is and should be a crime. Only a fool has an
expectation of privacy when he uses his cell phone.

When you peek in your neighbours' windows, I think you are trying to see
them naked. It's going to be hard to see someone naked listening to them
on a cell phone.

> >Since radio began we've had the right to listen to anything as

> Your intent is the same - to spy on your neighbor.
>
> You can attempt to justify your obsession of electronic "peeping tom"
I don't even own a scanner capable of listening in to cell phones. I,
however, own three cell phones and average more than 2000 minutes per
month. You could try attacking me for being an electronic exhibitionist
but that won't work either since I choose to retain my privacy by using
digitally encrypted cell phones where possible.

> but it doesn't change the fact that you're committing a federal crime.
This is only the case with cell phones. If I were to listen to your
portable phone, I would be well within my rights. If you don't want
people to listen in, I think you should keep your RF out of their
private property.

> It's just a pity that we need such a federal law in place of what
> should be a moral obligation to respect the privacy of your neighbors.
>
It doesn't work so it is faux privacy but even if it did, as you can see
there are solutions such as digital encryption. Otherwise, just don't
say things on air that you don't want people to know. I don't say things
online here I don't want people to know. It's really rather simple. Or
do you have something all fired important to hide? Are you a criminal?

> If you want the EPCA repealed, then you should also fight for allowing

I say thats fine, as long as they stay off ham radio until they can operate like adults. Otherwise we need to setup a citizens ham committee with capability to triangulate these hams, record/document their behavior, then petition the FCC to remove their licenses and fine/arrest them if they continue. If the FCC does not act can we make citizens arrest of the offending hams?

Subject: Pirate Alert!!
Message-ID: <dee7f434.350f898d@aol.com>

DXers:

I just received two reports from the U.S. via e-mail of a station signing "7Z5OO" on 40 CW around 0600Z on Wednesday, March 18. Apparently the station had a very large pile-up going on. Well, the fact is, 7Z5OO has been QRT for the past 3 days. This is a PIRATE. Do not QSL 7Z5OO for any contacts on March 18. Guaranteed to be returned.

So, if this jerk continues to bootleg 7Z5OO, how can you tell the difference? Here's how:

1. Operating style - if 7Z5OO sounds like a novice QRS operator, K3UOC is not the operator. If the guy can't handle the pileup, K3UOC is not the operator. This is a pirate.

2. If 7Z5OO is S9+20 in Illinois and S8 in California, this is a pirate. I am not that loud. No way this guy is running the legal limit.

3. If this guy won't tell you his name is Mike when you ask, this is a pirate.

4. Operating time - I have restricted access to 7Z5OO. If I'm on at 0600Z, it's for a major contest only.

Basically, if it sounds bogus, it probably is.

I suspect this pirate is from Zone 22, not 21. There's a guy over there who has been sitting too close to his amplifier for way too many years.

I apologize for the inconvenience.

Mike Manafo

And last time I looked, Army tanks and Air Force airplanes are "public
property" also....so does that mean you can just go "borrow" one when ever you
feel like it?

I agree with the idea of encryption...that's why I've got a digital cell
phone, not an analog one. But, that doesn't change the concept that just
because something is there...that it's yours to use (or listen to) at will.

Message-ID: <01bd52b3$3b2efa40$3209799e@default>
Source record: 175633

hey there pholx,

I have three 1.5A solar cells and want to hook them up to four 12 volt gel cells (that I have lying about) that will be wired in parallel for a total of 48AH capacity (could be increased to 80AH by addition of a fifth larger battery). I'm wondering if I could simply put a diode in line and forget about building a charge controller. Or should I build the multistep controller? Two of the three solar panels are in great shape and the third seems to be ok, not sure if it'll produce at its rated amperage though (the epoxy the cells are encased in is yellowing. Off the cuff I'd say 4.0AH in full daylight will prolly be the maximum I'll likely get out of the three. I'm not that concerned with extreme longevity of the gel cells (picked em up cheap at a swap fest).

any ideas what I should do?

Would you please give the exact citation and entire text of the FCC's "statement" referred to above ? Somehow I find it hard to believe that they would condone intentional interference with any communications.

For someone so "into" ham radio who is always touting his efforts to help the hobby (it is just a hobby, by the way) grow, you sure seem to want to encourage nasty behavior by its current participants. Now *that's* the way to win friends and influence enemies (apologies to Dale Carnegie). NOT!

Someone gave me some advise when I was deciding to go from straight key
to a paddle. If you are right handed, learn to send with your left hand.
Then you can keep the pencil for logging in your right hand. No putting
down the pencil and reaching for the key before sending.

As others have said, sending is a matter of balance and finase. Once you
develop a feel, you should never experience fatigue of the fingers or arm.

say brah...wassamaddau

dis malo idea yours get plenny
stink-talk no

national security is the excuse brah.
always a committee of well-trained
paranoina=laded minds to trump up
"security" kine...

government afraid it being found out...
and then press gets hold of it and
then they get voted out...wiki wiki

look at Lindsey case...dat broad
has her own "security" needs: not to
get found out...she get found out...
but continues her "dictatorial ways"/

moah bettah u learn "freedom" is
being allowed expressing what comes
to mind...no one has to be arrested
for being with thought...no matter
how many people in power get known
for what they do...at taxpayer's
expense.

I guess u say that paying 1.66 per
gallon a national security issue
brah in da kine...gas companies
refuse to "speak" about it...why
is never discussed fully. Their
national security...

taking lands away from da kine
up Leeward side because of State
Security excuse: they had no toilet
facilities on their encampment...
homesteaders...local kine.

national security usurps freedom.
on all levels...it's
how tyrants stay in powah...

bill conduit
etc.

4309. Re: Congressman Sues Over Taped Cellular Phone Call

Source record: 175641
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc,alt.rush-limbaugh,alt.fan.rush-limbaugh

From the beginning of radio until Congress got mixed up with cell phones, it was perfectly legal for everyone in the US to listen to any radio signal they wanted. The military expects adversaries to be able to listen to their radio transmissions. They either use radio silence or some means to make it difficult for a listener to understand what is being said.

What Congress should have done was require cell phones to have some type of scrambler circuit. In the massive quanties in which cell phones are manufactured, a custom IC would only add a buck to the price of each phone. But a buck per phone is a lot of money, so the cell phone lobby went to Congress to outlaw listeners.

Privacy on analog cell phones is rather like having a picture window with no curtains in the bedroom!

I don't own a scanner, but I think everyone who does or who considers owning one was delt a great disservice. As was anyone who was fooled into believing the anti-scanner law would give them privacy.

Disclaimer:
These are my personal opinions.

Hi Rick,

As far as I'm concerned your every bit as valuable as any "Professional" that I've ever met. Those of us who actually produce a physical end product are grossly under appreciated and equally under paid with respect to "Professionals". Ever see a "Professional" remodel an office building? Nope.. We just get our fucked up drawings from them and then have to redesign on the fly anyway. Just my most humble opinion as usual.. :-)
Mike Burch K8MB and Master Electrician & proud as hell of it too.

And 90% of those posts, especially the "technical" ones, are so inaccurate it is laughable. No other group makes up their own theories and then claims that all the rest of the world, the experienced engineers, technicians, and other knowledgable people who back things up by research and fact, and the books they write about it, are all wrong. Just read the posts about coax length and swr, modulation, amplifier class, ect., and it is pretty clear what gross mis-information abounds in the cb world. Of course lots of people post there, they can make up anything and state it as fact and the rest are so stupid they follow along. If you want to post on the ham newsgroups, you need have to have at least a smattering of knowledge of what you are talking about which leaved the cb types out. Most of those topics would not even warrent a response on the ham news groups, but the cbers can go on and on and on and over and over and over.

4315. TERMALINE COAXIAL RESISTOR "

Glad to hear it. So what's the problem?

>The only problem was, we had some jerks who were playing (nothing new
>here). Still, it does present some problems when a few bad apples make
>life hard for the rest of both the amateur and cb communities..

And what terrible crime might these "jerks" be guilty of?

>Basically, what I am talking about is the deliberate retransmission of
>the 146.940 swapnet on the 11 meter cb band (specifically, 27.365 lsb).
>The retransmission included names, callsigns AND phone numbers...

So what? If the participants didn't want their phone numbers made public, they
wouldn't have given them out on 2 meters in the first place.

>Now, I don't know if anything can be done about this, and frankly, I
>have given up any hope that an equitable solution may be found...

Why should anything "be done about this?" Hell, if anything, you should be
grateful that someone is giving added and additional exposure to your cause.

>Perhaps its time we just started policing both bands with vigilance

Oh boy, here we go. A blind guy is gonna threaten to take matters into his own
hands and clean up the bands. Don't make me laugh.

>
>The only real bad thing about all this is, I heard several hams on a
>local simplex frequency commenting about how they "raised a ruckus" with
>the cb'ers. Some of these guys are extras!

Sounds like the problem then rests with your ham buddies, not the CBers.

>What I'd like to know is why they would even consent to behave in such a
>fashion (much to the discredit of the ham community). They basically
>make all radio operators (whether they be ham or cb'er) look bad.
>
>Oh well, I leave the commentary up to the rest of you..
>
>Thoughts anyone?

Yes. You worry too much. Enjoy life and quit trying to find a solution for a
non-existent problem
.

Ignore this fool Casey. This is the same fool that posted to all the
Canadian newsgroups..."why is it the white people control the world"
This fool is obviously 4 or 5 cards short of a 1/2 a deck.

Maybe to answer his troll...No cutie boy aka code sucker aka M@S@ aka
fool, maybe only you should die. Funny how the Canadians responded with
death threats against him. Maybe they know something about this fool we
don't. A "classmate" of this fool reports that cutie boy is what is
referred to as a troublemaker and is reportedly been asked to either take
all references to McGill University out of his posts or be asked to
leave. HMMMM, guess this doesn't give any credibility to those who took
to defending this fool's poor english as a problem in language
comprehension. Looks like the little fool comprehends A-OK, he just has
taken up the wrong people, like the other two fools, The CB Dimbulb and
his not so alterego Drew Durigan

>Wire-tapping someone's telephone has been illegal for quite a long
>time. Now ask yourself how listening to a phone conversation
>via a scanner is different from wire-tapping that party's phone.
>Your intent is the same - to spy on your neighbor.

The intent is not quite the same.

One method is intrusive, the other is not (or actually intrusive in another way).

In the case of wiretapping -- I have to have physical access to the wire. If the wire does not cross my property, I would have to tresspass in order to apply the tap.

Also, conversation along a wire isn't broadcast, it travels along the wire to the destination. Wiretapping requires I physically attach equipment to physical objects that I normally do not have access to.

In the case of listening to a broadcast conversation -- in this case the radio waves are crossing through space I control.

It is similar to the difference between tresspassing into your neighbor's yard in order to put your ear against the window in order to hear a whispered conversation -- in which the participants have a reasonable expectation the conversation will not be overheard, and sitting in your living room with the window open listening to a shouting match in your neighbor's house.

Yes, you could close your window and not listen, but you are under no obligation not to listen -- whereas you ARE under an obligation not to tresspass and listen to a whispered conversation in which you must take extraordinary actions to overhear.

In the case being discussed, the person was listening to a legal police scanner, and the radio waves impinged on the scanner and were reproduced. If you don't want conversations overheard -- either don't broadcast them, or use a technology that scrambles and encodes the broadcast so that only the intended recipient(s) can decode it.

This right was moved from the government to the people when the
government asked the people to allow it to regulate and sell access to
their airwaves. This law is theft of a right of the people and is wrong.
I couldn't care less about personally listening to cellophane
conversations. I don't own a scanner that can pick them up. I own three
cell phones and talk for about 2000 minutes per month, so I'd be the one
being listened to.

Hi all,

Sorry if this question has been asked to death, but there is to be an air show at Davis-Monthan AFB here in Tucson this weekend (3/21-3/22) and the Navy Blue Angels will be performing. I was wondering if anyone out there knew the air-to-air VHF frquencies the Blue Angels use.

E-mail responses to the address below are prefered because of the short timing. Thanks!!

Robert

There is a big difference between off-the-record verbal remarks from an FCC employee, and official policy of the commission as represented in written proceeding, NPRM, CFR, etc. While I am not disputing that several individuals may have said this, their casual remarks cannot be considered as the "FCC states that".

However, if you can provide a written reference to this policy in one of the commission's documents, etc. then I will stand corrected.

Typical ham thinking. Unfortunately, you're trying to distract attention from the original premise of my post, which is that it is highly doubtful as Scott contended that the FCC officially condones intentional interference by amateur radio operators on any other users of the radio spectrum.

Once again, I would gladly retract my statement if anyone can specifically document the reference in the FCC's written records, proceedings, announcements, rulemaking, etc. I do not read each issue of the FCC Record or Federal Register so perhaps I missed something.

Sorry, but I've never owned a CB rig or operated on 11 meters. Nothing wrong with it, just never something I was very interested in.

On the other hand, I've held an Advanced amateur license since 1976 (WA3ZXO), and a 1st Phone w/Radar Endorsement (P1-20-15378, etc.) since 1973 [of course it is now the GROL]. Worked in broadcasting for quite awhile, including 3 years as chief engineer of a commercial UHF-TV station.

What perchance made you think that I was a CB'er, though ?

Basically, if someone's dog is pooping on your lawn, do you just
let it happen?

If the police don't care when you tell them about it, and they're
the only ones who can officially enforce the no-poop statute, do
you just let it happen?

Hopefully, the answer is no, especially if the powers that be say
that you can talk to said perpetrators and are still allowed to
use your own lawn.

This debate comes up all the time. The proper solution is to
eliminate the problem at the source, which would be in South
America.

However, the FCC has no jurisdiction there, and the law enforcement
and telecomm agencies down there apparently care LESS about it than
the FCC cares about violations up here (if that's possible).

Final, bottom line - we have privileges there, they don't.

"Muscleing" one's way onto a military base is often quite difficult, since they are usually surrounded by large quantities of chain link fences and barbed wire. Walking around on one can also get yourself killed quite quickly, should you happen to wander into a live-fire mortar range.

Of course, miltary bases don't happen to run right through my personal property, or my body for that matter, either.

>Taps can be done off of a person's property.

That's true, but it also requires you to have access to the physical telephone line. It also means you have to be able to readily identify the pair that the conversation is occuring on. Not an easy chore.

The rec.radio.amateur.* NGs are as busy as ever. I find it *very*
difficult to remain current in reading them all.

Just so you'll know there is life outside of .misc, here's a list
of all the r.r.amateur.* groups:

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

You'll find quite a bit more that "150-200 new posts per day" in the
above, and their content will be at least as educational as anything
you'll read in r.r.cb.

Several of us have called the FCC regarding the illegals on 10m. In
all cases, the FCC stated that they do not consider amateurs as having
committed "intentional interference" if they carry on amateur trans-
missions which happen to coincide with the same freq'y in which illegals
are transmitting. In the particular phone conversation I had with the FCC,
the agent stated "It's impossible to interfere with an unauthorized
signal." I pressed him by asking, "What if the illegal operator moves
to another 10m amateur freq'y and continues his unauthorized transmission;
if the amateur also moves then transmits on same freq'y as the illegal,
could that be interpreted as intentional interference?" The FCC agent
repeated his same statement above.

>For someone so "into" ham radio who is always touting his efforts to
>help the hobby (it is just a hobby, by the way) grow,

Not according to the FCC; they repeatedly refer to our past-time
as the Amateur Radio Service - no where is "hobby" mentioned in
the regs.

>you sure seem to
>want to encourage nasty behavior by its current participants. Now
>*that's* the way to win friends and influence enemies (apologies to Dale
>Carnegie). NOT!

I don't wish to win the friendship of unlicensed operators who
knowingly break federal and international communication laws.
Treat them like the roaches in your kitchen - chase 'em away.

Why would you do this (keep changing frequencies to *follow* the interference) if your intent was to communicate over the radio with another station of your choosing ? Seems like you would want to avoid the interference rather than continually encounter it. I guess this is what has me confused. Can you explain why you'd even think of doing this ? Good radio practice includes listening on the frequency before transmitting, doesn't it [along with minimum power necessary, etc.] ? Or is this the "two wrongs make a right" argument commonly heard from gradeschoolers ?

> I don't wish to win the friendship of unlicensed operators who

> Treat them like the roaches in your kitchen - chase 'em away.

Somehow I don't recall vigilante-ism as one of the expressed goals of the Amateur Radio Service, since we're sticking with FCC definitions. Experimentation, emergency communications, reserve of trained operators for military --- OK (if a little outdated in reality). Fostering international goodwill --- well, that's a bit of a stretch in light of this thread :-) But vigilante tactics on the FCC's behalf --- nope, don't see that listed anywhere. Once again, please cite your source(s).

It seems as though you are encouraging people to take their dogs over to the perpretator's lawn, and return the favor. Or worse yet, do the honors themselves. (Yeccch)

> If the police don't care when you tell them about it, and they're
> the only ones who can officially enforce the no-poop statute, do
> you just let it happen?

I would put up a fence around my lawn.

> Hopefully, the answer is no, especially if the powers that be say
> that you can talk to said perpetrators and are still allowed to
> use your own lawn.

But you are not proposing just "talking" to the interferers, but rather intentionally jamming their communications. Plus I just don't get the personal possession some hams show for the radio spectrum ("my own lawn"). Rather it is (like this or not) a shared resource, comparable to a public roadway. Do you tailgate a slow driver who is in your way ? Do you act recklessly to 'send a message' to someone acting likewise in your opinion ?

> This debate comes up all the time. The proper solution is to
> eliminate the problem at the source, which would be in South
> America.

That would be the optimal solution, yes. However, why not outsmart 'em and use some of that technical superiority which ham radio likes to flaunt (in fact, advancement of the technical art is one of the objectives of the Amateur Radio Service IIRC) such as Spread Spectrum ?

> However, the FCC has no jurisdiction there, and the law enforcement

Source record: 175517

I was given a micro 2AT today, and have a few questions.

1. Does anyone have any idea of the switch settings for the PL tones?

2. Does anyone have a source for the NiCad battery back? I checked Radio Shack, and they want 133 bucks. Seems kinda salty to me.

3. Has anyone ever used a DC power supply to power this HT? A warning plate on the back instructs not to do this.

This HT works great, but eats AA batteries fast! Any thoughts?

Paul, N3PEE

"But for every one of the liberated prisoners, the day comes when, looking back on his camp experiences, he can no longer understand how he endured it all. As the day of his liberation eventually came, when everything seemed to him like a beautiful dream, so also comes the day comes when all his camp experiences seem to him nothing but a nightmare.

"The crowning experience of all, for the homecoming man, is the wonderful feeling that, after all he has suffered, there is nothing he need fear any more -- except his God."

Your HAM ticket is good for 10 years from the date of issue, you can not transmit after that 10 years unless you have renewed your ticket. After the ticket expires, you have, I believe, a two year period to renew it without retesting, a sort of grace period to renew but not transmit until renewed.

If your ticket expired and more than 2 years has passed since it expired you will have to find a VE Session and retest and get a new ticket just as if you never had a license.

I recommend finding a local VE for a 610 form if you are still within 12 years of the date the original ticket was issued. If past 12 years...find a VE to retest. You may also want to do some studying, some rules and freq privs have changed in the last 10 years.

Sorry I don't have the FCC's address in Gettysburg, PA handy, you might try searching for FCC.GOV on the internet, I am sure you will find their website.

Good luck on getting back on the air.

Burt,
I received the April issue of QST in the mail yesterday. I was reading the correspondence on
page 24. One of the letters is titled "Top ten things a ham needs in his/her shack."
Reason #2 reads "A picture of you with your arm lovingly wrapped around your loved one, ie, that
brand new transceiver!"
It pretty much emphasizes your point of where hams place their priorities.

I supposed we should just set back and let these illegal operators move on up into the 10 meter band unopposed and let it become just like 11 meters. The only caution I would advise is that licensed operators in some other countries can use the section of the band below 28.3 for voice, so everyone you here down there on voice is not necessarly an illegal op. But when I hear that southern drawl on AM down there you can bet it's another cber who wandered up to 10 meters, and I don't hesitate to fire up the AM rig and ask them to take it back down to 27 mHz.

Of course it isn't written into the rules, as when the rules were
written the FCC had the teeth to take care of illegal (U.S.)operators,
which they did. Things are different now, and the FCC isn't going to
'come getcha' for interfering with and running illegal operators off the
band.

If you have ever had an interest in speed and autoracing, here is an opportunity to combine Amateur Radio, Emergency Communications and Autoracing. Rally races in Minnesota are run on dirt forestry roads in Ojibwa Forest near Park Rapids.

The Head Waters Pro Rally is run against the clock in stages from late afternoon Saturday May 16th until midnight. The cars run with a half dozen head lights on dark and rutted forest roads at up to 90 mph. The entire race is controlled on Amateur radio via simplex. Radio operators serve as communicators for race officials and as safety personel along the stages. They ride with mobile advance cars that check the stages and with medical and safety vehicles that check the stages after the cars pass and respond to emergencies.

The best way to get involved is to bring a car and a mobile 2m rig. A dual
bander mobile crossbander and a hand held dual bander or 440 rig would be ideal for hands free away from vehicle operation. A speaker mic or headset is needed.

Another way to get involved and still ride with your buddy to Park Rapids,
is to bring a mobile rig and magnet mount and enough hardware to wire to any car power source. Ideally, wiring direct to the battery is ideal, but not always possible. Bring a cigarette lighter plug and hefty alligator
clips or jumpers also. Then you can be assigned to a non-ham race or safety
official. This can be a very interesting ride!

The experience is a great opportunity to exersize your ECOMM skills in a exciting setting in beautiful northern Minnesota. Let me know if you are interested. I will assign you to a task of your choice if possible.

C'mon Inn in Park Rapids is the race headquarters.

Arrival early afternoon on May 16th is advised.

The phone number is 1-800-258-6891 or 1-218-732-1234

>feel like it?

This isn't any analogy at all. Public Property isn't the issue.
It is the reception of radio waves which are propogated everywhere.
I could care less about listening to cellular or cordless (both
are now illegal to listen to), but the ability to listen (or rather
the ability to prohibit reception) is in the service provider.
Unless one expects every scanner and many other
radios to be confiscated, the reception of cellular
and cordless is a given....regardless of any laws to the contrary.

>I agree with the idea of encryption...that's why I've got a digital cell
>phone, not an analog one. But, that doesn't change the concept that just
>because something is there...that it's yours to use (or listen to) at will.

Yet the concept you speak of does not change reality.

4349. Emergency locator transmitters (ELTs)

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-19 00:00:00 UTC
From: bobbishc@clark.net
Message-ID: <6eq3jdrth1@clarknet.clark.net>
Source record: 175558

Hi,

Not sure if this is the right group to ask this...

I'm looking for specs on ELTs, particularly those that are the 121.5 MHz and 243 MHz types. Need things like output power requirements, modulation, etc. Any info at all is helpful.

4350. FS/FT Icom AT-150 - Reduced

FS/FT Icom AT-150 - Reduced

I have the Icom AT-150 Automatic Antenna Tuner in mint condition. Not used more than 15 to 20 hours, always covered when not in use, with original interface cable, manual, and box.

AES price for a new AT-150 is $ 499.95, and $399.95 for a demo/used one. I originally posted this for $300 + shipping, and now reduced to $275 + shipping.

FS/FT: Cushcraft R5 Vertical - Reduced

I have a like new Cushcraft R5 vertical antenna for sale. Excellent limited space no radials antenna.

This antenna was used for just over a year, and been in storage for the last five years. Extremely clean, almost like brand new. Complete with all hardware and documentation, in the original box and packing materials.

Work 10, 12, 15, 17, and 20 meter with this highly efficient vertical radiator only 17 feet tall.

Original asking price was $200 + shipping, and now reduced to $175 + shipping.

73s Saad KB6VIR/5 Dallas

I don't exactly know why, but I get kind of interested when I come across 14.313 or 3.853 MHZ and there is one of those sociopathic brawls going on. It doesn't seem to me that the educational background of the people involved matters one bit. I think that those with more money and education who get in to that sort of thing have more resources with which to be obnoxious, but the end result is much the same. There was a CB'er in this town who's big kick in life was to take a transmitter, power it from a battery charger so there was lots of 60 HZ hum in the signal and leave it on channel 19 for hours on end when he got mad at somebody. This condition was almost permanent since he was paranoid and the QRM'ing didn't really stop until he was hauled to one of our state's mental hospitals for a bit of head-shrinking.

This same guy would sometimes put one of those audio inversion style voice scramblers on his CB rig and babble for long periods of time to QRM channel 19 when he got tired of the buzz.

Back about a year ago, I listened to 3.853 MHZ one night and heard some character doing basically the same thing only with a computer and sound card. He set his system to play scores of iterations of that television commercial which featured the older lady saying "I've fallen and I can't get up!" He played a hundred or so of that line and then switched to several rather off-color lines from movies and cartoons which he would repeat 40 or 50 times. Obviously, this fellow had more technical knowledge than our CB'er friend, but the thought was just the same. Make the frequency unusable because he didn't like somebody there.

Another person on 3.853 liked to play music and even do a little D.J. chatter. He was also heard talking to a guy and said that he was an unemployed X-ray technician. He didn't sound the least bit dumb to me, but I think he had some real problems.

After one has listened to some of that sort of thing or the other radical conversations about religion and politics and how to fix the world's problems by doing this to this group or that to that group, it is refreshing to tune up or down the band and hear normal people talking about how computers work or how to build a piece of equipment or simply having a friendly chat. I think we could have more of that kind of activity and less of the QRM free-for-alls if nobody would give these misfits any reenforcement. That is their life blood and even negative comments tell them that they are being heard.

I think it is a mind set and income and education only change the details of the racket, but it is still racket and it is still obnoxious.

I am sure that this kind of stuff really goes over well at telecommunications conferences when certain government and commercial groups want our frequencies and that is truly scary.

I'm new to the radio world, and I need some help with data radios. I am an engineering student and I have a project that I am working on where I essentially need a 3-4000 foot serial cable. Obviously, I would like to do this with data radios or radio modems. The commercial products I have come across are extremely expensive - $1500 for a pair of radios and usually overkill in capability for my needs. I only need to transfer a couple k worth of data every few minutes.

Could anyone give me ideas on how to transmit serial data for a reasonable amount of money with a mile or two line of sight range?

I would greatly appreciate anything at all someone could tell me.

Thanks,
mike

REPLY...

You have no privacy when you use a radio device. Therefore, there can be no "invasion of privacy." The radio waves from a cellular phone are sent out for miles in all directions. People with unmodified radio receivers, of all types, can easily listen to your conversation.

Do you even begin to realise how many people easily listen to cellular conversations? Military personnel routinely listen to radio conversations (their equipment is capable of receiving all frequencies).

Police legally, and routinely, listen to cellular calls (there is still some debate over the use of overheard conversations in court). Since the early fifties, scanners have been sold in this country. Each of these millions of unmodified scanners can listen into cellular calls (cellular was only locked out of scanners sold in the last couple of years).

My god, I even imagine government employees (spys, etc.) overseas listening to cellular calls here in the US. And, of course, many countries around the world have satellites listening into radio conversations worldwide (many traveling over the US right now).

I could go on listing other listeners, but I think you get the idea.

With all that listening going on, it is a little hard to claim that you have a reasonable expectation of privacy with using a radio device. Therefore, it would be pretty hard to invade your privacy.

REPLY...

Actually Jeffery, that is a poor comparison. Radio waves do not stay restriced to a bedroom (behind a closed blinds). Radio waves travel for miles in all directions. So, a better comparison might be to describe a person standing naked on the roof of a three story building, doing a dance for the whole neighborhood to see (radio waves are more similar to that).

A person doing a dance on the rooftop in the nude has no reasonable expectation of privacy. And a person sending out radio waves for miles in all directions should not expect to have moch privacy either.

Even if you restrict scanner users from listening, there are still many others who routinely listen in on cellular calls (military, police, the FCC, cellular phone makers, cell phone service providers, foreign governments, etc.).

With all those people routinely listening, it is a little hard to claim that the cellular phone owner could have a reasonable expectation of privacy.

Of course considering the number of CB'ers why would this surprize you? Why would you even compare the two?Pehaps you should spend more time there Masa, I'm sure you could enlighten them with your vast knowlege of radio electronics, why you could be a hero over there Masa, the CB'ers (not knowing any better) would consider you an expert and come to you for all their technical questions. Everyone here knows your just an idiot troll, but over there you might actually command some respect, of course thats only if you READ the newsgroup, once you start posting your cover will be blown.

By the way, doesn't it make you wonder why the posts have doubled or tripled in the last couple weeks? Do you really think in the last 14 days CB radio has become that much more popular. Sheeesh....

Well, it's illegal for me to operate VHF above 148 Mhz so if I choose to
have a simplex converstation on the output of a local law enforcment
repeater should I then complain that they are interfearing with my QSO? I
mean if they started to talk right over me with no regard for my on going
QSO are they not intentionally interfering with me. Gee is this the way for
law enforcment to behave? Is this somehow different from another station
operating illegally in a band designated for me (amateurs) ?

That's a bit of a stretch... Should we eliminate History? Does not seem applicable to someone who want's to be a nurse, is it really necessary for a brick layer to have good grammar, perhaps he could bypass english class. Good math skills would not necessarily make a good Crisis Intervention Counselor. What exactly could we teach that EVERYONE would use?

> How many people after High School have all the large expensive machines
> at there homes that they used in Wood Shop?? What good is this "skill"
> if you don't have the tools needed?

I don't know what they taught in your High School, but my wood shop and metal shop classes taught manufacturing processes, raw material conversion and the like, along with making 'gadgets'. In metal shop we were required to cost out material for our metal dustpans, consider our hourly labor cost and figure out how much we would need to sell it for to make a profit. Does this seem useless to you?

> It would be just as silly to have a Brain Surgery Class or Slinky Making
> Class in High School.

Why? I took a drafting class as an elective, while I've never done any drafting it sure came in handy when I was selling industrial automation equipment and had to deal with design engineers.

Actually since 73 is a CW term invented to make CW conversation shorter why even use it when writing or speaking? The reason is that it has become a word (jargon) of it's own in ham radio. Many hobbies have a jargon of their own so why not us? How about the word "destinated"? Boy how some used to rag on about that. And heaven forbid some of those CB words and mannerisms have crept into the hobby. How about the guy who always calls himself "we"? Big deal. Chill out and enjoy. 73sssssssssssssssssssss

Hi Rick/Mike

According to the eggheads, you guys are classed as Craftmen (upper Working Class). There are a lot of bright guys in this classification. Some people are happier with a "hands on" position rather than desk job.

Where it gets bad, is when people look down there noses at others. Look at managers and engineers who think the guy on the shop floor is an idiot. As you already realize, the guy who has to do the job usually has a better idea of the problems involved. You are lucky in that when you got out of the Navy, you could get a job. I worked with a guy who left the Navy after 9 years, was trained as a CT (E-6). Industry is just not interested as it once was in Navy training. College degree or nothing. Look at the recent issue of US News & World Report. If have experience but are over 50, no one wants you. Everyone wants the kid right out of college, straight As, willing to work 70 hours per week. Where does it leave the rest of us?

What I am seeing is that some folks react badly to this situation. I believe that many of the CB types, lids and so forth are from this class. I am not trying to put them down. Rather if our society would fully employ these folks, would they not give up some the supidity? I think the Liberty net types have too much free time. Idle hands are the devil's workshop.

Do not think that one is less because of class. That is the egghead way of making the world make sense. Often the college grad looking down his nose is, himself, very insecurity. Look the "ring knockers" (Academy grads) in the Navy. I think a lot of the enlisted Navy folks attitudes towards higher education comes from how they were treated by their officers.

What is frightening, is that many Navy officers are very anti liberty. Many are for gun control and more controls over the civilian population. Given how we are seeing more restrictions on how we use radios, these outside issues are effecting us.

My HAM-TV friend DID transmit pictures into his neighbors home!
He said that he was ready for other HAMS to see him on HAM-TV but
not his neighbors.
He asked the lady next door if she wanted him toi bring his TV transmitter
and camera into her home and she said, very emphatically - Not in MY house,
you don't.

We were transmitting on 434 MHz and she was idly changing channels and
picked us up on channel H (in those days you had six UHF settings on the
TV dial). Channnel H accidently was tuned to 434.
She called and said "What does N7AOU-ATV mean anyway?"

I thought it was exam time, or close to it.

You're making the same mistake about the newsgroups as you are about
ham radio.

Quantity is not important if quality suffers. We could all post an inane
post here each day, and there'd be plenty of posts, but that would not
mean that anything actually useful was said.

The same with amateur radio. Getting more hams is important if it's done
because we want to share something we enjoy. Getting more hams in order
to justify the frequencies is a false path, because once you start
changing the standards so it's easy for everyone to get a license, you've
guaranteed that the only way you can justify the frequencies is by having
millions and millions of hams.

Well Masa..... Maybe that is because the hf bands have been more active
for the last few weeks and most hams are spending their free time doing ham
radio and not just typing about it......

> 73 to all of you

Whew! I sure won't send THAT anymore!!

Problem is, "regards" in "best regards" is only plural in _form_. If I say "Best Regards, Scott," does that mean I have (some number N) "regardS" for you, or that I regard you in so many different ways? If I say "CongratulationS, Scott," does that mean you are getting a plurality of kudos? I don't know much about the ham thing yet, but this is an English thing.

73 + 0 de Ken KF4VXW :)

4389. When is jamming not jamming? Examples.

If you live in a crowded metropolitan area, with a repeater every 15 kHz, could you not choose to use any of them if all were open to all amateurs? Does that mean you HAVE to choose an alternate if you don't want to?

Let's say that some non-ham jammer is sitting on the input of a given repeater station, and causing it to remain in the "on" position.

ACTUALLY...

Let's say that two non-hams have chosen your repeater's input frequency as their frequency, and their non-ham transmissions continually clog your repeater.

As that frequency is "ALREADY IN USE BY ANOTHER STATION," you should NOT attempt to use that input frequency because you would likely interfere with these other people.

Uh huh, right.

As an amateur operator, I have been granted the privilege to operate on amateur frequencies. This includes making 2-way contacts, code practice, on-air equipment testing, bulletins, and other types of transmissions in a variety of modes.

Just as you would attempt to use your repeater, I choose to call CQ on 28.005 through CBers. It's not jamming because I am attempting to conduct legitimate amateur "business" on legitimate amateur frequencies in a legitimate way through communications that aren't licit in any way, shape, or form.

They constitute NOISE.

...just as you would expect the police to continue their operations through an illegal jamming station who for some reason parked him/herself on a police frequency...

Last weekend, I even ANSWERED a CQ from Zambia on 28.005, and had a few QSOs on 28.015. Working through the heterodynes actually proved a good test for my equipment and ears.

4390. Questions on shortwave decoding

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-20 00:00:00 UTC
From: jocatch@ibm.net
Message-ID: <6etsp7udq2@mdnews.btv.ibm.com>
Source record: 175449

I just got a new Drake R8B and I want to start learning how to decode weather faxes, RTTY (both Ham and non-Ham), faxes, and anything interesting on shortwave. I got a program called something like BLT which uses the Sound Blaster to do the A to D and last night I found one RTTY signal at 3623.62 khz. I was able to decode it although the tuning was very touchy. I have almost zero money to devote to this so any decoders I need, I need to use either my sound card or need to be able to build it myself.

1. Where can I find a list of frequencies commonly used for RTTY, faxes, etc?
2. I have the plans to build Hamcomm. Is it any good? With that and software, what can I decode?
3. What are some good programs that use a sound card?
4. What programs use Hamcomm?
5. How do I find out what each mode of transmission sounds like?
6. What about SSTV? Is there much of it on shortwave? Any SSTV programs that use the sound card?
7. Any good web sites on this subject?

Joe C.

At which point you are in violation of the rules and regulations of the Amateur Radio Service. Rules which clearly prohibit communication with unlicensed stations.

A fine example you set for other amateurs and would-be amateurs.

Assuming of course that you have the power to "chase 'em away." These days, the
average illegal CB station has more power than most amateur operations.
They're not using Siltronix VFOs and 60-watt Kris Boomers anymore.

I don't think it matters what is "legal jamming" I don't think that it
makes a differance. The FCC ain't going to do anything. If they were
going to do anything they would would cleaned up 75 mtrs a long time
ago. As for pirate free banders they have been a problem in my area for
years and they still contiune to this day. The FCC ain't going to do
anything about this type of radio activity. The way one FCC offical put
it to me is they have limited reasources and if the communication crime
doesn't effect life or property then they don't care. So there it is
fellows. I look at Jamming stations like this ITS GOOD COMBAT TRAINING!
I was a radio operator in the army and we always trained through jamming
situations. We as ham radio operators are supposed to be a resavior of
trained radio operators. So operating through Jamming is part of our
training. I think Jamming stinks, but its out there and we have to deal
with it.

Gordon West Radio School Presents:
T W O Special Classes!

No-Code Technician Amateur Radio
Licensing Class For Mariners
Friday June 5th, Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

And…

General 13-wpm Morse Code
And Theory Review Class
Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

No-Code Technician Class for Mariners -- Class Instructor: Gordon West,
=================================== WB6NOA
This special class is designed specifically with mariners in mind. Learn how Ham Radio can make your next cruise even more fun! Stay in touch with fellow hams as you sail down to Baja, use ham radio phone patches to keep family and friends advised of your position. This fun and entertaining two-and-a-half day class starts on Friday afternoon and covers everything you need to get your Federal Communications Commission No-Code Technician license. Take the two multiple-choice exams right there in class and get your callsign two or three days later! Students who pre-register will receive the Gordon West "No-Code Technician Plus" textbook, theory cassettes, and a special pre-study package. The class fee includes nineteen hours of tuition, beverages, lunch on both days, a barbecue on Saturday night, and a special Saturday night after-class workshop detailing marine installation and use of ham radio onboard yachts and powerboats.

General 13-wpm Morse Code
and Theory Review Class -- Class Instructor: Julian Frost, N3JF
========================
This class is for mariners that want to upgrade to the General Class license, but like many people, find the 13wpm Morse Code requirement their biggest stumbling block! Make 1998 your year to upgrade. Don't let the Code hold you back any longer, the Worldwide HF bands are waiting for you. In fun, stress-free way, your instructor will take you from a shaky 5-7-wpm all the way up to 13-wpm, or higher, in preparation for your exam on Sunday afternoon! Techniques in passing the CW exam will be taught, and there will be multiple demonstrations showing just how easy it is for YOU to pass the 13-wpm, or even the 20-wpm code exam! Theory review sessions are held throughout the two days to help make passing the written exam even easier. Students that pre-register will receive the Gordon West

"General Class" textbook, Gordo's exclusive CW tapes, and a special pre-study package. The class fee includes sixteen hours of tuition, beverages and lunch on both days and a barbecue on Saturday evening. General Class students join Gordo and his No-Code Technician class for an operating session and workshop dedicated to installing, using and maintaining ham radio equipment aboard yachts and powerboats.

--==--

For full details on either of the classes described above, please call Gordon West at (714) 549-500 between 10am and 4pm, Monday through Friday.

>>this with data radios or radio modems. The commercial products I have come

The datasheets for RS485 line drivers (and the earlier RS422) specify
distances up to 4000 feet. This will only work at low data rates, but
this should be ok for you. The chips only cost 10 bucks or less,
choose your cable carefully. Check out MAXIM, LINEAR TECHNOLOGY and
NATIONAL SEMICONDUCTORS for application notes (they all have web
sites).

Be careful of using modems, this will work but you need to give both
modems secret incantations to get them both online. Modems expect to
see a dial tone before they'll whistle. There are modems that can cope
with liased lines but again check with the manufacturer, I don't know
much about leased lines, they may only match telephone circuits...

In general Electronic circuitry needs to be well designed to drive
4000 feet of cable. The wire will have a high capacitance (hint don't
use thick cable!) look for LINE DRIVER circuits in the databooks
(MAXIM) ...

Cross-posted to: rec.ham-radio,rec.radio.amateur.equipment,rec.radio.amateur.misc

Greetings all, I recently acquired an FT-980 CAT xcvr. I was wondering if anyone out there knows which (if any) of the available software will work with the Yaesu 232 (FIF232 ??) interface to control a 980. I know it all controls the 1000 series the 990 and assorted other Yaesu's, but none mention the FT-980.
Any info is greatly appreciated, and replys can be sent to me here or preferably by email (tmedlin@dimensional.com).
Thanks in advance and 73,
Tim KB0OGD

4411. Ham Radio License Exams - March 22 - Lindenhurst NY

VE -Lindenhurst,LI March 22, 1998

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12:00 NOON....no reservations required. This is no VE
in the month of JUNE 1998.

Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring TOP buzzer for
entrance.

Location: Babylon Town Hall
Emergency Operations Center
200 East Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1998 Exam fee is $6.35, please bring exact change.
* Novice exams (elements 1A & 2) are free.

For addition information you may contact:
Michael Grant N2OX (516) 736-9126 or globalcm@erols.com

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5)
PL required. You may also write to:

I'm looking for a reference book, or CD-ROM, or even a set of posters,
that easily explains some of the policies, rules, band plans, etc. etc.

I just got my tech license and don't want to be an annoyance while I learn
how to use my priveledges. Any places you could point me to would be
appreciated.

E-mail would probably be best, as I might miss it in the group.

Thanks,

Chris Buckley

Message-ID: <6eun3q$1va$1@gaia.ns.utk.edu>
Source record: 175474

Hello All,

I'm working on getting my Advanced Ticket and I think I am 75% ready. The other 25% is the Electrical Principles. Questions like What is the R-L-C circuit if R is 47 ohms, L is 50 microhenrys and C is 40 picofarads? I read and read the ARRL study book, the ARRL handbook and I still can't understand the formulas that it uses. I am bad bad bad at math. So anyway I'm going to keep working on it and I'm sure someday I will get it (I hope). Just wondering if anyone knew of something to study or someway to make all of the formula questions in the Advanced Class test easier to understand for a Non-Math person.

Thanks for any help..

Hi Ian,
Welcome to amateur radio.
The PSE QSL means please send me your QSL card.
The TNX QSL means thanks for sending me your QSL card

PSE is cw shorthand for PLEASE
TNX is cw shorthand for THANKS

Just part of the amateur radio lingo you will hear and read as you explore
your new hobby.

Sorry Ray, but these fill-in-the-blank exams replaced the multiple
choice exams because the A-B-C-D stuff was so easy that even those who
passed it complained. I got my Extra in 1983, at the Chicago FCC office
and passed the 20wpm by the grace of God, and because it was a fill-in.

Studying for it included a 21wpm tape that I played to and from work,
just to tune my ear. I copied code at 16 through 22 (I had my ups and
downs along the way) for fifteen minutes twice a day at work. And when
I sat down to take the test the tricep on my right arm went into a knot
from stress. When they said (I could head copy it fine) "rig is ..." I
wrote down the name, at "worked ..." I wrote down the number, andd when
they signed, I double checked the two call signs. I got 7 out of 10 and
I nearly kissed the ground when the guy in the suit said I passed it.

I'm a technical guy, so the written was not exactly easy, but I knew how to study for it. The code, however, was always tough for me. I did the best I could for almost three months before I could reliably copy at 18wpm and could boast of spurts of up to 22wpm. I still had trouble.

My points are 2: I am very grateful for the fill-in tests, and they came out way before the VECs took over.

Oris,I would say that I can speak for the newsgroups in saying that we have had enough of your crap. I and the entire usenet community is really sick of your childish ranting and raving. It is obvious you are trying your best to cause hate and discontent on this forum just like you do on amateur radio. It is a damn shame that you do not know how to be a man. If you have such a big problem with me,then come up to me in person at a hamfest and straighten it out. Your continual whining and crying with these fake headers is only demonstrating your stupidity and gutlessness. How you are able to look your daughters in their face at night when you tuck them in knowing that you did not do your utmost to provide for them financially is beyond me. Obviously you fail as a man in that department too.

The previous post as fact is about as false as they come. I enjoy repeaters here in Atlanta,it is the one area in ham radio that you have not started this crap in. Yet. Give the group a break,if you have a problem with me,straighten it out. I'll be at Kennehoochee this Saturday,March 21,all day. That's in Marietta,talk in 146.880- Or you can try Dayton,I'll be there all three days.

Yeah, what would the HF phone operators use in place of "CQ"? I'd
love to hear some amateur actually say the ITU's "Hello All Stations"
in place of the telegrapher's "CQ." Burt was supposed to be the
first ham to use it - he was complaining about operators using code
prosigns on phone a few years ago.

Oh, and do be careful of believing anything you read in an April
QST issue...

It isn't the international operators we are so much concerned about, it
is the local (U.S.) cb crowd that is edging up into the 10 meter band.
We just don't to let them make 10 meters a sewer pit like they have done
on 11 meters.

>contended that the FCC officially condones intentional interference by amateur
>radio operators on any other users of the radio spectrum.

You've errored again, Baker. The FCC has repeatedly stated that they
don't consider such actions as being "intentional interference."
As I was told by the FCC, "It's impossible to interfere with an
unauthorized signal."

>Once again, I would gladly retract my statement if anyone can specifically

No one on here (who is licensed) will lose any sleep regardless of
whether you make a retraction or not. Call the FCC and present this same
scenario yourself.

Have we been QRMing you on the low end of 10M, OM? So sorry...

No, you are NOT honest. Or at least NOT legal.

It is illegal to sell 10 mtr amplifiers COMMERCIALLY.

Considering this, they are most likely garage or basement junk.

Often they will 'simulcast' both VHF & UHF. Try to get someone who is a pilot to look up the freqa for the airbase in the Airport Facility Directory, or the IFR supplement. Also, plane to plane comm is usually done on a discrete FM channel as opposed to the VHF/UHF AM Air to Air, Ground to Air etc. so that's a whole different ballgame. I don't imagine they give out those freqs willy nilly. However, they usually DO have a practice the day before or maybe 2 days before, on location, so you could go out to the area and do a search/scan. I imagine it would be pretty much line-of-sight reception. Good LUCK!

Two Hams got back to me with Grey Market Dealers in the USA !!! No Japanese.
I will call them and get prices etc. These guys say they get Icom Equipment direct
from
Japan and not from Icom USA. I want to see the prices on several popular radios
etc.
I also want to see Yaesu and Kenwood stuff too!
I will let you guys know early next week. If the FT-847 is $1350 or even $1500
I'll buy
it vs paying the $1820 from the USA Ham stores !!

Doubtful that would happen, for my door is open whenever I'm at home
(it gets quite warm here in Hawaii). I'd give the authorities full
access to my home anytime they so desired entry.

What's ironic here is that if martial law were ever declared, it might
be *me* breaking down *your* door!

You may want try talking to someone at the Franklin Institute Science Museum in Center City Philadelphia, don't have the number, but 215-555-1212 will get you directory assistance in Philadelphia, PA and they could get you a number. Also the Franklin Institute probably has a website. They also have their own amateur radio station run by voluteers. I have seen a working telegraph exibit their also.

Good luck

Hi
thank&#65533;s for read this,i &#65533;m try found some " YamModem Builder&#65533;s",for change opinions ,about the contruntion problems ,and the " FPGA" configuration.My YamModem work in " CONFIGURATION fase" ... i use the " Yamser05" drive for Flexnet Sofware (the best sof. i Know). Every time when i load the Flexnet ,next the Yamser05 (at this moment the Yam is a Live !), i see with an osciloscope the " TXclock," "RXclock" and " 2.4576Mhz oscilation"...next when active the " Flex" this signals STOP !

CONCLUSION (My)
When this happen the " RTS " and " DTR" (at moment i active the Flex),her l&#65533;gical state change, made Power Supply (provided by this two pins) drop and of course the FPGA configuration UNLOAD.

So if somebody BUILDE the Yam and have solution for this ,please inform...

Thanks in advance ,

> I need a schematic for the Pyramid Phase III Model PS-35. I will be
> willing to pay copying and postage expenses.
>
Well, I only have the PS-20...it went bad once and had to replace the
rectifier....I don't know if the PS-35 is the same set up...but the PS-20
was pretty easy to trouble shoot, not much in it. I didn't have a schematic,
but just opened it and followed the the path from AC in through the switch into
through the transformer...think it had 3 taps on the transformer and only used
two of the diodes in the rectifier (it's been a year since I worked on it)
One of the diodes blew and the thing started making a terrible hum...
Well that is another problem. You probably could just wing trouble shooting it
with a VOM...if you need to replace a rectifier make sure it can handle at
least 35 amps. Good luck and sorry I could not have been of more help.

Woodshop is not the same as learning all the government laws, building codes and permits needed to build a house. Besides, not many people have the time to build their own house, nor want to do that for a living. Again, teaching how to balance a checkbook, or filling out a tax form (instead of having to go to H&R Block) would be more practical as this is something EVERYBODY can USE.

Uniden Bearcat Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

Sure! I have yet to use any of THAT information in the real world YET!
Besides, I find out now, that all the "history" from school was WRONG
anyway! And they forget to tell you the GOOD stuff that the government
would rather we didn't know!

Does not seem applicable
> to someone who want's to be a nurse, is it really necessary for a brick layer to
> have good grammar, perhaps he could bypass english class. Good math skills would
> not necessarily make a good Crisis Intervention Counselor. What exactly could we
> teach that EVERYONE would use?

How to do your own TAXES (EVERYBODY has to file) How to balance a Check
book, How to go through all the legal crap of buying a house, etc etc.

We could also replace "History" with "Current Government" and explain
what kind of laws are up to be passed, and what can be done to prevent
them as, unlike History, this will affect our future and is something we
can change.

Great, but when did the other 99% of the class use it? How to do your
own taxes would be good for EVERYBODY, not just those interested in that
specialized trade.

These sorts of things can be taught in colleges or trade schools, but
MANDATORY school should teach things people can USE. I have yet to use
any of "dodge ball" or "how to worship the american flag laws".

>not licensed to use the amateur bands, then you will not be considered
>to be causing them interference. They said, "do whatever you think is
>necessary to discourage them from using the band."
>

From K5PF:
Let me echo this. My contact (John, the ex-navy guy) at the Columbia Monitoring Station said that the use of permitted modes is not considered "jamming" when they occur on the same frequency with stations who are operating in the band without a license.

In other words, he said they overlook RTTY, CW, and Packet on the lower end of 10 meters, but they cannot condone voice transmissions directed toward the intruders.

The CB equipment manufacturers (of so-called "export" radios) have assigned channel numbers which run well into the Amateur phone band on 10 Meters. Many of these radios do not have frequency indicators; they simply have BAND and CHANNEL knobs. The operators have no idea where they are, so telling them to "Take it below 28.0" often is of little use--even if you speak their language. However, a dose of RTTY will make them move. Just keep following them to their new frequency, again and again, until they drop below our band.

Some amateurs feel reluctant to participate in this practice without a written directive from the FCC. A large number of hams, however, feel secure enough to proceed (as indicated above) and are achieving success.

Intruders are channelized every 10 KHz, beginning at 28.005 (28.015, 28.025, 28.035, etc.) If you feel uncomfortable "jamming" these stations, you can do the next best thing: When you call CQ, pick one of the channel frequencies. You will let the intruders know that these are not empty frequencies, simply through casual operating.

Thanks to all who have expressed an interest in this subject. Bootleggers already have claimed the area between the regular CB band and the 10 Meter Amateur band. Let's not allow them to take over our hard-earned portion of the spectrum! Keep operating on 10. Jam if you feel comfortable doing so. Or choose one of the channelized frequencies to start conversations.

73,
Paul K5PF

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. I found these at Dayton one year and bought up all
the guy had. Lot of 10 grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

>choosing ?

A better question is why are you so bothered that amateurs are attempting
to lawfully chase outlaw operators from 10m?

>Seems like you would want to avoid the interference rather than
>continually encounter it.

No, the desire is to rid the band of the interference - only then will we
not continually encounter it.

>I guess this is what has me confused. Can you
>explain why you'd even think of doing this ?

We're only thinking of you. We want to make 10m a pleasant experience for
you during this next solar cycle.

>Good radio practice includes
>listening on the frequency before transmitting, doesn't it

That's certainly correct, and if other amateurs are using a particular
freq'y I'll graciously yield to them.

>[along with minimum
>power necessary, etc.] ?

Never more than 50W input here. (Running a single 6146.)

> Or is this the "two wrongs make a right" argument
>commonly heard from gradeschoolers ?

I answer to the FCC, not "The Baker." And the FCC has deemed that amateurs
are committing no wrong in carrying on amateur communications on the same
freq'y as illegal operators.

>> I don't wish to win the friendship of unlicensed operators who
>> knowingly break federal and international communication laws.
>> Treat them like the roaches in your kitchen - chase 'em away.

>Somehow I don't recall vigilante-ism as one of the expressed goals of the
>Amateur Radio Service, since we're sticking with FCC definitions.
>Experimentation, emergency communications, reserve of trained operators for
>military --- OK (if a little outdated in reality). Fostering international
>goodwill --- well, that's a bit of a stretch in light of this thread :-) But
>vigilante tactics on the FCC's behalf --- nope, don't see that listed
>anywhere. Once again, please cite your source(s).

No where in the regs will you find any mention of "hams" or "ham radio",
DXpeditions, microwave antenna measuring contests or contests in general,
nets, not calling CQ on repeaters, which antenna one should or should not
use, feedline, VSWR, et cetera. There are hundreds of aspects to
the service/hobby that are not specifically mentioned in the regs.
And lucky for us, if something is not prohibited, then its permitted.

You can refer to it as "vigilante-ism" - I prefer to think of it as
house-cleaning.

>themselves. (Yeccch)

That would equate to QSYing to 11m and pooping on them. *No one* on here
has proposed that. (Besides, my rig stops at 28.000 Mc.)

>> If the police don't care when you tell them about it, and they're
>> the only ones who can officially enforce the no-poop statute, do
>> you just let it happen?

>I would put up a fence around my lawn.

That's exactly what we're trying to do - consider it an RF generating
fence.

>> Hopefully, the answer is no, especially if the powers that be say
>> that you can talk to said perpetrators and are still allowed to
>> use your own lawn.

>But you are not proposing just "talking" to the interferers, but rather
>intentionally jamming their communications.

Luckily, we answer to the FCC, not the "The Baker", and the FCC's opinion
is that amateurs are not committing interference or "jamming."

>Plus I just don't get the
>personal possession some hams show for the radio spectrum ("my own lawn").
>Rather it is (like this or not) a shared resource, comparable to a public
>roadway.

Bad analogy. 10m is an international amateur band. The ITU has seen
fit to close it to non-licensed operators.

Your analogy would be more fitting if you considered licensed versus
unlicensed drivers. I wouldn't run an unlicensed driver off the road,
but I'd certainly report 'em to the police.

>> Final, bottom line - we have privileges there, they don't.

>Bottom line --- big fat hairy deal.

Excellent closing argument, Baker. Well-thought response.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <595>

.....
>From the Editor's Desk:

First, we're pleased to announce a new mailing list for those of you who want to post the weekly ACS bulletins without a lot of cutting and pasting. ACS Listmaster Mark Hartman <listmaster@harthaven.com> explains:

"It turns out that the EMCOMM bulletin, which has been a part of the ACS newsletter since we started, is important to people both inside and outside of ACS. For this reason, we've received many requests from people whose electronic mailboxes get several hundred messages per day already to help them cut down the amount of information which is, to them, extraneous.

"So what we've done is to start a new mailing list, EMCOMM-BULLETIN, which will contain only the EMCOMM bulletin; the ACS-NEWSLETTER will continue to contain both the ACS-specific news and the EMCOMM bulletin.

"If you like the information you've been getting so far from the ACS newsletter, you need do nothing; it'll keep coming just the way it has been, including the EMCOMM bulletin. If, however, you want only the EMCOMM bulletin, you can subscribe to the new list by following the instructions below.

"To subscribe to the EMCOMM bulletin, send an e-mail message to autoshare@harthaven.com . Leave the subject of the message blank, and in the body put the following:

sub EMCOMM-BULLETIN *name*

where *name* is your first and last names.

If your mailer supports clickable links, you can just click one of
the following:

To subscribe to the EMCOMM bulletin, click:
<mailto:autoshare@harthaven.com?body=sub%20emcomm-bulletin%20*name*>
and don't forget to replace *name* with your first and last names.

"Please feel free to pass this information around; even those who
are less interested in the details of ACS often find the EMCOMM
bulletin valuable.

"If you have questions about the CONTENT of the two lists, please
wait and look at the issues you'll be receiving; other questions
can be directed to <listmaster@harthaven.com>.

Regards, Mark"

Thanks, Mark! We'll start the EMCOMM bulletin list tomorrow morning.
Remember, if you want to remain with the Newsletter, do nothing; you'll
continue to receive both the Newsletter AND the EMCOMM Bulletin each week.
We hope you like the expanded service...

Second, for those of you have have websites and have a link to the ACS Home
Page,
we've designed a banner that we encourage you to attach to your links page.
To locate it, point your browser to http://www.garlic.com/oes/banner.htm
.....

>From the mailbag:

From: Stan Harter <stanharter@juno.com>

A tip for those perhaps new to RACES in California and other
jurisdictions that have a Mutual Aid low, code, or procedures.
It is safe to say that there is hardly any RACES unit that has
enough people to satisfy all staffing needs beyond a certain
period of time. It's safe to say that if you did have that many
people, you would have a lot of bored, inactive and unused
people on your roster. Don't feel bad! That's what Mutual
Aid is for. When you need people with certain skills and
specific communications hardware, you identify those needs
and place an order with the next higher echelon in the
Mutual Aid chain. I.e., from city to county, county to State
OES Region, from Region to Region and/or State HQ. This is
over-simplified, of course, the specific procedures are
covered by the SEMS procedures. The bottom line is, if you
don't ask, thou shalt run short.
-Stan Harter, State of California OES, ACS Program

From: "Cochrane, Steve" <cochranes@wy-iso.army.mil>

I know this is short notice, but, would you please include this announcement in your next newsletter.

The Wyoming 4th Annual Hazardous Materials Conference, March 31 through April
2, 1998, will be held in Cheyenne at Little America Hotel and Resort, 2800 W.
Lincolnway. For reservations call 1-800-445-6945 or 307-775-8400. To receive the special room rate you must make reservations by March 14.

The conference features 1 1/2 days of training (March 31-April 1). The conference opens at 1pm Wednesday April 1 and closes April 2 at 5pm.

Please register for the training and/or conference by March 20, 1998.

For more information see the Wyoming Emergency Management Agency Web site: http://132.133.10.9/ or contact NancyJo Ilminen at 307-777-4920 or E-Mail to Steve Cochrane cochranes@wy-iso.army.mil.

What's New on the Web:

San Francisco Fire Department's Neighborhood Emergency Response Team (NERT)

http://www.slip.net/~nertsffd/index.html

In March 1990, a group of concerned citizens who belonged to a SAFE (Safety Awareness for Everyone) watch group in the Marina District of San Francisco contacted the San Francisco Fire Department with a request for disaster response training. In every major disaster, spontaneous volunteers are first on the scene to conduct initial search, rescue and first aid. To maximize the effectiveness of these volunteers, the Fire Department developed a five-week training course using a Los Angeles City Fire Department
program as a basic model. The first Neighborhood Emergency Response Team (NERT), comprised of 24 Marina District residents, graduated on October 13, 1990.

For the next year, the training evolved to be functional and useful to the community. By the end of 1991, the Department had trained 210 people. At the end of 1997 there were more than 8,000 trained NERTs. This explosive growth was accomplished with little or no publicity. Word of the training has spread by those who have taken the program. Trained NERTs have a vested interest in seeing that their friends and neighbors have the same disaster

skills level.

Don't forget to send them email at: nertsffd@slip.net

Have a Volunteer site you'd like to see Showcased? Email larton@garlic.com
.....

This week's EMCOMM Bulletin:

EMC122 Unit Priorities 3/3 For release 3/9/98

Although speaking to their city RACES unit, this can just
as well apply to any EMCOM unit serving government.

(Continuing:)

7. Shelters - Should we have to evacuate people from their homes, schools or businesses for any reason, the City and the American Red Cross will set up shelters. We have to be able to talk to the Shelter Manager to provide for their logistical needs. RACES would provide this important connection from the Shelter to the City's EOC.

8. Employee Familv Notification - City employees have been given a card with our RACES frequency. In the event of a major emergency where phone systems are out, family members of employees who will have to remain on duty are to find an Amateur Radio operator and have them report on the family's condition. This is to help the employee stay on the job to be able to respond to the disaster. Not knowing if your family has survived can weigh heavy on the minds of emergency responders. We need to free their minds of this worry as soon as possible so they can concentrate on responding the needs of the community.

9. Other Requests As Needed - We have two hospitals (Huntington Beach Medical Center and Pacifica), convalescent hospitals, large businesses, shopping centers, etc. Any of these sites may need communications set up linking them to another site or the EOC. Flood channels may need monitoring, groups of sandbaggers may be sent out and need communications back to a base location, teams of responders from outside the area may not have common frequencies with our responders and may need links, etc. There are hundreds of scenarios where we will need communications links from one group to another. You may be asked to shadow the Mayor, a responding dignitary, provide communications from the Marines to a Police Command Post, provide communications to responding building inspectors, FEMA, Caltrans, Army Corps of Engineers or the Fire Chief whose batteries in his radio just went dead.

Each of you need to take the time and think out your response to a disaster. We may desperately need each and every one of

you and you had better be prepared to respond with a moments
notice

As you can see, RACES is an indispensable part of the City's
response to disasters. We have seen is over and over again
throughout the United States when a major disaster hits. The
plan is... if any communication system fails..call the RACES.

ARE YOU UP TO THE CHALLANGE?"

.....
>From the Editor's Desk:

Probably the big story this week is the cancellation of this year's ACS Emergency Response Institute. The fact was, too many people connected with the Institute have just been swamped (pardon the pun) fighting the statewide flooding to do the quality effort on ERI that you have come to know and expect. While really disappointed, I believe ERI Director Ben Green did the right thing and made the tough decision. He and I are already talking about next year's Institute. A few staff have suggested a SoCal ERI; something we've never done before.... Of course, we'll keep you all informed as we get new information.

Flood and El Nino from the State of California CERES site has been added to the ACS Home Page, and we've added the American Red Cross, NASA's STONEFLY Project, the N8UT Reference Library, the Amateur Radio Educational Alliance and ACS California Southern Region to the Affiliated Organizations page.

.....

>From the mailbag:

From: Rich Ryan <twooaks@radiks.net>

Dave:
A copy of the newsletter was just e-mail to me by a friend who is an amateur. Found the articles very interesting. Would like to add my name to the list of subscribers.

Also, if not to far out of line, note an article by kd6ykl@juno.com in reply to another article. Would like to add my comments to Mr. Piper article. I am a member of a REACT team here and have been since 1975, and a number of our team members have gone over into the amaterur ranks, and yes they are still friends. However, what we have seen over the years is what Mr. Piper talks about is the arrogance, the attitude that we can do it all. What we have seen recently with the UP railroad and they statement--"We can handle it" has proven to be a bit much. The same is true with the "Hams" we are the only ones who can handle the communication locally and around the world. It is really to bad there is this hard feeling towards "CB'ers" and REACT teams, because as a local communication team we can and generally do more the local community than most "Hams" do. Fully realize this is going to stir up a lot of discussion, but keeping in mind the goal of "Hams" and "REACT" is to serve the community during good and bad times, we all need to be there together. Each of us have our best means of communication and all of it needs to be put to use. Once we put the eggs in all one basket, if that basket falls, the eggs are broken or gone and nothing is left. We certainly do not need to sleep in the same bed, but needs to live and work out of the same house during the time and need for communication.

Anyway, thanks, enjoy the newsletter dated 2-21-98, and if not black balled looked to seeing more.

Rich Ryan

(Not a problem... All comments are welcome - ED)
.....

Dave, Here is some interesting reading for our ACS Newsletter. The Web site at Big Sur is OUTSTANDING! It has many outstanding j-peg photos of relief efforts, as well as the major washouts along State Highway 1 below Carmel.

Bob Spencer / N6IBO
Monterey County ACS Officer

****
---------- Begin forwarded message ----------
From: Tim Ames <tim@hwy1bigsur.com>

Hi Bob, I'm here, been here all the time. Try this email address and you can usually get me.

I'm the only ham in Big Sur. And we don't have a repeater here, just my HF radio and I lost the 80 meter antenna during the first part of February but could still get out on 40 meters.

There was never any time that hams were requested for the disaster here. I'm also in charge of communications for the Fire Brigade 46.080 repeater. During the disaster the fire brigade took over Sheriff yellow tone for all communications. We used the brigade repeater to contact the south coast

of Big Sur. We connected with Palo Colorado, Mid Coast Fire Brigade on local
tone six CDF repeater a couple of times. Handheld comms weren't too good, but we could get Jim Cox's base on yellow tone pretty easy.

At no time were communications out here in Big Sur. We had a period of 7 hours when Sheriff yellowtone went down because of the generator, but I worked
with the El Sur Ranch, North Tree Fire, and Monterey County getting yellow tone back on the air. The Chinooks brought down a couple of generators and we flew up 55 gallon drum of gas and a radio tech from county. I worked also with Marty Evans and Dave with PacBell keeping generators on the phone system to keep the phones up. Cell phones worked well during the whole time.
There was always communication in and out of Big Sur. We were without power in some places for 11 days, but were kind of used to that here.

If your interested in pictures of what went on check out my site:

<http://www.hwy1bigsur.com/>www.hwy1bigsur.com

The fire brigade worked with the Chinooks all the time they were here. We made countless trips to Monterey loading and unloading the Chinooks and also had an engine at the softball field here in Pfeiffer Big Sur State Park.

During all this I had to work 12 hours a day and didn't have a whole lot of time, but I kept up with things on the communication end. I always had internet communication with the outside world at this email address having a generator and could get on a couple of hours each night. I found that my isdn phone lines didn't work on generator real well so I had to use my analog phone line.

None of my phones were working for a while as far as answering machines and such, but I made a few trips into Monterey to see Charles, KC6UXP at North Tree Communications to get equipment repaired.

I'm currently dealing with the state of Calif. CHP Telecommunications division to get a Fire Brigade vhf repeater on Little River Hill this year. We
were turned down last year because of frequency problems, but I think its going to go thru this year. There is a big scramble for tower space as everybody
has to vacate Pt. Sur this year as the tower is condemned and the state park is
not allowing any antennas on the rock anymore. So still no repeater site, but someday maybe. Until then we do what we have to do, and in this case, I simply take over the other agencies repeaters when we have an emergency here.

Thats the state of the disaster in Big Sur. I still keep dreaming that some rich person is going to buy a house on a hilltop here and be a ham.

Current Events:

ERI '98 has been called due to El Nino.
The 1998 ACS Emergency Response Institute scheduled for May 2-3, 1998 has been cancelled for this year by ERI Incident Commander Ben Green. Most of the ERI Staff continues to do battle on the statewide flooding caused by El Nino, and OES has been strained to the limit in its disaster response.
We hope to have ERI back for the Spring of 1999.

From: Richard Tidd <RichTidd@sj.bigger.net

Rick Paige, the Emergency Services Unit Director, of the annual West Coast Fly-In and Airshow at Watsonville, California needs volunteers with special skills to assist its charitable program on Memorial Day weekend including 20, 21, 22, 23, 24, and 25 May 1998.

The event features many aerobatic performers as well as displays of antique, warbird and experimental aircraft. This year's theme is "Flying Circus". There will be multiple aerobatic acts in the air at the same time. Many of the best air show performers will be present.

Air Show volunteers are offered free admission and parking. We will have the best seat in the house, along with the ability to meet experts in the field of aviation, and receive free souvenirs. Expenses incurred while performing this volunteer duty are considered deductible as a donation to a non-profit, charitable organization.

As a member of an emergency services volunteer group, you have the skills we need. Areas of assignment include: Command, Operations, Logistics, Safety and Security, Medical, Communications, Aircraft Recovery, Situation Status, and Admin Support. Both SIMS and ICS are used for management of the event and includes local Watsonville and Santa Cruz County agencies.

Your assistance is needed at various times beginning on Wednesday, 20 May 1998 to 25 May 1998. A minimum commitment of 5 hours on any one day is requested and more is encouraged.

Areas of need, All require SIMS/ICS:

COMMAND: Works in the Command Post providing oversight, management and supervision to personnel in the field. MINIMUM QUALIFICATIONS: Training

and/or actual experience in SIMS or ICS and normally a supervisor. Trainees are welcome.

MEDICAL: Provides first aid and assistance to members of the general public by operating a medial aid station and roving units. May also be assigned to provide assistance to local agencies in the event of a major emergency. Works as a member of a medical response team under the supervision of an experienced EMT or other medical paraprofessional. MINIMUM QUALIFICATIONS: Current certification by a recognized agency in First Aid and CPR. All EMT's and paramedics must provide their own kit (replenished if used).

COMMUNICATIONS: Operates a mobile communications facility responsible for the monitoring and operation on approximately nine different frequencies, including local government agencies. MINIMUM QUALIFICATIONS: An experienced Public Safety Dispatcher.

AMATEUR RADIO: Assists in the operation on the mobile communications facility. Provides alternate communications to airshow staff, local and Federal agencies, ie: shadow, deadline, tower, Air Boss, Ground Boss, Rover's, Rover's, Medical, Fire, Police, etc. MINIMUM QUALIFICATIONS: Must hold a Technician or higher level amateur license. Must be a member of a recognized ARES/RACES/ACS organization. Watsonville EC, Bob Wiser will be your supervisor.

AIRCRAFT RECOVERY: Recovers damaged or broke down aircraft from the operational portions of the airport including runways, taxiways and display areas. Under supervision of the Fire Dept and FAA, provides rescue and recovery assistance at the scan of any mishaps. MINIMUM QUALIFICATIONS: Shall no be disabled or medically handicapped in any way which would prevent them from safely working in a hazardous environment. All must posses knowledge of basic aircraft structure and possess the knowledge and skills necessary for the operation of simple salvage and recovery equipment. Pilots, aircraft mechanics and aircraft rescue qualified persons will be given preference.

If you think you are not qualified for any job, you are probably wrong. Training for SIMS/ICS and other areas will be available before the event and during the show. We need your help.

Contact Rick Paige at 707-468-7466 or by E-Mail to mesaofc@pacific.net, for an application. He will need your contact info to mail you the application.

Thank You from Richard Tidd

This week's EMCOMM Bulletin:

EMC123 HazMat Emerg. Comm 1/2 For release 3/16/98

Here is a real-life use of an emergency communications unit for a hazardous material situation on a major freeway. The report is from Phil Yenovkian, Manager, Office of Preparedness, City of Ontario (CA) Fire Department. (Edited for brevity.)

(In order to follow the action it helps to be familiar with the Incident Command System (ICS) and tactical designators, the X-series in this report.)

The Incident Command System utilizes:
a. an incident (the hazmat situation)
b. an incident commander (person in charge of response)
c. a command post (field location managing the response)

Tactical designators simplify communications. Ontario uses an Xray (X) series. X1 is the Chief Radio Officer (CRO) Robert Malaby of the Ontario RACES. "Coordinator 1840" wrote the report.

"Sequence: 0250 hours - local time - Fire Dispatch paged Coordinator 1840 to report to the Incident Commander at the Command Post at Point A. The page also notified Unit X-1 and Coordinator 1841, Marie Fowers.

Unit X-1 made contact by RACES repeater while I was enroute. He was advised to standby and have RACES X-29 (John Carrigan) come up on the repeater.

X-29 contacted me at 0300 hours, and was asked to respond to the Command Post (CP) at Point A.

The mobile Unified Command Post, Unit 850 - previously requested - arrived at Point A where it was used briefly by Public Information Officer (PIO) Captain Elwell. Unit 850 was then transferred to Point B, closer to the crash site. At 0400 hours it became the Command Post (CP) for the incident.

Following a briefing at 0430 hours I requested a response from X-1 (CRO) and Coordinator 1841.

At 0445 hours RACES unit X-29 arrived and was assigned to establish an evacuation point at Point C.

Attempts were made to contact Public Works people to open the facility, but this was not successful until 0700. Prior to the facility being opened numerous requests for assistance were forwarded to the CP by X-29 due to the age and condition of several evacuees. At one point, Paramedics were dispatched on a medical aid to the shelter.

X-1 and 1841 were asked to deliver a video camera, radios and initial supply of food, ice and drinks to the CP. On the arrival of X-1 at the CP several other RACES participants were called out and assigned to handle communications from Unit 850 (CP), assist the IC as needed and to assist at Point C.

At 1030 hours Ontario Police Sergeant Ervin contacted the CP about the overloaded switchboard at the OPD front desk and Dispatch. X-1 was directed to assign 3 RACES personnel to the EOC to handle all telephone calls regarding the incident. Three outside lines and three internal extensions were designed for that purpose.

At 1100 hours Kurt Andersen (X-2) took charge of EOC operations, which continued until 2330 hours. During that time, approx. 750 phone calls were received at the EOC.

Continues next week.

>There is a big difference between off-the-record verbal remarks from an FCC
>employee, and official policy of the commission as represented in written
>proceeding, NPRM, CFR, etc. While I am not disputing that several
individuals
>may have said this, their casual remarks cannot be considered as the "FCC
>states that".
>
EXACTLY! Any verbal remark made by a FCC employee
is worthless. And anything said by "John the navy guy" at
Laurel, MD is even more worthless. His name is John Arthur,
and he is an overpaid very low-level bureaucrat who has
absolutely no authority to discuss FCC policy. He was
incompetent in the navy and even more incompetent now,
very typical of the usual FCC employee you will talk to on
the telephone.

If it is not in writing, on official stationary, signed, and
mailed in a franked envelope, it is not worth anything.
The person who signs such policy statement must also
be officially designated to do so. I guarantee you the
person who signs such a letter will not be "John the
navy guy" at Laurel, MD!

Learn how the bureaucracy works!

>I read all three on a monthly basis. Sure, they give out fines, but
collection
>is severely lacking. It's a joke. Case in point: our friend Rich in South
>Carolina has had N.A.L.'s in excess of $10,000 levied against him. Never
paid
>a penny. Still on the air, jamming 75 on a nightly basis. His Virgin
Islands
>counterpart on 14.313 has had his license and amateur privileges revoked by
the
>FCC. He continues to operate daily. Effective enforcement? Ya, sure, you
>betcha.

Here we go AGAIN with the wrong information and disinformation.
Rich Whiten, WB2OTK, was NEVER assessed a forfeiture!
He was given a NAL, upon which he requested a higher level
review. The FCC realized that a low-level incompetent
bureaucrat in Kingsville, Texas named Oliver had made a
mistake and the NAL was cancelled. Whiten realized
that personal prejudice by a FCC official was involved.
He consequently challenged the NAL and won!

Now, unfortunately for the ham community, yes, stupid
worthless Schoenbohm, KV4FZ, is still on the air. The
FCC has not renewed his license, but because an
appeal is still in progress, the FCC has permitted him to
remain on the air. The appeal process may go on for
years as it proceeds into the federal court system.

GET YOUR FACTS STRAIGHT!

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <603>

.....
>From the Editor's Desk:
We are continuing to experience problems with the JUNO.COM server. JUNO has a rule that will not accept more than 50 deliveries from a common address. Some of you may not have received the 3/7 and 3/14 bulletins. We have them archived on the ACS Home Page at http://www.garlic.com/oes/races.htm

We have developed an ACS Award of Excellence to highlight those Internet web pages that have done an outstanding job of promoting emergency communications. To recommend a website, contact us at David_Larton@oes.ca.gov or larton@garlic.com . To view the new award, point your browser to http://www.garlic.com/oes/aoe.htm
.....

>From the mailbag:

From: NACEC Center, Minneapolis, MN USA
Here is something that I hope most of you will find of interest.
One of the services that our organization provides, is a victim information data base with high speed search and display capability called DVIS (Disaster Victim Information System). DVIS has been in operation for about a year now. If this is new to you, you may have heard of it under its old name which was D-STAR.
DVIS works like this. Victim information (data) flows into the DVIS system from the disaster area where it is then made available to those agencies and organizations that are actively involved in the disaster response, as well as those seeking information on family members within the effected area.

Data security is provided by making the victim data only available to those that have the persons pre-disaster phone number.
This method of security has proven to be successful as it protects those that have un-listed phone numbers to protect their health and safety for one reason or another. The most common reason for this need for data privacy we have seen in past disaster operations has been for protection following a divorce where the person or their children may be in danger of being harmed or abducted.
We are now expanding the way that information is collected and entered into the system. In the past, data was only collected and entered into the system under the supervision of our Response Team staff.
Because DVIS has the capability of handling information from many different disaster areas simultaneously, and we do not respond to all disasters, DVIS has not been available in as many situations as it has been needed.
Another problem that we are addressing is the fact that when we do send a Response Team to a disaster area, they often arrive several days after the disaster has occurred. This creates a delay of several days before DVIS data can start flowing into the system.
To help make sure that DVIS is usable in many more of the instances where it is needed and to get data flowing into the system much faster, we have decided to try what we believe is a much more effective approach to solving both of these problems.
We will be opening up DVIS information collection and data entry functions to Government Agencies, Disaster Response Organization, Clubs and Individuals, who are located at the community level, and also those national agencies such as FEMA who are DVIS users and who can also serve as excellent DVIS data collection points.
Because it is so important that information be collected and the data entered into the system correctly, 100% of the time, access to the system will only be allowed to those that have completed the DVIS training and certification program, which we hope to launch next month.
This program will be made available on a modified first come first trained basis, from a list of interested groups and individuals that is being compiled via a form on our web site.
Those interested in receiving information on this training and certification program when it is launched should visit the Disaster Services Area of our web site and proceed to the DVIS Training & Certification Program
Introduction page. After reviewing the information there you can fill out a form to get you or your group added to the roster of those interested in certification.
The URL to our web site is: http://www.nacec.org
I believe that with your help, the many advantages of DVIS can stand ready to quickly assist your communities on very short notice.
Should you have any questions please feel free to contact me directly.
Regards,
Mr Edward Addy, Executive Director

*Amateur Radio, when normal communications fail
.....

Current Events:

Regarding Richard Tidd's note about the West Coast Antique Fly-In and Airshow at Watsonville Airport: Being the Director of Disaster Management of the Mendicino County OES, Rick Paige has been up to his butt in alligators with the flood problems up there. Watsonville EC Bob Wiser and myself (his AEC) can help you with information and sign-up sheets. We typically need 25-30 Hams per day at the show (Friday through Sunday). Volunteering gets you a
privileged parking pass and the opportunity to see the air show "up front and personal."
Those who have helped us out in the past know what a training opporrtunity the air show is. It's the opportunity to do "real stuff" and have a load of fun at the same time. Amateur radio is, literally, the communicatons thread that ties as many as 8 agencies working together to support the air show Emergency Services Unit (ESU). Join us and come prepared to watch a great air show and be dogged tired
at the end of the day.
This year's air show's theme is Circus in the Air and will have two aerobatic acts airborne simultaneously. Among the antique aircraft this year will be a B-17, B-26, C-47, and a Constellation. We are also hoping the ANG from Moffett will be bringing in their C-130 and their MEDEVAC/SAR helo. BTW: if you have not had SEMS/ICS training, it will again be offered this year on Thursday, May 21 for air show ESU volunteers. Rick Paige, the Director of the ESU will teach the state authroized course.

For more information about volunteering to help out and/or the SEMS/ICS training, you can contact Bob Wiser, ARES EC Watsonville Op Area at 408-728-4169 or e-mail at BobWiser@al.com. Or you can contact me at 408-662-2766 before 9:00 PM any evening or e-mail at kd6ykl@juno.com. 73
-- Jim Piper / KD6YKL ARES AEC for Training Watsonville Op Area
.....

Robert Hill, N3OFZ of Monroe County, PA was named as the succesor to the position of Chairman of the SKYWARN Technical Committee for the National Weather Service. The post was vacated by Paul Toth, K2SEC as he leaves for a new position in Florida.
Hill said, "I will have some very large shoes to fill, as Paul did a tremendous job. I am looking forward to keeping the goals, momemtum and

enthusiasm of the tech committee going and in the forefront of the amateur radio community for 1998 and beyond."
The position brings with it some timely issues, such as the national QSY of the APRS frequency from 145.79 to 144.39. Digipeater owners in the eastern US will switch frequencies on the 4th & 5th of April 1998. More information will be in QST, CQ-VHF and other amateur radio publications in the very near future.
Hill and others from the tech committee also received a 'Special Service Award' from the United States Department of Commerce, National Oceanic and
Atmosphereic Administration. It was for their help in reorganizing the SKYWARN amateur radio network, deveolpment of APRS, development of the SKYWARN paging system and for SKYWARN Spotter education through organizing training programs.
The offical announcment of Hill's appointment will be made at the 34 county SKYWARN Coordinators meeting in Mt. Holly, NJ on March 1, 1998.

What's New on the Web:

http://home1.gte.net/rhashiro/am-the-impossible.htm

is a great article written by Ron Hashiro, AH6RH a Hawaii State Civil Defense RACES volunteer, who has a lot of good advice on emergency preparedness that will be a good addition to any training manual. Stop by and have a look!
.....

This week's EMCOMM Bulletin:

EMC124 HazMat Emerg. Comm 2/2 For release 3/23/98

Continuation of City of Ontario HazMat report:

Summary of Further Actions Activities by the Disaster Preparedness Division over the days course:
- 3 meals to 200 each at the incident scene and shelter site
- Several loads of ice, coolers, water, sodas delivered to personnel from various agencies. Donations from Burger King, Arrowhead Water and Smart and Final were accepted and thank-you letters sent.
- Established shelter at Point C for 600 people with population at times ranging from 25-250.
- Established communications between Command Post, EOC and shelter, keeping IC informed of all significant activities. All health and welfare traffic was passed via Amateur Radio leaving OFD TAC 1, OFD TAC2, FIRE COMMAND 1, FIRE COMMAND 2, AND FIRE DISPATCH clear for designated purposes.
- Staffed second cellular phone at scene and coordinated with CHP, trucking company, insurance company representatives, OPD etc., for dissemination and sharing of information.
- Deployed Command Post (Unit 850) which provided secure

yet accessible environment for IC and Operations Chief to conduct briefings and manage the incident.
- Provided video camera and RACES personnel to video tape incident
- Provided radios and spare batteries for use by response personnel
- Transported, set-up tent canopy for use by media (no other shade available)
- Set up flag tower for constant monitoring of wind direction.
- Opened EOC and handled public interface via telephone bank; staffed until 2330 hours
- Coordinated care of pets at shelter site w/Pomona Valley Humane.
- Provided PIO for shelter site (1841) approx.100 interviews.

Cost Summary:
Staff: 21 hours straight, 19 hours overtime
Ontario RACES - 20 participants, 210 hours.
Equipment/supplies Unit (costs details deleted.)

Recommendations: 1. Resolve access to City facilities by installing Knox Boxes at key locations - Urgent! 2. Train department PIOs for future use of IBS network 3. Make department managers aware of Command Post and RACES capabilities including ATV (amateur television) system.

The Unified Command Post was returned to quarters after the hazardous materials clean-up was completed and it was apparent that the eastbound lanes of 60 Freeway would be partially opened; this at 2300 hours. Two RACES personnel were left on-scene to provide the IC with contact to the EOC and shelter site. These two functions remained until 2330 hours, when all Disaster Preparedness Division activities related to the incident, other than clean-up and follow-up actions, were completed." (End of 2-part series.)

Found it: 10m has been internationally allocated to amateurs since
the 1928 International Radio Conference held in Washington, D.C.
(Back then the band ran from 28 to 30 Mc.)

No matter what country the unlicensed outlaws are transmitting from,
they're trespassing once they're above 28 Mc.

Do you know how to do complex arithmetic? Resistances are real and
reactances are imaginary. For example, there are some questions on
the advanced test where the numerical phase relationship between
voltage and current in a series RLC circuit is asked for. Going
through the loop, you add together the complex impedances. For the
series RLC circuit this is R + j(Xl - Xc). Then calculate the phase
angle as the arctangent of the imaginary part divided by the real
part.

By the way, I am planning to take the advance test tomorrow at the
Grays Lake, IL Hamfest.

Oris I cannot believe that not only did you run from me,you ran from my wife.Those were the greenest,nastiest,broken up excuses for teeth I have ever seen. I know why you ran from me,but from what several people told me in the parking lot you ran from my wife too. You are truly one of the most gutless hams on the air.If you ever can get a set of testicles and won't run out the door when I confront you,c'mon back. Oh,one more thing. Try to wash next time with soap. You are one greasy,scuzzy human being. If you dress your children like you dress yourself,It's no wonder DFACS is looking into your living conditions. Try to get the trash out of that t-bird,it's a real maggot farm.

If you're in Southern California, join me, Julian Frost, N3JF and Gordon West, WB6NOA for On the Air Code Practise, beginning Monday 23rd March, 1998 at 8pm. We'll be transmitting on 144.330 simplex and the WA6TWF Super System repeater cross-link which covers an area north of LA all the way down to the Mexican border.

Gordo and I will take four to six weeks preparing students to take their 5-wpm Novice Morse Code exam. After that, we'll be concentrating on increasing code speed for those that want to get their General Class license and pass the 13-wpm exam.

After the code practise, Gordo will host the "News Behind the News" net. An irreverent look at what's happening in the Ham Radio and Electronics industries... done in a way only Gordo can! :-)

So if you want to learn the code, or just increase your code speed, join us each Monday on 144.330 simplex (or on the WA6TWF Super System, if you are a member!) at 8pm. This is the stress free, fun way to learn code!

Talk to you on the air!

73,
Julian, N3JF

Actually, it has been our experience that many of those mariners that take the No-Code Technician classes go on to get their General class and use ham radio daily. While some may indeed start out with no "interest" in radio, that soon changes when they see what they can do with it, and what it can do for them. On the whole though, if they weren't interested in radio, they wouldn't even come to the class.

I had a similar Experience at one AES store when I ordered a Alinco Microphone . I gave
my credit Card info etc. The Mic never showed up after 12 Days. I called to inquire and the Salesman denied ever having a conversation or me ordering the Microphone !!

He said since the Mic was for an Older model. I now have to send in Money in advance for
the Mic and a Credit card isn't acceptable. The MGR backed up the Salesman.
Why did they take my credit card in the first place and told me the Mic would be in my hands in a week? Why not call me back and say:" Sir I made a mistake. Our policy is you have to prepay for the Mic if the Mic is for a noncurent model". I would have said Ok and send in a check or money order. I have never called them since.

Here is the Web site!!!!
http://www.hamers.co.jp/webshop/radio/index.html

You will see the FT-847 has a list price of 210,000 Yen and a street price of 168,000 Yen.
The current exchange rate is 130 Yen to the USA DOLLAR.
168,000 divided by 130 Yen is $1292 . Yet the USA Dealers want $1820 !!!
We are paying $528 More for the SAME RADIO !
We are getting RIPPED OFF !!

I made my home in Orlando for nine years and dealt with AES Orlando
many times. Only once did I receive what I considered to be poor
service, and that from an employee who left soon after my "incident".

AES Orlando seems to do a booming business with Latin American
customers so I can easily understand why they choose to employ
bilingulal staff if at all possible. Again, my experience has been that
it just isn't a problem.

My dealings with AES over almost a decade were very satisfactory, and I
wouldn't hesitate to buy from them again.

>anyone know of a modification to change the 440MHz - 450MHz to 430MHz -
>440MHz? Or is there a modification for wideband transmit? The radio came
>without a manual so any information will be gratefully received.

Thank you to all that replied to the group or personally. The
information was for a local amateur. A problem with my I/O card caused
delay in reply to you all. The following modification worked for him:

Subject: How to Modify a AT-600/HTX 204 !
With the radio on.
1. Press "F" and "0" to enter main menu. Press "14623" consecutively
until you here the confirmation beep.
Turn off the receiver and turn it back on. Now the receive
modification is done.

He now has wideband transmit allowing operation in the UK band.

Thanks to Brad, KC7SHU, for the above information.

This would be a good use for direction finding equipment, to find out where they were and, politely and calmly, trying to educate them about what they were doing. You might have to turn off the repeater until the problem was cleaned up. You might also have to consdier getting you club to offer to purchase the radios from those individuals and purhaps finding out where they bought the radios from. Purhaps a friendly word to the dealers of who bought the radios.

>
>As that frequency is "ALREADY IN USE BY ANOTHER STATION,"

If they are operating on the amateur band, consider the following.
Rather than trying to conduct normal 'amateur' communications, on that
frequency consider sending very slow cw on that frequency. They won't
who or what is gong on (got that idea from another message).

Worldwide, 28 mhz is reserved for licensed amateurs. The overmodulated, echoing, roger-beeping operators on the lower end of 28 mhz are not licensed amateurs. Were you to complain to the FCC about licensed hams "interfering" with unlicensed stations on the 10 meter ham band, I strongly doubt if they'd care. If you have the time to find out, please let us know.

In my opinion, the many echoey, roger-beeping dirtballs trashing the lower end of 10 meters have the same legal status as static, so feel free to call CQ right over them.

If you studied for your license from "Now You're Talking", most of the stuff you want is scattered throughout there in elementary fashion.

As a general reference about operating in ham radio, for modes you are licensed to use (FM, packet, etc.) and functions you can participate in (traffic handling, ARES / RACES, etc.), as well as a lot more things you can do if you upgrade to a license with HF privileges, I will recommend what I think is about the best most comprehensive book on the topic: from the ARRL, it's called THE ARRL OPERATING MANUAL. Apparently it's a new edition (and it lists at $25 now) but it has tons of reference material and a solid introduction to almost every area of ham activity.

"TwinsRadio", I'm impressed with Scott's .sig. I've worked 6 meter QRP, and I've only worked about 12 grids on 6 meter QRP SSB and CW. My CW speed has frozen around a max of about 18 wpm, and I'm thoroughly impressed with someone who can copy & send at 35 wpm. I've made a few slow-speed mobile-in-motion CW contacts, and I'm certainly impressed by someone who can do hi-speed mobile code.

Scott/NF3I can put his full name and callsign on his postings: you can't.

Thanks to the many easily convertable 10 meter rigs (which are really 10/11 meter dual-banders) sold by Ranger/Uniden/RCI/Galaxy/Emperor, the problem of illegal ops on 10 meters has gotten worse. Nearly all of these "10 meter" rigs are not sold to licensed hams.

You insult Scott and also criticize the several suggestions made in this thread, but make no suggestions on how to deal with this growing problem. What do YOU suggest?

: They're not using Siltronix VFOs and 60-watt Kris Boomers anymore.

And nearly all "freebanders" are using either low-end converted 10 meter rigs, or reworked 40 channel CBs, or "export" CBs, none of which have notch filters, IF shift capability or DSP, like most hams have on their modern multi-band rigs. So a long 100-watt CQ call in CW or one of several digital modes should thoroughly plug up their ears.

I suspect most of the illegal 28 mhz dirtballs are there because there is less interference than on the often uselessly noisy 27 mhz band, so hopefully a LOONNGG CQ will encourage them to go back.

I wasn't commenting on whether I "like it" or not; I was simply stating that what you advocate is illegal. But hey, who cares? Nobody has any respect for law and authority these days. Just do what you want and everyone else be damned. You're just as bad as the illegal outbanders whom you criticize. Actually, you're worse. A licensed amateur should know better than to engage in intentional and willful violation of the rules.

Most of the activity I'm hearing on the low end of 28Mhz is Spanish. That leads me to believe that these are Mexican or Central American stations. Others on here have come to the same conclusion.

>We just don't to let them make 10 meters a sewer pit like they have done
>on 11 meters.

Not much you can do about it really. These days, the law of the jungle applies. He with the biggest amplifier wins. Licenses are optional. Not that I particularly like this, but that's simply the way it is. The FCC began turning a deaf ear long ago, so what do you expect?

The FCC doesn't care about ham radio in general. Witness the nightly abuses on 75m and daily on 14.313. Been going on for years. Nothing happens. Nobody cares. As far as the overburdened, underfunded FCC is concerned, ham radio is simply a pimple that they wish would go away so that they can concentrate on more important issues, such as how to best sell off additional chunks of spectrum to commercial operators for top dollar.

>
>In my opinion, the many echoey, roger-beeping dirtballs trashing the lower

Calling "CQ" is legal. Communicating with the unlicensed station is not. Again, my point was not whether the FCC would "care" but rather, that amateurs set a poor example and appear hippocritical when they engage in illegal communications in order to get rid of illegal operators.

4520. Hams and Direction Finders to Assist Biologists

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-21 00:00:00 UTC
From: homingin@aol.com
Message-ID: <1998032107253401.CAA08306@ladder01.news.aol.com>
Source record: 175415

Hams Needed to Assist Wildlife Researchers

Biologists from the Canadian Wildlife Service are seeking help from ham operators and monitoring enthusiasts. Twelve endangered Burrowing Owls were being followed on their migration south from Saskatchewan last fall. Bad weather kept tracking aircraft grounded and the signals from the owls' radio collars were lost in North Dakota. Researchers think that, if alive, the owls are now in southern Texas or nearby in Mexico. They are expected to begin their northward journey around the last week in March. The exact migration time is uncertain, and it could extend to mid-May.

If you have a scanner or extended range two-meter receiver and live in central states between Texas and North Dakota, you can assist by listening for the radio tags, which emit pulsed signals near 170 MHz. They have greatest range at night when the birds are in flight. Your help is especially needed if you have portable direction finding equipment. For more information including exact frequencies, technical tips and how to contact the biologists, see the K0OV Radio Direction Finding Web site:

http://members.aol.com/homingin/

Readers without Web access can get this information by e-mailing to ARRL ARDF Coordinator Joe Moell K0OV:

I've found several beginning Tech-Plussers who love these rigs. As well they should. These radios allow them to get on 10 and make worldwide contacts for about $200. The fact that they are popular with CBers is actually a blessing. Ever hear of mass production? It lowers the cost-per-unit. Take away the huge numbers of CBers who buy these radios and the cost would be more like $400. Out-of-reach of the new ham on a tight budget. This would translate to fewer hams to "defend" 10 and more outbanders taking over. Is this what you want?

Not true. The serious operators in my area are mostly running Kenwoods,
Yaesus, and an occasional Icon. For mobiles, yes, the
2510/2600/RCI/Ranger/Emperors are common. But most of them have "big radios"
at home and the signals to match. They like the way those 100-watters drive
their 1-5KW amps.

> I'll buy
> it vs paying the $1820 from the USA Ham stores !!
> 73's NS1R Steve

Steve,

I'm gonna play devil's advocate here.....You ALWAYS say you'll "buy it" whenever any radio comes out in this country. Which radios have you purchased from Japan in the past couple of years? I thought so. You don't seem to want to listen to anything anyone tells you about the cost of freight....is it free? What about warranty? None of the U.S. companies are going to touch it if you buy it directly from Japan if you could buy it directly from Japan. Also, it would not be the same radio if you bought it from Japan...in other words, it would not be the model that is type certified in this country and it would not be legal to sell here.

Don't get me wrong Steve, I'm not trying to start a word war with you, quite the contrary...but sit back a second and think about what you're advocating. When you do find the price though, please post the shipping and insurance charges along with it to make it more presentable....and that would give you an idea, also, how much it would cost both ways to send it back for repair, if the need ever arose, and then consider which boat it would take to get there and back unless you wanted to pay the BIGGER BUCKS for faster freight...but consider the service once it gets there....who will work on it and how long will they take?

It's nice when you're floating around on the MIR and need a few transistors, that you can get at Radio Shack for $1.99, but how do you get them to where you are? They are no longer $1.99 are they? Same idea here.... Get my drift?

**** I don't speak for any company or likeness thereof, just my own thoughts. ****

You are wrong, sir. The majority of intruders use "export" radios with about 10 watts AM and 25 watts SSB. The high power boys seldom come into the 10 meter band.

You seem to have limited experience in dealing with intruders.

But these are not the subject of discussion. The Kenwood operators, etc., know enough to stay off of the 10 meter band. It is the cheap "export" radio crowd that is causing the problem.

See March QST for a more detailed discussion on the type of radio causing problems on 10 meters.

You are slinging mud again, Twinsradio. The FCC has taken a lot of action against intruders in our bands during the past several years, with fines averaging $6,000 per incident. I would hope you read publications like Popular Communications, QST, or 73, where the results of FCC actions are published for everyone to see.

Meanwhile, if you've got a problem on 20 meters, or 75 meters, start another thread. The situation on 10 meters is unique, and it threatens the entire band, not just one or two specific frequencies.

Have a friend looking for a Lafayette HA-600 short wave receiver, must be
in good to excellent condition.
Phone him at (765) 589-3153 or e-mail me and I will pass on the info

Oops, I guess then you must mean it "gave me away" as a CB'er in some spiritual or virtual sense, rather than by way of actual operations, equipment, or license.

LOL! Maybe we should have a WAVC (Worked All Virtual CBers) certificate -- perhaps I can get Wayne Green or the ARRL to print some up. CQ VC and all that. Rig here is a Bliley crystal ball into a Cushcraft pyramid. How's the new @$%^&W^% sound? Weather here fiB*&^)SDGGS but arthritis really HASWQS@$@.

Da*n, some ghost from South America QRM'ed me!

You guys are too much. Maybe Art Bell can do a show on this.

M. Baker
mbaker@monmouth.com

P.S. -- Don't forget to include your callsign on your posts, Jeff. Wouldn't want anyone to think you're not a gen-u-ine ham.

: their 1-5KW amps.

The majority of illegal signals I hear on 10 meters all have the typical
"roger beep", which is never found on hi-end ham rigs like Kenwood, Yaesu,
etc.

By the way, it's "Icom", not "Icon".

I read all three on a monthly basis. Sure, they give out fines, but collection is severely lacking. It's a joke. Case in point: our friend Rich in South Carolina has had N.A.L.'s in excess of $10,000 levied against him. Never paid a penny. Still on the air, jamming 75 on a nightly basis. His Virgin Islands counterpart on 14.313 has had his license and amateur privileges revoked by the FCC. He continues to operate daily. Effective enforcement? Ya, sure, you betcha.

No, I am not. I prefer voice: SSB and 29FM. But what do my 10m activities have to do with the topic of this thread? (licensed hams engaging in illegal conversations with unlicensed stations)

QST is a propagation vehicle for the ARRL which despises both CBers and codeless technicians. I would take anything they print with a large grain of salt.

Your are correct abour the type of radios they are using, if you notice
you always find them on a 5kHz boundry, such at 28.005, 28.085, 28.145
etc., because they are using channalized radios.

The Royal Order of the Wouff Hong. Are you a member of our Order?

Yes?

And how will you be tested?

No? Well, then, if you're an ARRL member, it's high time you participate in the secret initiation and pass through the gate!

But what is the Royal Order of the Wouff Hong?

I can't tell you. I'm pledged to secrecy. If I told you, I'd have to kill you. And then they'd have to kill me.

It's SO secret, that if you search the ARRL web site for "Wouff Hong," you turn up only a downloadable picture of the dreaded device itself, and the fact that there is an initiation ceremony at the National Convention.

You don't have to travel that far - we're holding the secret ceremony the Saturday night before the North Carolina ARRL State Convention, which happens to be the RARSfest in Raleigh. The initiation is Saturday evening, April 4th, right after the Social. The hamfest itself is on Sunday, April 5th.

But I can tell you this. From time to time, QST publishes an article describing the Wouff Hong. Looking suspiciously like a menacing piece of driftwood, the Wouff Hong is a wooden device that appeared mysteriously at League Headquarters many years ago... the 1920's, I believe. HQ staffers speculated on it's purpose and origin, and eventually reached the conclusion that the Wouff Hong is a device somehow meant for punishing hams who abuse the privilege of their license and the honor of the hobby. Yes, there was plenty of lid-like behavior back in those days, too.

If you question how well the Wouff Hong has been working, considering that there is still plenty of lid-like behavior around today, well, just imagine how bad things might have gotten if there were NO Wouff Hong!

I can also tell you this -- the initiation ceremony is fairly brief, and you don't have to stick your hands in any spaghetti-brains or peeled-grape-eyeballs like on Haloween.

Well, I may already have gone too far. A long, black car just pulled up out front, and some big dudes in sunglasses are walking to the door. Let me just say that if you value your hobby and want to do all you can to keep it right and true, and you're an ARRL member, then present yourself at the "arena" just outside the Social room in the Jim Graham building, just after the Social on Saturday night, April 4th.

When we are through with you, you will know how you will be tested.

Please feel free to pass this message on to others.

73,
Gary KN4AQ
Member: ARRL, RARS, Possom-Trot, Royal Order of the Wouff Hong

2 weeks ago I ordered a part from AES in Orlando at which time they said they would ship on the 11th of March Priority Mail. Here comes the 16th and still no part. I called AES and a Cubian sounding guy answers the phone. I ask about the part and the guy says it shipped on the 11th. I tell him the part didn't arrive and would he double check with shipping. He says, in an arrogant sounding tone, that the computer says the 11th and that it shipped the 11th, and if I had a problem I would have to contact the Post Office. I asked him again to check with shipping as computers only have what it entered in them. He asked me if I was calling him a liar. I said no I wasn't , but I really wanted him to do his job. He then hung up on me. I called back and asked for the manager whose name is Grant. Grant was helpful and said the part according to shipping went out on the 11th. He said that it the part didn't show up on the 17th to call him back and he would send me another part no charge. I informed him that would be fine but that the other guy had an attitude problem he need to correct. Alright, the 18th is here a low a behold the part arrives. But guess what, the part is postmarked the 16th. I called AES and guess who answers the phone, but the Cuban attitude man. I inform him the next time he states something as fact he sould be sure of them. He was nice this time and put me through to Grant and I inform him of the postmark. He says the package must have been left behind on the mail truck. I say sure thing and I tell him bye. Anyway, has anyone else had problems with AES since the new owners took over?

Phone lines cross your property? Other than the ones serving your own accounts, Not likely unless you have a contracted easement. Which you don't or you wouldn't be making the statement in the first place. Those phone lines running across the front of your yard are on the public right-of-way and guess what, they pay the county/state/Federal govt (as apropriate) for the priviledge. The phone company also pays the electric company if that's who owns the poles or property tax if they own them themselves.

And since the only phone lines to your own property are the ones you pay for, go ahead and tap them. (Yes, I know I am overlooking the National Electrial code and your state PUC tariffs and your implied contract with the phone company, but the CONTENT is at this point your own property)

Most of the QRM on the low end of 10M audible here in MI sounds
like women and kids shouting at each other in Spanish, using
the radios like telephones or CBs and not really the "freebander"
types. They also operate AM, LSB/USB and FM, which makes filtering
them out or QRM-ing them (if you're into that) more difficult.

My favorite sound heard on 10M during the last sunspot peak was the
QRMer who played back over and over a loud, reverb-ed "announcer"
voice in Spanish that informed the interlopers that their transmissions
were illegal and that the Radio Authorities would seek them out.
Sure scared 'em right off. Uh huh.
Can't wait till the 'spots come up again!

> Looks good in your picture, tho...
My Email address is fine and spec sheet says what I have the manual
right here in front of me ... I nowhere say it is a Collins Tuner I
claimed it was a Match to the Collins color scheme... and where do you
see that If you could read the Dummy load ratings it says that to
convert the Dummy load time ratings multiply by 3.5 for SSB by 1.7 for
CW and 1.3 for AM... it gives an example that 350wPEP is a 100 watt
average that shows on the chart a power handling capability of 8 minutes
key down... if it takes you eight minutes to tune the thing you better
get an auto tuner...where does it say that the overall power handling is
rated at 350 watts PEP??? My e-mail address is just fine thank you...
and I think you need glasses... Any tuner will not handle a kilowatt
without being tuned the graph if you can see it shows that the tuner
will handle well over a KW about 1.4 KW PEP if the SWR is at 2:1 or
better... It will handle much more than that if you tune it properly...
I hope you have some answers... Jordan... jordana@nucleus.com

1 watt, any mode, transmission line and antenna combined not to exceed 50 ft., no license. Most of what I hear is beacon and most acitivity seems to revolve around CCW or Coherent CW where the decoding is done via computer over long periods of time. Most of the fellows operating down there have a pretty good understanding of noise and how to listen through it.

Hi all,

I have for a friend the following radios:

You may email me or call him at (304) 855-4678.

Ten-Tec Omni A HF rig with matching external VFO, Vintage hand mic :) and operators manual for each item. Radio is solid state with analog dial (NO TUBES!!) Sent to Factory in 1990 for a checkup and tune-up (have documentation on that) Radio was purchased new in 1979 and has worked like a champ. 160-10 meters, 3 cw filters, ssb filter, full break-in QSK. VFO allows rx of 2 freqs. simultaneously, tx/rx from radio or vfo or vice/versa. Also in vfo are 4 crystal slots for fixed channels. runs 100 watts on 12vdc using 16amps for full output! Radio is a 9 out of 10..
PRICE IS $400 SHIPPING INCLUDED.
Will trade for the following:
Prefer solid state radio!!
Yaesu 757GX
Kenwood TS820/TS830/TS530, or similar. (looking for something with DIGITAL DISPLAY, IF SHIFT and NOISE BLANKER) with vfo or speaker or whatever... let me know what u have (excellent condition, please!!)
thanks,
Randy

4564. FS/FT: Icom IC-W21AT dualband HT $125

Newsgroup: rec.radio.amateur.misc

Hi again,
Have for sale for a friend the following radio:

IC-W21AT handheld dualbander. Includes speaker/mic, veh. power cord, hi and low cap. batteries. HAS INTERMITTENT TX AUDIO PROBLEM.. it transmits fine, but no audio sometimes. Audio cuts out with no rhyme or reason, but we suspect the speaker/mic jack as the culprit. this is the radio with the 'telephone' whisper mode so u can hold radio like handheld cellular phone. it has a mic in the radio and another mic in the battery pack for this purpose. the radio works great with dual in-band rx, cross band retransmit and rx, lots-o-features for Mr. Fix-it. PRICE IS $125 INCLUDING SHIPPING

Will also use this as 'boot' for the other radio trade (see ten tec ad)
will also trade for a 1kw (rated at more than 600 watts) antenna tuner,
prefer roller inductor tuner like a MFJ tuner or a Dentron Supertuner.
Wish list: prefer Drake Model MN-2700 tuner.
please email me or call Slade Sowers at (304) 855-4678
thanks,
Randy

> (mis)behavior at a hamfest?
Well I'll be glad to answer that.
The number of amateur Radio Operators has been falling until just
recently in the past 5 or 6 years. The ARRL started complaining to the
FCC to make testing easier. So the FCC said that the testing would be
made easier but the ARRL had to police its own. Well because of this we
have people who disrespect the air cause they didn't have to work as
hard for there ticket as the old elmers did. So what we have is a bunch
of lids. I had to go before the Feds and take my test it wasn't any of
this VE crap like it is today. That is all because the ARRL was afriad
that its book sales might go down. I will say this the ARRL is our body
in the Congress and that I'm thankful but making testing easier, no code
, VE testing, and all the stuff that make it easier to be a ham I'm not
for. I have found the harder people have to work for something the more
it means to them, and they take better care of it. So that is why I hold
the ARRL responsable for alot of the crap you see in the world of
amateur radio. Things are just to easy. But that is just the way I see
it. Mark my words as they make this thing easier the worse its gonna get
and I hate to say this I wonder how long it will be before the rest of
the world says to the great USA we don't want your Amateur radio
operators on the air anymore?
Oh the FCC is just as much at fault as the ARRL. The FCC isn't to
trusted either. I have heard from there own ranks how they will bust
someone and take there gear and instead of destroying it and throughing
it in the dumpster, they would just through it in the dumpster and a
feild engineer who I will leave nameless would pull it out of the
dumpster and resale it. So as you can see the problem is not just the
ARRL. Its going to get worse as they make it easier and easier to get on
the air. Pluys the FCC isn't going after these lids anymore either. So
that is another factor to consider. It seems to me that everyone is
trying to get the most fer least and it used to not be that way.
By the way I was at the fest at 11:30 and I left a little after 1:30 So
who eve thought of the topic is wrong I drove a hour and was there for 2

hours. :)

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

> > You can see for yourself !!!
> > 73's NS1R Steven Hershman

Yup! I stand to make millions and millions telling people to buy "locally." Geez hershman,
I
only thought you were an idiot, no longer do you have to prove it to me.

I do not speak for ANY radio dealership nor do I stand to make one red cent suggesting
people
buy domestically; "locally" was your word. Besides I think your credibility.....woops...I
stand
corrected....you have NO credibility. Also, you don't even know me and I don't know you....

I guess you want a word war.....

I do want to know hershman....just how many radios YOU have purchased directly from Japan?
In
the past year, and then some, of your telling everyone they are getting ripped off...just
how
many times have you said, "I'm going to find out what the price is in Japan and buy it from
there."...? How come you have NOT, in fact, purchased any radios directly from Japan? How
come
stevie? Why don't you back up your words with action instead of spewing horsepucky? How
come
stevie hershman is telling everyone to purchase their radios directly from Japan and he has
not
spent one red cent
doing so himself? Hmmmm? Because he wants to see EVERYONE lose out, including domestic
dealerships.

hershman, why don't you tell the good people how many times you have gone to your "local"
candy
store and have seen me working there lately. And give dates please. You don't know anything
do
you? You only act like you do. And, you keep trying to buddy up to me with your "friendly"
email to get information from me so that you can tell everyone you have a source. You

probably
planned to twist my words around to fit your own needs to spew more horsepucky....Please don't
email me and ask me anything, I just ain't gonna tell you.

I'll be waiting to hear about your first purchase of a radio directly from Japan. Then I want
the details about any duties and taxes you paid, the freight and handling, and then I want a
diode by diode comparison of your new radio with one purchased domestically. Then, when your
radio ever breaks down within the first year, tell us where you are going to send it for
repair. Do you think you can call any of the dealerships in the country and have them hold your
hand and teach you the procedure for operating SPLIT or saving the VFO frequency to memory? Do
you think you are going to get an English printed manual with it? Oh, that's right....hershman
speaks and reads Japanese.....he sees all knows all....but he doesn't do anything about it
except talk.....and we all know, like hershman, talk is cheap!!!

Anyone coming to the Boston area, you can hear hershman, LIVE, on the Waltham 146.64 machine.
Just hearing his voice once will tell the whole story......hehehehehe.... ;)

Toyota!

Try and buy from Japan. The duties, tax and shipping will kill you.
Then where would you have it serviced at? Don't be a fool.

Yrac responds:
You think you can't trust ANYTHING they print? Come on, Twins. What kind of logic is that? I think the average person can distinguish between what is editorial matter and what is news reporting. When QST publishes the results of FCC and court actions, it falls into the FACT category.

And by the way, you surely saw the article in the February 1998 issue (page 74) about a court enforcement of an FCC fine. ("Arizona QRMer To Pay Up.") Do you doubt this happened? The name of the U.S. District judge is Robert C. Broomfield. The Notice of Forfeiture was against Timothy Harold Hoffman of Phoenix ($6,000 for repeated violations). What about this do you not believe? It's a matter of public record.

Oh, wait a minute.....I recognize this game. It's called, "I don't like someone, so I choose to interpret everything they say in a negative sense." Well, sorry to disappoint you, Twins. I gave up that game a long time ago. If anybody or anything should be taken as a "grain of salt", I suggest that it is you, OM.

These are ORIGINAL, they are NOT used. I do not like the wordmint as it implies STILL wrapped in original packaging without touch by human hands. These MAY have a VERY LITTLE rubbing around the edges as they are paperback and have been on the bookshelf and have been moved from shelf to shelf on the odd occasion.

Derek:
I have a Kantronixs KAM Plus, Version 8.0 HF & VHF packet terminal. All popular modes. New in original carton. Never unpacked. It was purchased late last year by a ham who is not a silent key. It is being sold by his estate.

Original price was $300. (see AES catalog, P. 40).

If this item would help you, make an offer. I am trying to help the ham's children by selling some of the radio items for the estate.

I don't have any objections for buying the radios in Japan, but here
are some tips you want to consider:

In Japan...

- Some rigs only transmit 10W HF or 50W HF. 10W HF for no
coders and 50W for 5 WPM JA operators. The most rigs sold in Japan
are either with 10W or 50W capability... not many with 100W. Make
sure you get the one what you want...

- The band allocations in Japan are completely different from
the ones in North America. ie. 144-146 MHz for 2m, 4630 KHz CW,
7000-7100 Khz etc. ->
http://www.radiotelephone.net/amateur/intl.htm for more info.

- The warranty for the radios which are bought in Japan are
"usually" valid only in Japan (not outside of the country).

> to experiment with.

Maybe. I snapped a few of them (I figured they're pretty cool for
my children to play with) at $15/ea yesterday (my T 'R' U had them
list priced at $100!). There's two PCBs inside, an RR deck (the
actual radio) and an audio/control deck. The audio deck uses a
single-chip MCU KS56C820, a small EEPROM and an ISD storage chip
as well as some other assorted audio stuff.

The radio has a soldered-on lid that I removed (not all that easy),
revealing a half-duplex FM transceiver built using an MB1501 PLL
and an MC3372 IF. The IF uses an LC filter, not a ceramic or xtal,
which explains the fairly wide deviation and channel spacing as
previosly reported here.

The transmitter clearly doesn't run +23dBm (200mW). The previous
report indicates the transmitter runs something like -7dBm (200uW)
which looks a lot more likely after inspecting the transmitter and
noting the use of 4 AAA batteries for power. The receiver looks
like it has at least one RF amp stage, it is probably fairly sensitive
though the wide IF bandwidth is an issue.

I ended up giving them to my kids to play with.

Well I was going to let this thing go but I do beleive that this
warrants a reply. Well I don't think I raised my voice one time. I did
however get into Jim nObrain's face. He acted like he truly wanted to
fight. He backed down. He was drinking! In a prevous post "Chicken Dumb
Butt" did request for me to be there. Lets see if I didn't show I was
yellow and if I did show I was yellow. So there was no way I could win
either way. I needed a 2-meter rig for my APRS operation thats was my
justafacation for being there. I saw 2 I was interested in but the money
was more than I wanted to spend. I did not run from Mr braindead nor did
I start anything. Yes he did yell nasty things at me from a distance. I
also gave the fat slob the opertunity to follow me outside. He didn't
but he did stand at the back door and yell nasty things at me. Guys I
have been a ham for well over 20 years and I have never seen anything
like this. I do blame the ARRL for this kind of activity. They are
making the tests way to easy. When that happens we get this type of
person in the ranks. Oh it getts worse Mr nObrain sends his wife out to

follow me around the bone yard. Well guys I look at it this way she did make a point to let me know that I didn't know her. Thank goodness! Then she started to call me things that would make a sailor turn red. I was truly greatful that I married a woman that acts like a lady instead of some kind of juvinile. She went on me like a swarm of hornets. She was drinking too. Its amazing what booze will do. Before all this I did have a good time I found a SB 221 amp that my grandfather wanted and I saw a fellow that bought a NEC lap top from me 2 years ago (he is still useing it, GREAT), and we talked computers and I saw a few Athens fellows there. I did park in the bone yard but I felt that it was to cold to set up. Heres hoping that its warmer at Anderson or Hartwell I will be at both the good Lord willing. I am truly sorry if I caused nObrain's actions to embarass anyone. I really can't be held responsable for his actions. He needs a straitjacket. I can also imgine the list of lies that will come from him after this post.
Anyway I thought that I would post what happened at the radio show. At least you get to see my side of what happened. For those of you that beleive the brainless wonder well I'll pray that he doesn't lead you down a path of lies.
73 and best wishes
Oris

I think what the gentleman is requesting is the FCC's written policy.
Given how government lawyers twist the law/regulations for whatever
the fad (political) of the day is, I would say having written policy
is a safe course. Even written policy does little good with such
institutions like the IRS. Their lawyers do not even know what the
policy is, so it is interpreted on the fly. You were in the military,
you know how regs can be blown off for years then become the hot issue
of the day. Do we really think that the FCC, congress and the press
will forget us forever?

Look at the IRS. Not even their attorneys know what the regs state.
It is all interpreted on the fly!

The scarely part is that we assume that we will be forgotten by the
FCC, congress and the media. Nothing is forever. Someday, something
will happen then all hell breaks lose.

Political fads come and go. The military has regs that no one really
enforces. Then one day that is the big issue and out you go.

Much as I don't care for either the ARRL or Mr. O'Brien's antics, I have to question your logic here. How is the ARRL responsible for personal (mis)behavior at a hamfest?

4589. Re: Who Was That Woman?

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-22 00:00:00 UTC
From: Tony B <none@no.net>
Message-ID: <6f3pat$d61$1@usenet47.supernews.com>
Source record: 175268

The woman was Jimmy's xyl. I've had run ins with
both of them. I was at the hamfest, but they did not
spot me. Both are still active on CB, causing
problems.

It seems to me that no brain issued a challenge
to Oris in this very newsgroup. Oris showed up and
Jimmy paniced. No brain then sent his wife outside
to curse & scream at Oris. Her voice was still hoarse
last night.

Now, if Oris took up No Brain's challenge & showed,
what does that say about No Brain?

I too, would like to know who was running the video
camera off to the side? I saw the person briefly, but
went back to watching the show & Jimmy's xyl
swearing & cursing at Oris.

Toby B (call witheld, but No Brain probably can
figure out who I am)

> Oris

What a gutless moron. I sure am glad I do not have to post lies to cover for my visible cowardice. This idiot fled the fest the minute I got in his face. And every ham in Atlanta saw him sprint out the door. I have not drank anything all weekend. I sure needed a drink when I caught a whiff of Oris's BO though. You really should try to put on fresh clothes every day and at least try some soap and water.You are truly the dirty laughing stock here in Cobb County. And like my friend told you when he ran you out of handicapped parking,your not disabled. Get your green and black snaggle teeth pulled,wash your distorted body with some soap and water(for a long time),get a haircut,get off of drugs,get a job,and grow some balls. Then come on back you pathological lying gutless scrounge. I sure hope DEFACS gets your kids before it is too late.

4591. FT-Manager CAT SW for Yaesu

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-22 00:00:00 UTC
From: Laurent LABOURIE <llabourie@nordnet.fr>

Hello

I uploaded FT-Manager V1.4, latest release of my Windows 95/NT software
optimized for Yaesu rigs (shareware).

FT-Manager V1.4 now supports :

YAESU FT-757/767/840/890/900/920/990/1000MP/D
Including : full real-time monitoring, Web cluster, Log-book, band scope,
Short Wave data base, rotator control ... and fixes...
To download at http://ourworld.compuserve.com/homepages/f6dex

I am waiting with impatience the Yaesu FT-847 and the ability to interface
PC & TX
at 56000 bauds ! (only 4800 bauds for other transceivers).

Soft990 MS-DOS SW (freeware) always available for
Yaesu FT-840/890/900/920/1000MP/D

Best 73 - Laurent F6DEX

Poor Poor Oris,has to answer his own posts.The only lip anyone saw at the fest was your dirty lower lip pooched out as you fled from myself AND my wife. You were so scared when I saw you I think an angry toddler could have ran you off. Clean all that trash out of your car,give your greasy,dysfunctional trailer trash family somewhere to sit.After seeing your mouth for a fleeting second Saturday before you ran I think next time I will bring an oven mit to protect my hand...

> We are paying $528 More for the SAME RADIO !
> We are getting RIPPED OFF !!

Yep they sure are taking us to the cleaners, get back to me when you get finished talking to the import broker, oh you didn't think they were going to drop ship it to your door did you? Import brokers are very cheap, they shouldn't charge much more than a few hundred dollars to process your order after you pay the import taxes.. Have you decided on shipping yet? There are only two ways off the island AIR or boat, Air frieght is pretty cheap these days, haw haw...a lightweight radio shouldn't run you much more than $50 to $75 to ship air.Of course then there are UPS charges once it hits Seattle or SF. Or you could ship by boat, thats usually only a 3-4 week delay with another week to clear the broker, let's not forget all the long distance phone calls to the broker on the west coast when your shipment is held up because something wasn't right on your documentation. Of course we should not forget the dealer in Japan, does he really want to hassle with this transaction? I had to make a purchase once for my company, since the dealer in Japan did NOT accept Master Card / Visa we needed to write a check drawn on a Japanese bank.
That wasn't a problem for us, but it may be for you.

I work for a Japanese company Steve, when we opened up South America it took months to get things running smoothly through customs and brokerages. As an invidual it simply is NOT worth the hassle. TRUST ME, your not getting ripped off.....
After going through the experience you'll appreciate why we have dealers in the US. Of course you may have found someone who can buy direct from Japan, but if they could save you a few

hundred bucks I'm sure EVERYONE would be buying from them.

While the ARRL is not responsible for the actions of an individual, if it was an ARRL sanctioned hamfest (prize give aways, benefits etc.) then I would expect the ARRL to have some input on the hamfest activity, e.g ejecting types like Jimmy and his wife for yelling profanity or derogatory remarks. Although the bottom line is they are a publisher and lobby organization for radio amateurs, not baby sitters.

SB DX @ WW $OPDX.349
Ohio/Penn DX Bulletin No. 349

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 349
BID: $OPDX.349
March 23, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, K6EXO, W7BX, N8PZD, CT1ETE, CX8AT, DJ5AV & DX News Letter, G4BUE & DX News Sheet, IK5MDF, JA1ELY and ZP5AZL following DX information.

3V, TUNISIA. Giovanni, I5JHW, will once again be active from 3V8BB. His activity will be from March 25-31st. Also joining him will be Sergio/ I5SNR, Danio/I5OYY, Gabriele/IK5ZTW and Roberto/IK5FTQ. The group will be active in the upcoming CQ WPX SSB Contest as a Multi/Single, possibly as 3V5I. QSL via I5JHW.

8Q7, MALDIVES (UPDATE). Lorenzo, IM5MDF, states he will now be active from Alimatha Island (IOTA AS-013) as 8Q7DF, May 2-10th. His activity will be on 80-10 meters and he provided the following suggested frequencies: 3780, 7080, 14180, 21280 and 28480 kHz. His equipment will be a Kenwood TS-50 w/AT-50 tuner using a "new Multicres Vertical Multiband" antenna and inverted "V" dipoles. QSL via IK5MDF. For updates, try the WEB page: http://www.qsl.net/ik5mdf

A4, OMAN. The "DX News Sheet" reports that the Royal Omani ARS (ROARS) hopes to be active in the last week of March, probably as A43DI from Daymaniyat Island. There is planned activity on 6 meters with IC-706 and 5 element yagi. Also, a 6m beacon, probably on 50100kHz, will be available. Permission has not yet been given for general 6m use in Oman, but Tony, A45ZN, is ready to be active when it is given. He will use a FT-690 and IC-706, 100W to a vertical and 5 element yagi at 60ft. Tony will also run a beacon on 50110 kHz.

A6, U.A.E. Bernie, W3UR, Editor of The Daily DX, reports that Ali's, A61AJ, station will be very active on all bands CW and SSB from March 21st through April 1st. Ali will also be active full time during the CQ WPX SSB Contest. By the way, Bernie is the QSL Manager for Ali and states a very nice color photo QSL card is available. QSL via W3UR,

Bernie McClenny, 3025 Hobbs Road, Glenwood, MD 21738, USA. He mentions no E-mail bureau cards.

CV8, URUGUAY. Look for Al, CX8AT, to be active during the 1998 CQ WPX Phone Contest (March 28-29th) using the special callsign CV8D. He states for QSLing to PLEASE send via his regular callsign CX8AT. All returns wil be sent via the bureau.

EP, IRAN. The "DX News Sheet" reports Hamid, EP3HR, is active, especially on 17 meters. Check 18150 kHz between 1400 and 1500z. QSL via I2MQP or direct to Hamid Reza Rahimi, P.O. Box 71555-158, Shiraz, Iran.

JAPANESE IOTA. Seven JA operators will be active from Awashima (IOTA AS-117) in the Sea of Japan. Activity will be for only two dates, April 17-18th. Operators will sign JG1SZE/0, JJ1SLI/0, JP1TBG/0, JQ1ALQ/0, JI3DST/0, JR9MAR/0 and 7K4FGQ/0. The group will set up three stations and operate on 40-10 meters CW/SSB. QSL via JARL Bureau to their homecall or direct.

JW, SVALBARD. Ragnar (Rag), OZ8RO, reports to OPDX that he has been bitten by the Artic bug again and will be active as JW5HE, April 3-9th. If he can get the computer/modem operational, he will spend some time on RTTY this time. Otherwise, he will focus on 10 and 18 MHz and possible 24 if there are openings. QSL to OZ8RO CBA.

KH0, MARIANA ISLANDS. Zorro, JH1AJT, will be active from the island of Saipan as KG6SL. Activity will be mainly SSB on 40-10 meters. The length of his stay is not known. QSL via home call. Meanwhile, KH0AC was heard on 15 meters this past weekend on 21255 kHz at 2215z and 21295 kHz at 0215z. QSL via K7ZA. Also heard on 15 meters was Larry, KH0I, on 21280 kHz at 0145z. He was also heard on 80 meters (3793 kHz) beginning around 1300z.

NEW PREFIX. It has been reported that Terry, VR6TY, on Pitcairn Island, has stated that the VR6 prefixes will switch to the VP6 prefix beginning May 1, 1998. The VR prefix was apparently given over to China on or about the same time that Hong Kong was returned (July 1, 1997).

OTHER NEW HAT TO WEAR. According to the "ARRL Letter", the current ARRL DXCC Manager Bill Kennamer, K5FUV, will replace Chuck Hutchinson, K8CH, as Membership Services Manager at ARRL Headquarters effective April 20. Hutchinson is stepping down and into a part-time role for medical reasons. The "Letter" did not mention whether Bill would be replaced or stay on as DXCC Manager.

PACIFIC DXPEDITIONS. Members of Yamato ARC (JA1JQY, JA1KJW, JA3MCA and JA8VE) will be active from Tuvalu (T2) and Fiji (3D2). The group will be in Tuvalu from April 25th to May 1st and their call signs will be issued upon their arrival. They plan to have three 100 watt stations on 160-10 meters CW/SSB. From May 2-3rd, they will be active from Fiji as 3D2HI (JA1KJW), 3D2KZ (JA8VE), 3D2SH (JA1JQY) and 3D2TK (JA3MCA). QSL via their home callsigns.

PORTUGUESE DX NET. Paulo, CT1ETE, reports that the Portuguese DX Net will be reactivated again. The net will be held on Saturdays between 1000 and 1200z on 21280 kHz or 28480 kHz. Net Controller will be CT1ERK.

QSL INFO AND NEWS.....
You can now look up your QSOs for the ZL7DK operation on the WEB. The QSOs listed are by band and mode (no times). Check out the WEB site at:
http://ve7tcp.ampr.org/cgi-bin/zl7dk
or
http://wwwiti.cs.uni-magdeburg.de/~hoeding/hamradio/zl7dk_main.html

Mike, NF4W, states he would like to become a QSL Manager for a DX station and mentions he has plenty of time to take care of business. Mike can be reach at: Michael W. Taylor, 115 Crompton Drive, Pelzer, SC 29669. His E-mail adress is: nf4w@mci2000.com

SPECIAL EVENT (Submarine Memorial Radio Reactivation). On April 25th and 26th, the radio rooms on as many as 23 memorial submarines will come alive with ham activity. This year's lineup will include the Torsk in Baltimore, the Cod in Cleveland and the Growler in New York City. The suggested frequencies will be 3843, 7243, 14243, 21343 and 28343 kHz. QSL information will be available on the air. For more information, E-mail Jim Flanders, W0OOG, at jaf@sprintmail.com

S0, WESTERN SAHARA. Look for S08R and S0RASD to be active on the air between March 24th and April 20th. Activity will be mostly on 40, 80 and 160 meters, but 20/15/10 meters will also be used. Reports indicate that the area shall become independent and may receive a new prefix in 1999. QSL direct to EA2JG, Arseli, Barrena 6, 01408 Luyando Alava, Spain. For more information, a WEB site has become available at the following URL address: http://web.jet.es/rasd/

S2, BANGLADESH. Mamtaz (YL), S21J, has been quite active on 20 meters (between 14200-14216 kHz) this past weekend between 1230 and 1400z. QSL via Mamtaz Shahid, G.P.O. Box 3512, Dhaka-1209, Bangladesh.

USI/IOTA ALERT. The group from the USI Award informed OPDX that Dennis, AA3ID, will be on Hatteras Island (IOTA NA-067, USI NC-005S) from March 16-28th. He will have 80-6 meters available. They indicated that if you need this island, try giving him a call on 14260 or 14265 kHz because Dennis will be monitoring while doing "useful" work down there.

VK9, NORFOLK ISLAND. "The 59(9) DXReport" states Jim, VK9NS, is now active on RTTY (No QSNs mentioned). His activity on 160/80 meters continues. Check around 1831 kHz between 1115 and 1145z and on 3507 kHz at 1100z. Jim can also be found daily on 14222 kHz beginning about 0400z. QSL direct to P.O. Box 90, Norfolk Island, 2899 Australia.

XV, VIETNAM. Torsten, XV7TH, was heard active this past week on 28500 kHz (long path) around 1430z. He was also heard on 14195 kHz around 1500z. Meanwhile Charlie, K4VUD, who was recently in Nepal and work Torsten from 9N land, states that XV7TH can be found on Sundays at 1000z on 21250 or 21179 khz.

YB, INDONESIA. Jorma, OH2KI, will be active until March 30th, either as XYB9BV or YB9/OH2KI. Activity will be mainly on CW. QSL via OH2KI.

ZP0, PARAGUAY. Tom, ZP5AZL, will be using the special callsign ZP0Z in the CQ WPX SSB PHONE Contest. He will be in the contest as a Single Op 20 meter Hig Power entry. QSL via W3HNK or in Paraguay via ZP5MAL.

1998 Visalia DX Convention. The Southern California DX Club is pleased to announce the programs for the upcoming DX convention. The dates for the convention are May 1, 2 and 3rd. More information about the convention, including a list of hotels, a registration form and the complete preliminary program, can be found at the following WEB page:
http://www.primenet.com/~scdxc/dxconv98.html
Or E-mail any inquiries to: visalia@scdxc.org

>They statement was that since they are
>not licensed to use the amateur bands, then you will not be considered
>to be causing them interference.

This is a widening problem, as the "freebander" operators discover the other bands on their ham rigs, and by all-band verticals(or build something).

Now, in addition to the serious problem on the low end of 10m, you will find illegal operators on WWV at 10 MHz, on the low end on 40 m, around 7.0- 7.010 MHz, unidentified commercial users on 21.115-.25 MHz. I'm sure there are other freq.s as well. Because most of these problems(but not all) are eminating outside the USA, we have only the State Department as help: they would have to make a protest to the foreign governments where the pirates are located. Given our own FCC's impotenance in enforcement matters, what hope is there for action on the part of gov'ts with the "manana" mentality?

As for the Northern Hemisphere, there are problems with Canadian fishermen using ham bands when out in the Atlantic, Louisiana fisherman trolling for shrimp in the grass near the Gulf Coast, and Vietnamese fishermen of the Texas coast. These last two are frequently heard here in Colorado, and clearly within the jurisdiction of our FCC.

Tuning for intruders is easy to do. First look for mode discrepancies, ie, AM on non-traditional frequencies, LSB on frequencies usually devoted to USB, and vice-versa. Then, listen for strange operating customs. "CQ" in Spanish sounds like "say koo," so someone calling "hola" (hello) instead should draw your curiosity. Then there are the "roger beeps" and echo boxes and other sound effects that are not used by hams. Finally, listen for female voices(sorry ladies); female ops in this country are still unusual in spite of an egalitarian society, so you can infer how rare the licensed YL must be in the more traditionally male-dominated cultures.

Ignoring the growing problem will not make it go away. One wonders if all the requests that we see for "MODS" to every kind of gear are not feeding into the mess. Look at the adverts. for used equipment and ask yourself what is the reason for gear to be listed as "11m mod." Sellind and advertising equipment in this way is, in my opinion, contrary to the best interests on ham radio.

Your email address is no good, so I'll post publically here.

The KW antenna tuner is not a piece of Collins equipment, as you suggest on eBay. Nor will it handle a kilowat if there is any appreciable swr(above 1.8 to 1, according to the spec sheet).The bulit-in dummy load is good for a kw for 8 seconds, and the over-all power handling of the tuner is suggested to be limited to about 350 w PEP with swr.

TwinsRadio <twinsradio@aol.com> wrote:
>Calling "CQ" is legal. Communicating with the unlicensed station is not.

No one here has said they communicate with the illegals. One fellow said he will go on AM and inform your illegal friends that they're trespassing, but that's a one-way transmission, not a two-way communication.

>Again, my point was not whether the FCC would "care" but rather, that amateurs >set a poor example and appear hippocritical when they engage in illegal >communications in order to get rid of illegal operators.

The FCC's opinion is what matters, not "twinsradio@aol.com," and the FCC's opinion is that amateurs are not operating in an illegal manner. Reading your posts on rec.radio.cb, I can see why you might be bothered, though.

> The warranty for the radios which are bought in Japan are
> "usually" valid only in Japan (not outside of the country).

How true.

I checked Friday out of curiousity and our service department currently has eleven ICOM radios in for service which some clever people purchased outside the U.S. and brought in.

I believe all of these would have been warranty if they had been purchased domestically. We will not be able to charge any of the repairs to ICOM under warranty, which is many hundreds of dollars of repair bills we otherwise would have charged to ICOM instead of the owners.

It's a roll of the dice on service. If you're certain you will not need warranty service, then go ahead and buy overseas, but then don't whine to the service places when they can't put in a warranty claim for your new whatever. We give the owners every break we can, but we have a contract with ICOM we have to observe on warranty repairs.

One repair bill you have to pay for out of your own pocket will cost you more than you saved buying overseas. Maybe a lot more.

The newest models are the ones most likely to need service. If you buy an early production anything, you are serving as a guinea pig. Unless you have a warranty, this can be expensive.

I bought a used ADI AT 200 HT and need a set of instructions for it.
If any one has a set that they could copy and E mail I would be grateful. I
am trying to get my son interested in ham and thought that this would be a
good radio but it is a little hard to program.

Advising an illegally transmitting station that they are in violation
and on the wrong frequency is not considered illegal communications with
unlicensed stations by the FCC. The point of the matter is that as
responsible Amateur operators, we are EXPECTED by the FCC to advise others
that they may be in violation of FCC regulations. To do so is hardly a
violation of the rules...

4630. *RS HTX-100 Speaker Audio Problem, please HELP!*

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-22 00:00:00 UTC
From: teenham@aol.com
Message-ID: <1998032203583500.WAA16273@ladder01.news.aol.com>
Source record: 175309

Hey there...

I have Realistic HTX-100 10 meter mobile. The problem is the following: I cannot control the volume on the radio. It doesn't matter where I set the Volume knob, the sound is always very low from the internal speaker. I have tried headphones and same problem. The only way I can really hear the radio is if I connect it to an external amplifed speaker (if it's not amplified the sound is same as it is from internal speaker). The RX and TX fine, and all controls work fine. Any ideas? I do have the schematic for the radio, but don't know where to even start to look. Any input on this subject, or on the HTX-100 in general, is very much appriciated. I'm hoping to upgrade to Tech Plus in May, and really want to get this radio fully working, so PLEASE HELP!! Thanks.

Since when did retail profit become news? Buy and resell at a some margin - if your margin is lower, you get the customers - it's called competition. You do it well enough and they will lower their prices to compete. Doesn't anyone study free market economics any more? "Ripped Off" is a term that suggests you "deserve" a better price for no effort, why? 73, DavidC AA1FA

The is no longer any law that says you can not bring in "grey" market goods, as long as they meet US specifications HOWEVER, the laws also state that the US subsidiary DOES NOT have to honor the warranty for imported "grey market" goods. You are certainly taking your chances. Including the fact that you may be buying remanufactured (read-initial defectives)that are marketed as new, you are definitely taking a chance in trying to save a couple of bucks

Can you spell caveat emptor??? I knew that you could

This coming from someone who hides behind a handle. Question: why give
a call on the radio when someone can just look up your call, then have
almost anything, including birthdate, at their fingertips. Whats the
difference here? By the way, if this newsgroup with all it's childish
banter is your idea of intelliectual conversation, then you must be
easily impressed. One more thing, I was never a regular on 94.5.so
get your facts straight. Nuff said other than the old saying on 3.898
which is no call, no balls.

4641. I am looking to talk to people who go to hamfests and radio swaps...

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-22 00:00:00 UTC
From: d-b-x@iname.com
Message-ID: <6f2b42$9th$1@nnrp1.dejanews.com>
Source record: 175320
Cross-posted to: rec.radio.swap,rec.radio.cb,rec.radio.amateur.misc

I buy and sell used audio equipment made a company called
"d b x" that went out of business in 1991.

I just bought a few pieces from a ham radio enthusiast
who said he sees the stuff all the time at hamfests and
radio swaps.

I live in Maine, and don't get to travel south much, but
if anyone out there who goes to these things is the least
bit interested, I'd be glad to send you a list of what I
am looking for, and how much I normally pay for it...who knows,
it might be a great way for you to make a little money while
you're shopping for stuff that *you* want.

I have close to 50 recent buy/sell/trade references that I
would be glad to give to you on request. I would also be
glad to call you on the phone to talk more about it if you
want.

If this sounds like an idea you'd like to consider, please
email me, or call my toll-free message number: 888_329_1410.

Thank you.

Sincerely,
Den nis Hut chins

Greetings all!

The CQ6 Chat has been opened for a week now, and the turnout has
been *great*! We're having a little problem with the users not being
very well aquainted with ICQ Chat, but I believe that will remedy
itself in time.

If you would like to join us in the chat, you first need to get the
ICQ program. It's free, and available from: http://www.mirabilis.com
It is not only a chat program, it'll also keep track of your friends
online status, allow instant messaging, file transfers, and more!
After you have the program, search and add the CQ6 CHat to your
contact list.

SEARCH BY:

E-MAIL
ham_radio@usa.net

UIN#
9384108

New Users will recieve the intro to the CQ6 Chat in their e-mail.
C'mon out and see us... the more, the merrier! I'll be looking for
you, 73.... Mike/KF4HYB your host.

Dear All,

I have updated the demos for the following packages on the AOR website:
http://www.demon.co.uk/aor/

AR5000 Tuner (from AOR Spectrum Master)
Hawk for the SDU5000 (also available in Spectrum Master)
AR7030 Tuner (from AOR Data Master)
Searchlight for the AR3000A

The demo version now match the full versions.

Please note that the ftp site we have used currently has a limit of 64
users, so if you have trouble connecting please try again later.

Alternatively, you mmay have better luck using an ftp tool to reach the zip
files direct in the following locations:

ftp://ftp/demo.co.uk/pub/ham/scanners/

or

ftp://ftp.demo.co.uk/pub/ham/swl/

Good luck.

Simon

>>channelized frequencies when selecting a spot for a CQ.
>
>How about posting that info online so I'll know where to go for a QSO?
>
>

The entire chart is a bit lengthy, as it runs from 26 Mhz all the way to 29 MHz. However, here's the info in a nutshell.

In our 10 Meter band, the channels are spaced 10 KHz apart, beginning at 28.005. Example: 28.015, 28.025, 28.035 etc.

28.085 deserves special mention. For several years, the trucking industry "adopted" this frequency as a "company channel." Drivers used 28.085 as an "intercom" between trucks as they rode down the highway. Intense monitoring, combined with interaction with trucking companies across the US, reduced the amount of trucker traffic on this frequency, but you still hear some independents using it occasionally.

Common modes are AM (esp. on 28.085), FM, USB and LSB.

Have a look at this:

http://www.mnsinc.com/bry/73khz/g3tdz/g3tdz.htm

Great project for those who want to get on the new 160-190 kHz band OR for
British Amateurs needing a great rig for 73 kHz

The design is for a 73 kHz phasing SSB transceiver, but I am sure it could be
adapted for 160-190 kHz by an enterprising USA ham.

How about it all you W-s ???

>I stopped dealing with AES/Orlando several years ago for this very reason.
>That store is full of Puerto Ricans who are arrogant, incompetent, and speak
>poor English. Try their flagship store in Milwaukee. Real Americans who
>speak
>real English.

I was in the Orlando store about noon on the 18th. Let me just say that they are extremely busy--the phones kept ringing the entire time I was there. Nevertheless, I got some good help at the desk from several of the staff. I was comparing FRS transcievers, and they let me line them up on the counter to look at ease of use. I also was handed the instruction books, which I wanted to read before making a selection.

Anyone familiar with this part of the United States will understand the necessity of having bi-lingual personnel at the front desk and on the telephones.

Sorry to hear about your trouble. However, if you look at the dates/days of the week, you will see that they only had to miss one day to create the situation you describe.

Wednesday, Mar. 11.....Order placed
Thursday, Mar. 12.....Order processed.
Friday, Mar. 13.....Order corrected, or missed mail run.
Saturday/Sunday.....No activity
Monday, Mar. 16th.....Order postmarked.

I also note that your sequence of events involves both a Full Moon and Friday The Thirteenth. Thus, the entire problem is your fault for not selecting a better time to place your order. <grin>.

>have to do with the topic of this thread? (licensed hams engaging in illegal
>conversations with unlicensed stations)
>

Dear "Twins.R":

Allow me to answer that. The topic of the thread is how to deal with the CB intruders on 10 Meters. Therefore, your operating habits would be significant in evaluating your comments. If you are not "down there" slugging it out with the pirates, you hardly qualify as someone who should be giving advice on how to handle it.

So let's try this.....Have you ever had an illegal operator break into your SSB QSO to ask for a signal report? If so, how did you handle the situation?

Dealing with intruders has been an ongoing project of mine for the past four years. My experience includes frequent operating in the CW portion of the band, writting to and calling Gov't officials, giving input to ARRL leaders, actually DF'ing intruders in several southern states (most of them truckers on 28.085), and yes, experimenting with "jamming" techniques. I have antennas which can beam my signal into some of the known trouble spots of the world, and I have burned up several pairs of 572-B's pumping out 1KW of RTTY and CW.

I mention this only so you will know that I am not just sitting at a keyboard, engaging in an "logical" discussion on an "ivory-tower" level. I'm down in the trenches, working on the problem and seeking solutions. I've spent a lot of dollars trying to defend our 10 Meter band--and not just in 572-B's. For instance, I am one of those who maintains a 10 Meter beacon around the clock so folks will know when the band is open. The goal is increased utilization of 10 Meters so intruders won't find an empty frequency when they arrive. But it isn't inexpensive. You have to dedicate a keyer, transmitter, antenna, low-pass filters, a 12-amp power supply, and a lot of cooling fans, to a cause which never results in a QSO or makes points in a contest.

Another thing I do to help the fight is to write to hams whose calls are published in the results of any contest which involves 10 Meters. I send them a copy of the CB industry's frequency chart--the one that shows the channel numbers assigned to our band. I ask for their help in transmitting on the channelized frequencies when selecting a spot for a CQ. I also write to the

presidents and CEO's of truck stops which sell Amateur gear advertised as "The World's Most Powerful CB". This program has been extremely successful. The last year for which I totalled the postage was 1995, and it was $132.00, not counting costs for printing and envelopes. That, Sir, is money I could have spent cheerfully at a hamfest. But I really enjoy this hobby and I feel like giving something back. This is the avenue I have chosen.

If any of this is "over your head," then here's something you can take away from this exchange--in plain language:

*You can't convince me (and my like-minded friends) that our efforts won't work. We've seen success!

*You can't convince me that what we're doing is illegal. The FCC has told us otherwise.

*You can't convince me that we are all alone out here. See the lastest issues of QST regarding taxi drivers who are using 10 meters for dispatching, and how the FCC and the Taxi Licensing Bureau are dealing with the situation.

If you are not part of the solution, you may be part of the.....well, you know!

73,
Paul K5PF

If you are familiar enough with the illegal operators in your area to know what type of rig and amps they run then you must be in a position to know who they are. So tell us what you are doing to help them see the errors of their ways in causing interference to licensed legal operations? As an amateur radio operator you are obligated to help self police the ham bands. It is expected by the FCC.

>
> Kï¿½MB
> Looks good in your picture, tho...
Well I found out where you are getting you information and why you are misinformed... in the July 1972 review of the KW-107 tuner it staes that the maximum power should be limited to 350 wats PEP into a high-impedance load such as a voltage fed long-wire ... it also states that it will handle 1 KW when your SWR is below 1.8 to 1 ... try running your MFJ at 1 KW into a 1.8 to 1 SWR antenna and see how long it takes before the plastic parts all melt!!! ... On top of all that this is a KW-109 Tuner which is an even heavier duty tuner than the 107... If you lok at the schematic of the 107 and the 109 which I have placed on the E-Bay ad you may see quite a difference... 73 de Jordan... VE2SWL/VE6...

Garry,

I live in MD and don't know of a "Shady Grove" hamfest...?

Perhaps you are thinking of the Gaithersburg hamfest, which is near
Shady Grove Road...?

If so, it will be around the 3rd Sunday in September.

If you can get a couple of students with ham licenses to help out, something like this would be tailor-made for packet radio on 2m or 70cm. Equipment may already be available for loan, or you would need two HTs and two packet boxes, plus associated connections, total cost to you would be roughly half of the commercial product.

Failing to find hams, you could always go to Radio Schlok and get a pair of iternerant-band HTs and do the same thing. A pair of 1w radios would be more than enough to do what you need to do.

I have for sale a Kenwood-Trio TR-7400A 2 meter transceiver.. Unit is synthesized, no PL's. Has 25 watts on hi power and 6 on low..Covers 144mhz to 147.99 mhz, does +/- 600 splits.

I have just gone throught the radio, and it is in excellent physical condition. I have a copy of the manual, and the microphone, but no mobile bracket. Radio runs off 12 VDC.

Asking $100. This is a rugged radio!

Thanks

Steve-WA6GSD

4703. Yaesu Ft 8100 R Freeband Mod Now Avalible

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-23 00:00:00 UTC
From: _Mac_ <mcgyv@hotmail.com>
Message-ID: <35161878.614F@hotmail.com>
Source record: 175211

Software mods for the FT8100 ver:1.00 date 03/98

Ingra-Beton@t-online.de and mcgyv@hotmail.com

The FT8100 uses a little bit differend aproach for
the up/download. It is not possible to change the
Country Codes via Software. The firmware and EEPROM
is a little bit bigger so a secure check can be
done and if the Hardware configuration won't match,
the FT8100 is refusing to accept the data file.

There must be anyway either a Secret menu or at
least 3 Jumpers for setting the country code.

But as usually Software rules, so it is possible
to move the lower and upper limits for RX and TX.

With this way the FT8100 will FULL OPEN and can
be used on all Frequencies for RX and TX where
the Hardware will allow it.

You will get a FREEBAND mod and the good thing
is that the ARS will still work.

To make the mod you will need the ADMS 2D Software
and a HEX editor or just visit:

http://ww2.sd.cybernex.net/~mcgyv/

where you can download the allready patched .RDF file
It does not matter what Hardware mod you have (or have
done) or for witch country your FT8100 is configured.

Technicaly you are only moving the limits for
the Frequecny dealing.

Make a .RDF file and edit it with a HEX editor.

The values on the following addresses are defining
the lower and upper limits for RX and TX on the
VHF and UHF bands

Band Lower limit adr Upper Limit adr
==========
VHF RX 0A66 and 0B2A 0A6A and 0B2E
UHF RX 0A76 and 0B8F 0A7A and 0B93

VHF TX 0A6E 0A72
UHF TX 0A7E 0A82

Value example:

VHF RX 0050 0280
UHF RX 0280 0650
VHF TX 0050 0280
UHF TX 0280 0650

If you insert the values from the example in the
abouve addresses, the FT8100 will be opened for
RX and TX from 50-280MHz and 280-650MHz.

After modification the following results are
mesured.

RESULTS:
Upload: Free.rdf & Stock.tpl (see web page:
http://ww2.sd.cybernex.net/~mcgyv/)

VHF:

RX 50.00 to 109.995 TX red light active on 80.00 to 109 (not
sure if it really TX'ing)
Also all the digits "X" are flashing.
Example: 50.XX to 109.XX

RX 110.000 to 136.995 Same as above, but has the "AM"
displayed.Also all the digits "X" are
flashing.But this is only between
110.XX to 111.XX twoards the 110.8 MHZ
range, the
flashing seems to slow down in "pulse"
(notblinking as fast.)

RX 137.00 to 210.630 Does TX but not tested for RX on a scanner.

RX 201.630 the .630 starts to flash. The 201. does not flash.

RX from 201.63 to 205.995 flashes, however still unknown if it is true
TX.

RX 206.00 to 280.00 TX but unknown if it is true TX

==========

UHF:

RX 280.000 to 550.000 TX light is on, but need to chek for true
TX

RX 551.00 to 650.000 TX light is on, but need to chek for true
TX, also 551.XXXto 650.XXX blinks

RX 750 to 869.00 NO TX

When at 750.00 , if you cycle backwards...you end up at 550.00...rotate
forware to get to the 600.00MHZ band

RX 894.00 to 1330.00 No TX

==========
Remember, the Mars/cap mod is not required to do this mod.

This mod is a product of the intercontinental
digital cooperation between:

Mazedonia - Ingra-Beton@t-online.de
USA - mcgyv@hotmail.com

East and West, together on the Net.

the HTX-212 is the only thing that they are closing out.. Since the release of
the 242 the 212 is not cost efficiant enough to maintain it.
all the rest will still be there.

nospamabctyping@mindspring.com (Casey Thrower)
shared these priceless pearls of wisdom:

Yeah, I had "trouble" with AES. My wife KB9MII got a transceiver for
Christmas from AES that was absent the battery pack by accident. It
happens. It also seems that her mother died the day after Christmas and
she went back to the funeral, but was so scared of driving on the Arkansas
Interstate in the snow and ice that she wanted that transceiver with her in
case she had road problems.

During her plane change in Las Vegas, Squeak from the LAS store drove 20
miles, met her at the plane, and personally gave her the battery pack, all
this on less than 4 hours notice.

Trouble? I'll deal with AES until the gates down below freeze shut.
Squeak, I've said it before and I'll say it again -- you are a gentleman, a
scholar, and a judge of fine (whiskey, horses, women -- pick ONE).

>of home, so what?

I don't see it that way. I think it's more like the govt telling you
who you can listen to on a street corner. If someone transmits
unscrambled transmissions on the PUBLIC air waves, that's the same
as speaking on a public street corner and we should have just as
much right to listen to it. The right to listen is connected to the
right to free speech. You can't have one without the other.

If they care so much about privacy, why can't they scramble?
It's like standing on a street corner and talking loudly to someone,
and then complaining because someone else walks by and hears it.

Of course that's just my opinion.
Anyone who doesn't agree with me is clearly wrong. :-)

Source record: 175231

Well, I tried again, and once again I get my email serviced back as "address invalid."

From the KW spec sheet, and I quote;"The power limitation of the dummy load is in the temperature rise at the "skin" of the resistor which must not exceed 300 celcius. This means that 1 kw can be applied for 5 seconds max. time. 100 watts raised the temperature to the limit in about 6 minutes......."

Again, "The ATU is suitable for transmitters with 1 kw PEP INPUT(emphsis mine) when the antenna feed impediance is 50 ohms with natural SWR better than 1.8:1. When feeding a high impediance, such as a voltage-fed long wire, the transmitter input power should be limited to 350 watts PEP." further,"The ceramic wafers of the heavy duty selector switch are operated well within their ratings WHEN THE OTHER LIMITATIONS ARE OBSERVED(emphasis mine). It is recommended that reduced power be used when adjusting the E-Z Match, until a good SWR is achieved."

In reply to>My Email address is fine and spec sheet says what I have the manual
>right here in front of me ... I nowhere say it is a Collins Tuner I
>claimed it was a Match to the Collins color scheme...

I didn't see "color scheme" in the headings, I saw COLLINS MATCH.

Ham equipment for sale.....

600W Peak, 400W continuous output, wideband, class A linear amplifier designed for 15-150 MHz. Average drive required for full output is only 15W. Single drawer unit includes Kilovac relay COR switching, adjustable time delay, and accessory switching. Amp utilizes a wideband splitter/combiner combo, auto bias switching, thermal protection, and uses MOSFET transistors. Amp delivers extremely clean signal and is overdesigned to provide 100% duty cycle at 400W output. Requires 28VDC @ 70A peaks for a power source. Asking $500 or best offer. I would also consider a trade for a solid state HF transceiver.

Pride 250W SSB / 100W AM/FM output HF (160-10M) solid state base amplifier with power supply, receive preamp, status LED's, etc. Uses 12W to drive. $150.

250W minimum output, all mode 80M-6M solid state base amplifier with built in power supply. 15W drives it to full output. It includes a variable drive attenuator. $250 O.B.O.

250W PEP / 100W continuous output 6M amplifier. Solid state base design with built in current limiting power supply. Includes meter, ALC/VSWR protection, receive preamp, and only requires 2W of drive for full output. Asking $150 O.B.O.

Gonset GSB-100 transmitter (80-10M). Works great, cosmetically fine. Has AM; PM; SSB; & CW modes. I will even throw in a second unit that's good for spare parts. Due to the weight of this item, I will not ship. $150 O.B.O.

If interested, please reply via E-mail at wizard@eskimo.com

Just wanted to take this opportunity to thank my 'ol buddy 'ol pal Casey Throwup for a most enjoyable weekend. Not a lot to do around here this weekend and you made the time go by most quickly. Would love to stick around and chat during the week, but I have a business to run and am much too busy earning a living. But if you're lucky (and if I'm really bored), I might just show up here next weekend to "entertain" you again. Have a good one. I'll be listening to your circus on 3894.5 from time to time. As is the case here on the newsgroup, your antics there are a good source of cheap entertainment. See ya. Bye.

Your friend Drew/Abner/CBRambo/Donnie/Azraelboy/PorkButt/BigAl/whoever you want me to be today.

This is the second time (two posts back-to-back) that you've said this.

* Not a year goes by without Congressional and state-level proclamations
being made commending amateurs for their work in disaster-related
communications.

* The President proclaims Amateur Radio Week every year.

* The media and public in tornado- and hurricane-prone areas are
certainly aware of our existence.

* City, county, and state officials are dependent upon RACES and ARES
groups for community service and disaster communications.

* The FCC might not be up to par in regards to enforcement, but they're
still manning their monitoring facilities (many by remote control now)
and can hear our every word.

* FCC officials still go to ham clubs and give speeches.

* The ARRL is in daily contact with the FCC regarding various issues.

Believe me, we're not forgotten.

Where do you get your negative ideas from, Greg?

There are laws that prohibit certain activities in one's
home, e.g., manufacturing drugs, explosives, and moonshine.
If our populace was educated, honest, and of high moral fiber,
such laws wouldn't be necessary.

Remember a few years back when everyone was talking about
under $500 HF transceivers to be sold at Radio Shack.

Well, they are coming. First SGS Corp, now ADI Premiere.
So let us get the fear machine in gear. Cheap gear = CBers.

What the manufacturers are looking at is incouraging Technician
Class Hams to upgrade. And there are a lot of them out there.
A thing to note is that much of the equipment has been aimed at
the high end contester, not the beginner. What made some of the
old (70s/80s) transceivers so popular was the market they targeted.

I am glad to see someone with marketing sense.

From Newsline (20 Mar 98):

The $500 HF Radio

Last week we told you about the under $600 high frequency
transceiver. Now comes word that another company may soon
an under $500 radio available to the ham radio community.
That company is ADI Premiere.

Take a look at amateur radio HF rigs today and you'll see
mostly high-end contest models. Prices in the thousands with
dozens of features and front panels full of knobs and switches.
Premier Communications, maker of ADI radios, believes that's
enough to keep some hams off the low bands. So, Premier is
thinking about going simple by offering an easy-to-use HF rig
at or below $500.

"We're basically targeting it toward the codeless licensees that
have come in during the last decade. We are approaching 10 years
now of the code-less license. Of course the number of upgrades are
very low, so we are targeting those guys. Trying to give those guys
a real obtainable thing from them to go after that upgrade." Ken Collier,
KO6UX.

Ken Collier, KO6UX, is Premier's assistant sales manager. He says the
company is getting a lot of response from its request for comments from
hams about what features they want in a low cost HF rig.

"Basically what we're looking for is what we can cut out of a radio without
severely impacting those, the sales of the radio." Collier

Of course, low cost means the radio would lack certain features like
advanced signal processing. But Collier says the new model would

include general coverage receive capability. The company knows the price would have to be right.

"We'd like to keep the cost under $500 retail. And that is actual selling price. That's not the suggested retail price. Suggested retail is going to be somewhat higher than that. Whether or not we can actually do that remains to be seen, but the engineering staff would be pretty optimistic." Collier

Collier says Premier may decide later this year on whether to bring the cost and complexity of HF communications down to perhaps the lowest ever.

While ADI may wind up being the first to break the $500 barrier, another company has already come close. As reported last week, the Bellevue, Washington based SGC Corporation has announced that it has developed a new twenty watt out high frequency transceiver that carries a manufacturers suggested retail price of only $595.

Jeff

I comes from 17 years in the military, 30 years in politics and
seeing every hobby I am in under attack. What makes us feel that
we will be spared anymore than gun owners are? We have more redneck
behavior on the ham bands than the whole gun community!

All it would take would be a reason to attack. Congress does not
think like it used to. Too media driven. A skilled lobbist could
have a field day with typical ham behavior.

My only concern is that we self police. If the FCC, in writing, allows us the freedom to do so, great!

BTW, amateur radio is the only hobby that I know of that works this closely with a regulatory agency. Gun owners don't, dog owners don't, pilots maybe.

- --- BEGIN Linux AX25 HOWTO part 3/3 ---

21.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network
| 154.27.3/24 | | . 44.136.16/24 \ | /
| | Linux | . \|/
| | | . |
| eth0 | IPIP | . /-----\ /----------\ |
---|---------------| |-----| TNC |----| Radio |---/
| 154.27.3.20 | Gateway | . \-----/ \----------/
| | | sl0
| | | 44.136.16.1
| | | .
| | | .
| \_________/ .
--- . . . . . .

The configuration files of interest are:

# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
```

```
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
kissattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"

echo "#"
echo "# the end"
```

21.3. AXIP encapsulated gateway configuration

Many Amateur Radio Internet gateways encapsulate AX.25, NetRom and Rose in addition to tcp/ip. Encapsulation of AX.25 frames within IP datagrams is described in RFC-1226 by Brian Kantor. Mike Westerhof wrote an implementation of an AX.25 encapsulation daemon for unix in 1991. The ax25-utils package includes a marginally enhanced version of it for Linux.

An AXIP encapsulation program accepts AX.25 frames at one end, looks at the destination AX.25 address to determine what IP address to send them to, encapsulates them in a tcp/ip datagram and then transmits them to the appropriate remote destination. It also accepts tcp/ip datagrams that contain AX.25 frames, unwraps them and processes them as if it had received them directly from an AX.25 port. To distinguish IP datagrams containing AX.25 frames from other IP datagrams which don't, AXIP datagrams are coded with a protocol id of 4 (or 94 which is now deprecated). This process is described in RFC-1226.

The ax25ipd program included in the ax25-utils package presents itself as a program supporting a KISS interface across which you pass AX.25 frames, and an interface into the tcp/ip protocols. It is configured with a single configuration file called /etc/ax25/ax25ipd.conf.

21.3.1. AXIP configuration options.

The ax25ipd program has two major modes of operation. "digipeater" mode and "tnc" mode. In "tnc" mode the daemon is treated as though it were a kiss TNC, you pass KISS encapsulated frames to it and it will transmit them, this is the usual configuration. In "digipeater" mode, you treat the daemon as though it were an AX.25 digipeater. There are subtle differences between these modes.

In the configuration file you configure "routes" or mappings between destination AX.25 callsigns and the IP addresses of the hosts that you want to send the AX.25 packets too. Each route has options which will be explained later.
Other options that are configured here are

the tty that the ax25ipd daemon will open and its speed (usually one end of a pipe)

what callsign you want to use in "digipeater" mode

beacon interval and text

whether you want to encapsulate the AX.25 frames in IP datagrams or in UDP/IP datagrams. Nearly all AXIP gateways use IP encapsulation, but some gateways are behind firewalls that will not allow IP with the

AXIP protocol id to pass and are forced to use UDP/IP. Whatever you choose must match what the tcp/ip host at the other end of the link is using.

21.3.2. A typical /etc/ax25/ax25ipd.conf file.

```
#
# ax25ipd configuration file for station floyd.vk5xxx.ampr.org
#
# Select axip transport. 'ip' is what you want for compatibility
# with most other gateways.
#
socket ip
#
# Set ax25ipd mode of operation. (digi or tnc)
#
mode tnc
#
# If you selected digi, you must define a callsign. If you selected
# tnc mode, the callsign is currently optional, but this may change
# in the future! (2 calls if using dual port kiss)
#
#mycall vk5xxx-4
#mycall2 vk5xxx-5
#
# In digi mode, you may use an alias. (2 for dual port)
#
#myalias svwdns
#myalias2 svwdn2
#
# Send an ident every 540 seconds ...
#
#beacon after 540
#btext ax25ip -- tncmode rob/vk5xxx -- Experimental AXIP gateway
#
# Serial port, or pipe connected to a kissattach in my case
#
device /dev/ttyq0
#
# Set the device speed
#
speed 9600
#
# loglevel 0 - no output
# loglevel 1 - config info only
# loglevel 2 - major events and errors
# loglevel 3 - major events, errors, and AX25 frame trace
# loglevel 4 - all events
# log 0 for the moment, syslog not working yet ...
#
loglevel 2
```

```
#
# If we are in digi mode, we might have a real tnc here, so use param to
# set the tnc parameters ...
#
#param 1 20
#
# Broadcast Address definition. Any of the addresses listed will be forwarded
# to any of the routes flagged as broadcast capable routes.
#
broadcast QST-0 NODES-0
#
# ax.25 route definition, define as many as you need.
# format is route (call/wildcard) (ip host at destination)
# ssid of 0 routes all ssid's
#
# route <destcall> <destaddr> [flags]
#
# Valid flags are:
# b - allow broadcasts to be transmitted via this route
# d - this route is the default route
#
route vk2sut-0 44.136.8.68 b
route vk5xxx 44.136.188.221 b
route vk2abc 44.1.1.1
#
#
```

21.3.3. Running ax25ipd

Create your /etc/ax25/axports entry:

```
# /etc/ax25/axports
#
axip VK2KTJ-13 9600 256 AXIP port
#
```

Run the kissattach command to create that port:

```
/usr/sbin/kissattach /dev/ptyq0 axip
```

Run the ax25ipd program:

```
/usr/sbin/ax25ipd &
```

Test the AXIP link:

```
call axip vk5xxx
```

21.3.4. Some notes about the routes and route flags

The "route" command is where you specify where you want your AX.25 packets encapsulated and sent to. When the ax25ipd daemon receives a packet from its interface, it compares the destination callsign with each of the callsigns in its routing table. If if finds a match then

the ax.25 packet is encapsulated in an IP datagram and then transmitted to the host at the specified IP address.

There are two flags you can add to any of the route commands in the ax25ipd.conf file. The two flags are:

b traffic with a destination address matching any of those on the list defined by the "broadcast" keyword should be transmitted via this route.

d any packets not matching any route should be transmitted via this route.

The broadcast flag is very useful, as it enables informations that is normally destined for all stations to a number of AXIP destinations. Normally axip routes are point-to-point and unable to handle 'broadcast' packets.

21.4. Linking NOS and Linux using a pipe device

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users via NOS.

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyq[1-f] and the slave end of the pipes are known as: ttyq[1-f]. Remember they come in pairs, so if you select /dev/ptyqf as your master end then you must use /dev/ttyqf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program,

as the Linux kernel starts first and the master end of the pipe must
be opened first. You must also remember that your Linux kernel must
have a different IP address to your NOS, so you will need to allocate
a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to
create the slip link from your linux kernel you can use commands
similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptyqf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88
and the NOS program is using IP address 44.70.248.67. The route
command in the last line simply tells your linux kernel to route all
datagrams for the amprnet via the slip link created by the slattach
command. Normally you would put these commands into your
/etc/rc.d/rc.inet2 file after all your other network configuration is
complete so that the slip link is created automatically when you
reboot. Note: there is no advantage in using cslip instead of slip as
it actually reduces performance because the link is only a virtual one
and occurs fast enough that having to compress the headers first takes
longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttyqf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end
of the pipe device pair to your linux kernel, and a route to it to
make it work. When you have started NOS you should be able to ping and
telnet to your NOS from your Linux machine and vice versa. If not,
double check that you have made no mistakes especially that you have
the addresses configured properly and have the pipe devices around the
right way.

22. Where do I find more information about .... ?

Since this document assumes you already have some experience with
packet radio and that this might not be the case I've collected a set
of references to other information that you might find useful.

22.1. Packet Radio

You can get general information about Packet Radio from these sites:

American Radio Relay League <http://www.arrl.org/>,

Radio Amateur Teleprinter Society <http://www.rats.org/>

Tucson Amateur Packet Radio Group <http://www.tapr.org/>

22.2. Protocol Documentation

AX.25, NetRom - Jonathon Naylor has collated a variety of documents that relate to the packet radio protocols themselves. This documentation has been packaged up into ax25-doc-1.0.tar.gz <ftp://ftp.pspt.fi/pub/ham/linux/ax25/ax25-doc-1.0.tar.gz>

22.3. Hardware Documentation

Information on the PI2 Card is provided by the Ottawa Packet Radio Group <http://hydra.carleton.ca/>.

Information on Baycom hardware is available at the Baycom Web Page <http://www.baycom.de/>.

23. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which TCP/IP is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

- --- BEGIN Linux AX25 HOWTO part 1/3 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v1.5, 17 October 1997

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25, NetRom and
Rose support for Linux. A few typical configurations are described
that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very
flexible. To people relatively unfamiliar with the Linux operating
system the configuration process may look daunting and complicated. It
will take you a little time to come to understand how the whole thing
fits together. You will find configuration very difficult if you have
not properly prepared yourself by learning about Linux in general. You
cannot expect to switch from some other environment to Linux without
learning about Linux itself.

1.1. Changes from the previous version

Additions:
Joerg Reuters Web Page
"More Information" section
ax25ipd configuration.

Corrections/Updates:
Changed pty's to a safer range to prevent possible conflicts
```

Updated module and ax25-utils versions.

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.

1.2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. This document is also available in various formats from the sunsite.unc.edu ftp archive <ftp://sunsite.unc.edu/pub/Linux/docs/howto/>.

You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

1.3. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the NET-3-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-3-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>

More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol

features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@poboxes.com. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

2.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

Simplified Protocol Layering Diagram

```
-----------------------------------------------
| AF_AX25 | AF_NETROM | AF_INET | AF_ROSE |
|=========|===========|=============|=========|
| | | | |
| | | TCP/IP | |
```

```
| | ---------- | |
| | NetRom | | Rose |
| ------------------------------------
| AX.25 |
-----------------------------------------
```

This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram of Linux Network Implementation

```
-------------------------------------------------------------------------
User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
-------------------------------------------------------------------------
| Sockets | open(), close(), listen(), read(), write(), connect()
| |-----------------------------------------------
| | AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
|---------------------------------------------------------------
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
|---------------------------------------------------------------
| Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
|---------------------------------------------------------------
| Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
-------------------------------------------------------------------------
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card
-------------------------------------------------------------------------
```

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker- nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam- ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker- nel includes the desired protocol that presents a programming inter- face that the call program can use. I have attempted to lay out this document in roughly that order.

3. The AX.25/NetRom/Rose software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

3.1. Finding the kernel, tools and utility packages.

3.1.1. The kernel source:

The kernel source can be found in its usual place at: ftp.kernel.org

/pub/linux/kernel/v2.0/linux-2.0.31.tar.gz

The current version of the AX25 upgrade patch is available at: ftp.pspt.fi

/pub/linux/ham/ax25/ax25-module-14e.tar.gz

3.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at: ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.33.tar.gz

The latest ipfwadm package can be found at: ftp.xos.nl

/pub/linux/ipfwadm/

3.1.3. The AX25 utilities:

There are two different families of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.*+moduleXX kernels. The ax25-utils version number indicates the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel. The following are working combinations. You must use one of the following combinations, any other combination will not work, or will not work well.

```
Linux Kernel AX25 Utility set
---------------------- -------------------------
linux-2.0.29 ax25-utils-2.0.12c.tar.gz **
linux-2.0.28+module12 ax25-utils-2.1.22b.tar.gz **
linux-2.0.30+module14c ax25-utils-2.1.42a.tar.gz
linux-2.0.31+module14d ax25-utils-2.1.42a.tar.gz
linux-2.1.22 ++ ax25-utils-2.1.22b.tar.gz
linux-2.1.42 ++ ax25-utils-2.1.42a.tar.gz
```

Note: the ax25-utils-2.0.* series (marked above with the '**' symbol) is now obsolete and is no longer supported. This document covers configuration using the versions of software recommended above the table. While there are differences between the releases, most of the information will be relevant to earlier releases of code.

The AX.25 utility programs can be found at: ftp.pspt.fi <ftp://ftp.pspt.fi/pub/linux/ham/ax25/>

or at: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

4. Installing the AX.25/NetRom/Rose software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

4.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.31.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-14e.tar.gz
# patch -p0 </usr/src/ax25-module-14/ax25-2.0.31-2.1.47-2.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make menuconfig
```

You might also try:

```
# make config
```

I'm going to describe the full screen method (menuconfig) because it is easier to move around, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

```
The options most relevant to an AX.25 configuration are:

Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...

The options I have flagged with a `*' are those that you must must
answer `Y' to. The rest are dependent on what hardware you have and
what other options you want to include. Some of these options are
described in more detail later on, so if you don't know what you want
yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able
to cleanly compile your new kernel:

# make dep
# make clean
```

```
# make zImage
```

maake sure you move your arch/i386/boot/zImage file wherever you want it and then edit your /etc/lilo.conf file and rerun lilo to ensure that you actually boot from it.

4.1.1. A word about Kernel modules

I recommend that you don't compile any of the drivers as modules. In nearly all installations you gain nothing but additional complexity. Many people have problems trying to get the modularised components working, not because the software is faulty but because modules are more complicated to install and configure.

If you've chosen to compile any of the components as modules, then you'll also need to use:

```
# make modules
# make modules_install
```

to install your modules in the appropriate location.

You will also need to add some entries into your /etc/conf.modules file that will ensure that the kerneld program knows how to handle the kernel modules. You should add/modify the following:

```
alias net-pf-3 ax25
alias net-pf-6 netrom
alias net-pf-11 rose
alias tty-ldisc-1 slip
alias tty-ldisc-3 ppp
alias tty-ldisc-5 mkiss
alias bc0 baycom
alias nr0 netrom
alias pi0a pi2
alias pt0a pt
alias scc0 optoscc (or one of the other scc drivers)
alias sm0 soundmodem
alias tunl0 newtunnel
alias char-major-4 serial
alias char-major-5 serial
alias char-major-6 lp
```

4.1.2. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler. That being said, it also makes configuration slightly more difficult.

All drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin
etc now present a normal network interface, that is they now
look like the ethernet driver does, they no longer look like
KISS TNC's. A new utility called net2kiss allows you to build a
kiss interface to these devices if you wish.
bug fixed
there have been many bug fixes and new features added to the
drivers and protocols. The Rose protocol is one important
addition.

4.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new
network configuration tools. These tools allow you to modify the
configuration of network devices and to add routes to the routing
table.

The new alpha release of the standard net-tools package includes
support for AX.25 and NetRom support. I've tested this and it seems to
work well for me.

4.2.1. A patch kit that adds Rose support and fixes some bugs.

The standard net-tools-1.33.tar.gz package has some small bugs that
affect the AX.25 and NetRom support. I've made a small patch kit that
corrects these and adds Rose support to the tools as well.

You can get the patch from: zone.pspt.fi
<ftp://zone.pspt.fi/pub/linux/ham/ax25/net-
tools-1.33.rose.tjd.diff.gz>.

4.2.2. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.33.tar.gz
# zcat net-tools-1.33.rose.tjd.diff.gz | patch -p0
# cd net-tools-1.33
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

When the compilation is complete, you should use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

4.3. The AX.25 user and utility programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.42a.tar.gz
# cd ax25-utils-2.1.42a
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If this is a first time installation, that is you've never installed
any ax25 utilities on your machine before you should also use the:

```
# make installconf
```

command to install some sample configuration files into the /etc/ax25/
directory from which to work.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package
properly installed on your system. The configuration script attempts
to locate your ncurses packages in the common locations, but some
installations have ncurses badly installed and it is unable to locate
them.
5. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid
allocated to it. These are configured in the configuration files that

will be described in detail later on.

Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

5.1. What are all those T1, T2, N2 and things ?

Not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.
T3	CHECK	The period of time we wait between sending

| | a check that the link is still active.

N2 | RETRY | How many times to retransmit a frame before
| | assuming the connection has failed.

Idle | | The period of time a connection can be idle
| | before we close it down.

Window | MAXFRAME | The maximum number of unacknowledged
| | transmitted frames.

5.2. Run time configurable parameters

The 2.1.* and 2.0.* +moduleXX kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port.

The structure of the files in /proc/sys/net/ax25/<portname>/ is as follows:

FileName Meaning Values Default
ip_default_mode IP Default Mode 0=DG 1=VC 0
ax25_default_mode AX.25 Default Mode 0=Normal 1=Extended 0
backoff_type Backoff 0=Linear 1=Exponential 1
connect_mode Connected Mode 0=No 1=Yes 1
standard_window_size Standard Window 1 <= N <= 7 2
extended_window_size Extended Window 1 <= N <= 63 32
t1_timeout T1 Timeout 1s <= N <= 30s 10s
t2_timeout T2 Timeout 1s <= N <= 20s 3s
t3_timeout T3 Timeout 0s <= N <= 3600s 300s
idle_timeout Idle Timeout 0m <= N 20m
maximum_retry_count N2 1 <= N <= 31 10
maximum_packet_length AX.25 Frame Length 1 <= N <= 512 256

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

The structure of the files in /proc/sys/net/netrom/ is as follows:

FileName Values Default
default_path_quality 10
link_fails_count 2
network_ttl_initialiser 16

```
obsolescence_count_initialiser 6
routing_control 1
transport_acknowledge_delay 50
transport_busy_delay 1800
transport_maximum_tries 3
transport_requested_window_size 4
transport_timeout 1200
```

The structure of the files in /proc/sys/net/rose/ is as follows:

```
FileName Values Default
acknowledge_hold_back_timeout 50
call_request_timeout 2000
clear_request_timeout 1800
link_fail_timeout 1200
maximum_virtual_circuits 50
reset_request_timeout 1800
restart_request_timeout 1800
routing_control 1
window_size 3
```

To set a parameter all you need to do is write the desired value to the file itself, for example to check and set the Rose window size you'd use something like:

```
# cat /proc/sys/net/rose/window_size
3
# echo 4 >/proc/sys/net/rose/window_size
# cat /proc/sys/net/rose/window_size
4
```

6. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to obtain the parameters for the various AX.25 ports configured on your Linux machine. For AX.25 ports the file that is read is the /etc/ax25/axport file. You must have an entry in this file for each AX.25 port you want on your system.

6.1. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig' command. This is the object that the Linux kernel sends and receives network data from. Nearly always the network device has a physical port associated with it, but there are occasions where this isn't necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most common is probably the KISS driver, but others are the SCC driver(s), the Baycom driver and the SoundModem driver.
Each of these device drivers will create a network device when it is started.

6.1.1. Creating a KISS device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Serial port KISS driver for AX.25
```

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

6.1.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyq*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyq*' and the slave ends are called `/dev/ttyq*'. There is a one to one relationship between masters and slaves, so /dev/ptyq0 is the master end of a pipe with /dev/ttyq0 as its slave. You must open the master end of a pipe

before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyq0 /dev/ptyq1
# /usr/sbin/kissattach /dev/ttyq0 port1
# /usr/sbin/kissattach /dev/ttyq1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyq0 and /dev/ttyq1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

6.1.2. Creating a Baycom device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BAYCOM ser12 and par96 driver for AX.25
```

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The BayCom driver creates network devices called: bc0, bc1, bc2 etc. when it is configured.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod hdlcdrv
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod hdlcdrv
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the Baycom module using:

```
# insmod hdlcdrv
# insmod baycom
```

or that you compiled the kernel with the driver inbuilt.

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

6.1.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 200 slot 100 ppersist 40 half
```

Note that the timing values are in milliseconds.

6.1.3.1. Configuring the Kernel AX.25 to use the BayCom device

The BayCom driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig bc0 hw ax25 VK2KTJ-15 up
```

will assign the BayCom device bc0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, you'll still need to use the ifconfig command to bring the device up though:

```
# ifconfig bc0 up
# axparms -setcall bc0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the BayCom device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.4. Creating a SoundModem device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
```

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

6.1.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:
setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

6.1.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod hdlcdrv
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod hdlcdrv
# insmod soundmodem
```

or that you compiled the kernel with the driver inbuilt.

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
```

6.1.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 100 slot 50 ppersist 128 full
```

Note that the timing values are in milliseconds.

6.1.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

6.1.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, but you still need the ifconfig utility to bring the device up:

```
# ifconfig sm0 up
# axparms -setcall sm0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.5. Creating a PI card device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Ottawa PI and PI/2 support for AX.25
```

The PI card device driver creates devices named `pi[0-9][ab]'. The first PI card detected will be allocated `pi0', the second `pi1' etc. The `a' and `b' refer to the first and second physical interface on the PI card. If you have built your kernel to include the PI card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PI card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

6.1.6. Creating a PacketTwin device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Gracilis PackeTwin support for AX.25
```

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

6.1.7. Creating a generic SCC device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Z8530 SCC KISS emulation driver for AX.25
```

Joerg Reuter, DL1BKE, jreuter@poboxes.com has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

6.1.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

Joerg's web page <http://www.rat.de/jr/>

or:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following commands were what I used to compile and install the package for kernel version 2.0.30:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0-scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

6.1.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

6.1.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may

specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card
PRIMUS
the PRIMUS-PC (DG9BL) card

```
BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
```

```
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

6.1.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and
specifies the name of the special device file that the rest of
the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

6.1.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

- --- BEGIN Linux AX25 HOWTO part 2/3 ---

attach asy scc0 0 ax25 scc0 256 256 4800

6.1.7.5. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program
to display the current configuration of an SCC device. To use it try:

# sccstat /dev/scc0

you will displayed a very large amount of information relating to the
configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration
after you have booted. Its syntax is very similar to the NOS param
command, so to set the txtail setting of a device to 100mS you would
use:

# sccparam /dev/scc0 txtail 0x8

6.1.8. Creating a BPQ ethernet device.

Kernel Compile Options:

General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BPQ Ethernet driver for AX.25

Linux supports BPQ Ethernet compatibility. This enables you to run the
AX.25 protocol over your Ethernet LAN and to interwork your linux
machine with other BPQ machines on the LAN.

The BPQ network devices are named `bpq[0-9]'. The `bpq0' device is
associated with the `eth0' device, the `bpq1' device with the `eth1'
```

device etc.

Configuration is quite straightforward. You firstly must have
configured a standard Ethernet device. This means you will have
compiled your kernel to support your Ethernet card and tested that
this works. Refer to the Ethernet-HOWTO <Ethernet-HOWTO.html> for more
information on how to do this.

To configure the BPQ support you need to configure the Ethernet device
with an AX.25 callsign. The following command will do this for you:

/sbin/ifconfig bpq0 hw ax25 vk2ktj-14 up

Again, remember that the callsign you specify should match the entry
in the /etc/ax25/axports file that you wish to use for this port.

6.1.9. Configuring the BPQ Node to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux
implementation does not, and instead it uses the normal Ethernet
broadcast address. The NET.CFG file for the BPQ ODI driver should
therefore be modifified to look similar to this:

LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address

6.2. Creating the /etc/ax25/axports file.

The /etc/ax25/axports is a simple text file that you create with a
text editor. The format of the /etc/ax25/axports file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-15 4800 256 2 4800bps 144.800 MHz
ether VK2KTJ-14 10000000 256 2 BPQ/ethernet device

Remember, you must assign unique callsign/ssid to each AX.25 port you
create. Create one entry for each AX.25 device you want to use, this
includes KISS, Baycom, SCC, PI, PT and SoundModem ports. Each entry
here will describe exactly one AX.25 network device. The entries in
this file are associated with the network devices by the
callsign/ssid. This is at least one good reason for requiring unique
callsign/ssid.

6.3. Configuring AX.25 routing.

You may wish to configure default digipeaters paths for specific
hosts. This is useful for both normal AX.25 connections and also IP
based connections. The axparms command enables you to do this. Again,
the man page offers a complete description, but a simple example might
be:

/usr/sbin/axparms -route add radio VK2XLZ VK2SUT

This command would set a digipeater entry for VK2XLZ via VK2SUT on the
AX.25 port named radio.

7. Configuring an AX.25 interface for TCP/IP.

It is very simple to configure an AX.25 port to carry TCP/IP. If you
have KISS interfaces then there are two methods for configuring an IP
address. The kissattach command has an option that allows you to do
specify an IP address. The more conventional method using the ifconfig
command will work on all interface types.

So, modifying the previous KISS example:

/usr/sbin/kissattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 ax0
/sbin/route add default ax0

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

If you have any other interface type then you use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other TCP/IP interface. The following example is for a PI card device, but would work equally well for any other AX.25 network device:

```
# /sbin/ifconfig pi0a 44.136.8.5 netmask 255.255.255.0 up
# /sbin/ifconfig pi0a broadcast 44.136.8.255 mtu 512
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other TCP/IP software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring a NetRom port.

The NetRom protocol relies on, and uses the AX.25 ports you have created. The NetRom protocol rides on top of the AX.25 protocol. To configure NetRom on an AX.25 interface you must configure two files. One file describes the Netrom interfaces, and the other file describes which of the AX.25 ports will carry NetRom. You can configure multiple NetRom ports, each with its own callsign and alias, the same procedure applies for each.

8.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom ports in much the same way as the /etc/ax25/axports file describes the AX.25 ports. Each NetRom device you wish to create must have an entry in the /etc/ax25/nrports file. Normally a Linux machine would have only one NetRom device configured that would use a number of the AX.25 ports defined. In some situations you might wish a special service such as a BBS to have a seperate NetRom alias and so you would create more than one.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use. Note, this is not that address that users should connect to to get access to a node style interface. (The node program is covered later). This callsign/ssid should be unique and should not appear elsewhere in either of the /etc/ax25/axports or the /etc/ax25/nrports files.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 236 Linux Switch Port

This example creates a NetRom port known to the rest of the NetRom network as `LINUX:VK2KTJ-9'.

This file is used by programs such as the call program.

8.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file. This file may contain a number of entries. There would normally be one entry for each AX.25 port that you wish to allow NetRom traffic on.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If you do not have an entry in /etc/ax25/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 100 1

8.3. Creating the NetRom Network device

When you have the two configuration files completed you must create the NetRom device in much the same way as you did for the AX.25 devices. This time you use the nrattach command. The nrattach works in just the same way as the axattach command except that it creates NetRom network devices called `nr[0-9]'. Again, the first time you use the nrattach command it creates the `nr0' device, the second time it creates the `nr1' network devices etc. To create the network device for the NetRom port we've defined we would use:

nrattach netrom

This command would start the NetRom device (nr0) named netrom configured with the details specified in the /etc/ax25/nrports file.

8.4. Starting the NetRom daemon

The Linux kernel does all of the NetRom protocol and switching, but does not manage some functions. The NetRom daemon manages the NetRom routing tables and generates the NetRom routing broadcasts. You start NetRom daemon with the command:

/usr/sbin/netromd -i

You should soon see the /proc/net/nr_neigh file filling up with information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that it is started automatically each time you reboot.

8.5. Configuring NetRom routing.

You may wish to configure static NetRom routes for specific hosts. The nrparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/nrparms -nodes VK2XLZ-10 + #MINTO 120 5 radio VK2SUT-9

This command would set a NetRom route to #MINTO:VK2XLZ-10 via a neighbour VK2SUT-9 on my AX.25 port called `radio'.

You can manually create entries for new neighbours using the nrparms command as well. For example:

/usr/sbin/nrparms -routes radio VK2SUT-9 + 120

This command would create VK2SUT-9 as a NetRom neighbour with a quality of 120 and this will be locked and will not be deleted automatically.

9. Configuring a NetRom interface for TCP/IP.

Configuring a NetRom interface for TCP/IP is almost identical to configuring an AX.25 interface for TCP/IP.

Again you can either specify the ip address and mtu on the nrattach command line, or use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu of 512 and configured with the details from the /etc/ax25/nrports file for a NetRom port named netrom you would use:

```
# /usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# /usr/sbin/nrattach netrom
# ifconfig nr0 44.136.8.5 netmask 255.255.255.0 hw netrom VK2KTJ-9
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring a Rose port.

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

The Rose packet layer protocol protocol relies on, and uses the AX.25 ports you have created. The Rose protocol rides on top of the AX.25 protocol. To configure Rose you must create a configuration file that describes the Rose ports you want. You can create multiple Rose ports if you wish, the same procedure applies for each.

10.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the
/etc/ax25/rsports file. This file describes the Rose port in much the
same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

rose 5050294760 Rose Port

Note that Rose will use the default callsign/ssid configured on each
AX.25 port unless you specify otherwise.

To configure a seperate callsign/ssid for Rose to use on each port you
use the rsparms command as follows:

/usr/sbin/rsprams -call VK2KTJ-10

This example would make Linux listen for and use the callsign/ssid
VK2KTJ-10 on all of the configured AX.25 ports for Rose calls.

10.2. Creating the Rose Network device.

When you have created the /etc/ax25/rsports file you may create the
Rose device in much the same way as you did for the AX.25 devices.
This time you use the rsattach command. The rsattach command creates
network devices named `rose[0-5]'. The first time you use the rsattach
command it create the `rose0' device, the second time it creates the
`rose1' device etc. For example:

rsattach rose

This command would start the Rose device (rose0) configured with the
details specified in the /etc/ax25/rsports file for the entry named
`rose'.

10.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms
utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named `radio' in your /etc/ax25/axports file to a neighbour with the call-sign VK2XLZ.

You may specify a route with a mask to capture a number of Rose destinations into a single routing entry. The syntax looks like:

```
# rsparms -nodes add 5050295502/4 radio vk2xlz
```

which would be identical to the previous example except that it would match any destination address that matched the first four digits supplied, in this case any address commencing with the digits 5050. An alternate form for this command is:

```
# rsparms -nodes add 5050/4 radio vk2xlz
```

which is probably the less ambiguous form.

11. Making AX.25/NetRom/Rose calls.

Now that you have all of your AX.25, NetRom and Rose interfaces configured and active, you should be able to make test calls.

The AX25 Utilities package includes a program called `call' which is a splitscreen terminal program for AX.25, NetRom and Rose.

A simple AX.25 call would look like:

```
/usr/bin/call radio VK2DAY via VK2SUT
```

A simple NetRom call to a node with an alias of SUNBBS would look like:

```
/usr/bin/call netrom SUNBBS
```

A simple Rose call to HEARD at node 5050882960 would look like:

```
/usr/bin/call rose HEARD 5050882960
```

Note: you must tell call which port you wish to make the call on, as the same destination node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

12. Configuring Linux to accept Packet connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25, NetRom or Rose connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they

connect?". People are developing neat little applications that may be used to provide services to callers, a simple example is the pms program included in the AX25 utilities, a more complex example is the node program also included in the AX25 utilities. Alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

The ax25d program is similar to the inetd program commonly used to accept incoming TCP/IP connections on unix machines. It sits and listens for incoming connections, when it detects one it goes away and checks a configuration file to determine what program to run and connect to that connection. Since this the standard tool for accepting incoming AX.25, NetRom and Rose connections I'll describe how to configure it.

12.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25, NetRom and Rose connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The general format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[port_name] || <port_name> || {port_name}
<peer1> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
parameters window T1 T2 T3 idle N2 <mode>
<peer3> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
...
default window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<port_name>
is the name of the AX.25, NetRom or Rose port as specified in the /etc/ax25/axports, /etc/ax25/nrports and /etc/ax25/rsports files. The name of the port is surrounded by the `[]' brackets if it is an AX.25 port, the `<>' brackets if it is a NetRom port, or the `{}' brackets if it is a Rose port. There is an alternate form for this field, and that is use prefix the port name with `callsign/ssid via' to indicate that you wish accept calls to the callsign/ssid via this interface. The example

should more clearly illustrate this.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

idle
is the idle timer value in seconds.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Validate call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%d Name of the port the connection was received on.

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

%P AX.25 callsign of the remote node that the connection came in
from without the SSID, in uppercase.

%p AX.25 callsign of the remote node that the connection came in
from without the SSID, in lowercase.

%R AX.25 callsign of the remote node that the connection came in
from with the SSID, in uppercase.

%r AX.25 callsign of the remote node that the connection came in
from with the SSID, in lowercase.

You need one section in the above format for each AX.25, NetRom or
Rose interface you want to accept incoming AX.25, NetRom or Rose
connections on.

There are two special lines in the paragraph, one starts with the
string `parameters' and the other starts with the string `default'
(yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not

matching any specific rule will be disconnected immediately without notice.

The `parameters' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `parameters' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any using the `parameters' entry. The trap is that the these defaults apply only to those rules below the `parameters' line, not to those above. You may have more than one `parameters' rule per interface definition, and in this way you may create groups of default configurations. It is important to note that the `parameters' rule does not allow you to set the `uid' or `command' fields.

12.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 02/03/97
# This configuration uses the AX.25 port defined earlier.

# <peer> Win T1 T2 T3 idl N2 <mode> <uid> <exec> <argv[0]>[<args....>]

[VK2KTJ-0 via radio]
parameters 1 10 * * * * *
VK2XLZ * * * * * * * root /usr/sbin/axspawn axspawn %u +
VK2DAY * * * * * * * root /usr/sbin/axspawn axspawn %u +
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

[VK2KTJ-1 via radio]
default * * * * * 0 root /usr/sbin/node node

<netrom>
parameters 1 10 * * * * *
NOCALL * * * * * * L
default * * * * * * 0 root /usr/sbin/node node

{VK2KTJ-0 via rose}
parameters 1 10 * * * * *
VK2XLZ * * * * * * * root /usr/sbin/axspawn axspawn %u +
VK2DAY * * * * * * * root /usr/sbin/axspawn axspawn %u +
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

{VK2KTJ-1 via rose}
default * * * * * 0 root /usr/sbin/node node radio
```

This example says that anybody attempting to connect to the callsign `VK2KTJ-0' heard on the AX.25 port called `radio' will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should be locked out, note the use of mode `L'.

The parameters line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/sbin/axspawn program for them. Any copies of /usr/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines provide definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection, and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

The next configuration accepts calls to VK2KTJ-1 via the radio port. It runs the node program for everybody that connects to it.

The next configuration is a NetRom configuration, note the use of the greater-then and less-than braces instead of the square brackets. These denote a NetRom configuration. This configuration is simpler, it simply says that anyone connecting to our NetRom port called `netrom' will have the node program run for them, unless they have a callsign of `NOCALL' in which case they will be locked out.

The last two configurations are for incoming Rose connections. The first for people who have placed calls to `vk2ktj-0' and the second for `VK2KTJ-1 at the our Rose node address. These work precisely the same way. Not the use of the curly braces to distinguish the port as a Rose port.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. The configuration file is explained fully in the ax25d.conf man page. A more detailed example is included in the ax25-utils package that might be useful to you too.

12.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

13. Configuring the node software.

The node software was developed by Tomi Manninen <tomi.manninen@hut.fi> and was based on the original PMS program. It provides a fairly complete and flexible node capability that is easily

configured. It allows users once they are connected to make Telnet, NetRom, Rose, and AX.25 connections out and to obtain various sorts of information such as Finger, Nodes and Heard lists etc. You can configure the node to execute any Linux command you wish fairly simply.

The node would normally be invoked from the ax25d program although it is also capable of being invoked from the TCP/IP inetd program to allow users to telnet to your machine and obtain access to it, or by running it from the command line.

13.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports rose netrom

# Node Identification.
# this will appear in the node prompt
NodeId LINUX:VK2KTJ-9

# NetRom port
# This is the name of the netrom port that will be used for
# outgoing NetRom connections from the node.
NrPort netrom

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800
```

```
# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex node commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"

# Externam Command Aliases
# Provide a means of executing external commands under the node.
# extcmd <cmdname> <flag> <userid> <command>
# Flag == 1 is the only implemented function.
# <command> is formatted as per ax25d.conf
extcmd PMS 1 root /usr/sbin/pms pms -u %U -o VK2KTJ

# Logging
# Set logging to the system log. 3 is the noisiest, 0 is disabled.
loglevel 3

# The escape character
# 20 = (Control-T)
EscapeChar 20
```

13.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ ------------------------------------------------------------
ampr User is telnet connected from an amprnet address (44.0.0.0)
ax25 User connected by AX.25
host User started node from command line
```

inet user is telnet connected from a non-loca, non-ampr address.
local User is telnet connected from a 'local' host
netrom User connected by NetRom
rose User connected by Rose
* User connected by any means.

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users to enter a password when they connect. This might be useful to help protect specially configured users who have high authority levels. If the fourth field is set then its value will be the password that will be accepted.

permissions
The permissions field is the final field in each entry in the file. The permissions field is coded as a bit field, with each facility having a bit value which if set allows the option to be used and if not set prevents the facility being used. The list of controllable facilities and their corresponding bit values are:

value description
----- --
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
128 Rose (C)onnects allowed.

To code the permissions value for a rule, simply take each of the permissions you want that user to have and add their values together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 255

# The following users are banned from connecting
NOCALL * * * 0
```

```
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 159
* netrom * * 159
* local * * 159
* host * * 159
* ampr * * 159
```

13.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[vk2ktj-1 via radio]
default * * * * * 0 root /usr/sbin/node node
```

This says that the Linux kernel code will answer any connection requests for the callsign `VK2KTJ-1' heard on the AX.25 port named `radio', and will cause the node program to be run.

13.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 3694/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 3694 of your machine will be prompted to login and if configured, their password and then they will be con

nected to the node.

14. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It may be invoked from the ax25d program as described above in a manner similar to the node program. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

14.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
```

```
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.

create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.
```

15. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

15.1. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

15.2. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

15.3. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

15.4. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

15.5. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/sbin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

16. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
default * * * * * * *
root /usr/sbin/ax25_call ax25_call bpq %u vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu&#65533;
ally be the Linux ax25d daemon and then be automatically switched to
an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. The `netrom_call' and `rose_call' utilities work in similar ways. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

17. Configuring the Rose Uplink and Downlink commands

If you are familiar with the ROM based Rose implementation you will be familiar with the method by which AX.25 users make calls across a Rose network. If a users local Rose node has the callsign VK2KTJ-5 and the AX.25 user wants to connect to VK5XXX at remote Rose node 5050882960 then they would issue the command:

```
c vk5xxx v vk2ktj-5 5050 882960
```

At the remote node, VK5XXX would see an incoming connection with the local AX.25 users callsign and being digipeated via the remote Rose

nodes callsign.

The Linux Rose implementation does not support this capability in the kernel, but there are two application programs called rsuplnk and rsdwnlnk which perform this function.

17.1. Configuring a Rose downlink

To configure your Linux machine to accept a Rose connection and establish an AX.25 connection to any destination callsign that is not being listened for on your machine you need to add an entry to your /etc/ax25/ax25d.conf file. Normally you would configure this entry to be the default behaviour for incoming Rose connections. For example you might have Rose listeners operating for destinations like NODE-0 or HEARD-0 that you wish to handle locally, but for all other destination calls you may want to pass them to the rsdwnlink command and assume they are AX.25 users.

A typical configuration would look like:

```
#
{* via rose}
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsdwnlnk rsdwnlnk 4800 vk2ktj-5
#
```

With this configuration any user who established a Rose connection to your Linux nodes address with a destination call of something that you were not specifically listening for would be converted into an AX.25 connection on the AX.25 port named 4800 with a digipeater path of VK2KTJ-5.

17.2. Configuring a Rose uplink

To configure your Linux machine to accept AX.25 connections in the same way that a ROM Rose node would you must add an entry into your /etc/ax25/ax25d.conf file that looks similar to the following:

```
#
[VK2KTJ-5* via 4800]
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsuplnk rsuplnk rose
#
```

Note the special syntax for the local callsign. The `*' character indicates that the application should be invoked if the callsign is heard in the digipeater path of a connection.

This configuration would allow an AX.25 user to establish Rose calls using the example connect sequence presented in the introduction. Anybody attempting to digipeat via VK2KTJ-5 on the AX.25 port named 4800 would be handled by the rsuplnk command.

18. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure you don't miss it.

You make the association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

19. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related to the AX25 and NetRom kernel software. These files are normally used by the AX52 utilities, but they are plainly formatted so you may be interested in reading them. The format is fairly easily understood so I don't think much explanation will be necessary.

/proc/net/arp
contains the list of Address Resolution Protocol mappings of IP addresses to MAC layer protocol addresses. These can can AX.25, ethernet or some other MAC layer protocol.

/proc/net/ax25
contains a list of AX.25 sockets opened. These might be listening for a connection, or active sessions.

/proc/net/ax25_bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

/proc/net/ax25_calls
contains the linux userid to callsign mappings set my the axparms -assoc command.

/proc/net/ax25_route
contains AX.25 digipeater path information.

/proc/net/nr
contains a list of NetRom sockets opened. These might be

listening for a connection, or active sessions.

/proc/net/nr_neigh
contains information about the NetRom neighbours known to the
NetRom software.

/proc/net/nr_nodes
contains information about the NetRom nodes known to the NetRom
software.

/proc/net/rose
contains a list of Rose sockets opened. These might be listening
for a connection, or active sessions.

/proc/net/rose_nodes
contains a mapping of Rose destinations to Rose neighbours.

/proc/net/rose_neigh
contains a list of known Rose neighbours.

/proc/net/rose_routes
contains a list of all established Rose connections.

20. AX.25, NetRom, Rose network programming.

Probably the biggest advantage of using the kernel based
implementations of the amateur packet radio protocols is the ease with
which you can develop applications and programs to use them.

While the subject of Unix Network Programming is outside the scope of
this document I will describe the elementary details of how you can
make use of the AX.25, NetRom and Rose protocols within your software.

20.1. The address families.

Network programming for AX.25, NetRom and Rose is quite similar to
programming for TCP/IP under Linux. The major differences being the
address families used, and the address structures that need to be
mangled into place.

The address family names for AX.25, NetRom and Rose are AF_AX25,
AF_NETROM and AF_ROSE respectively.

20.2. The header files.

You must always include the `ax25.h' header file, and also the
`netrom.h' or `rose.h' header files if you are dealing with those
protocols. Simple top level skeletons would look something like the
following:

For AX.25:

```
#include <ax25.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
```

```
sockaddr.fsa_ax25.sax25_family = AF_AX25
```

For NetRom:

```
#include <ax25.h>
#include <netrom.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_NETROM;
```

For Rose:

```
#include <ax25.h>
#include <rose.h>
int s, addrlen = sizeof(struct sockaddr_rose);
struct sockaddr_rose sockaddr;
sockaddr.srose_family = AF_ROSE;
```

20.3. Callsign mangling and examples.

There are routines within the lib/ax25.a library built in the AX25 utilities package that manage the callsign conversions for you. You can write your own of course if you wish.

The user_call utilities are excellent examples from which to work. The source code for them is included in the AX25 utilities package. If you spend a little time working with those you will soon see that ninety percent of the work is involved in just getting ready to open the socket. Actually making the connection is easy, the preparation takes time.

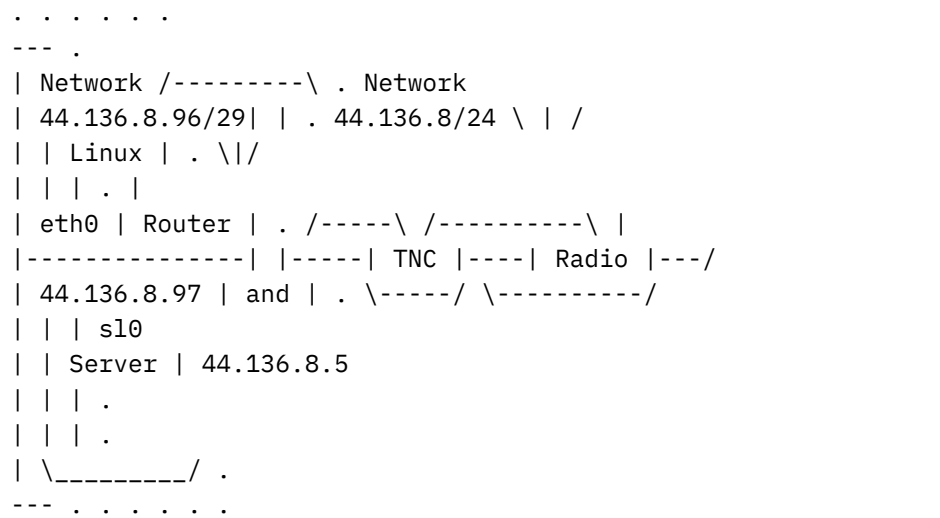
The example are simple enough to not be very confusing. If you have any questions, you should feel to direct them to the linux-hams mailing list and someone there will be sure to help you.

21. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

21.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
kissattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

```

*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256
color) only

Detail
I haven't tried this one out yet. It is a suite of tools for
circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at
www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed
from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so he can use it on his laptop while working VHF contests. He is also writing it as an excuse to learn ncurses programming. His goal is a general purpose contest logger that a user can specify new contests in as they come about. It supports all bands and modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.
You can obtain the contest package from: sunsite.unc.edu

<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page
<ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document
appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-
HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the
following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com
<http://www.hboc.com/linux/index.html> and www.lan.com
<http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-
personal.engin.umich.edu <http://www-
personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the
following two locations: wheel.dcn.davis.ca
<http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and
fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in
Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at:
DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite
communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor
G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk <ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from:
ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from:
sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version
is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It
addresses some of the quirks of RSPF v2.1, the version in NOS
which means that it is incompatible with the NOS version. It
will also allows remote/local queries via a tcp session for
debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

[This followup was posted to rec.radio.amateur.misc and a copy was sent
to the cited author.]

In article <6f9gn2$a80@bgtnsc02.worldnet.att.net>,
RWood54741@worldnet.att.net says...
> I plan to attend the Dayton Hamvention for
> the first time.
> I would really like to be admitted to the flea
> market on Thursday which is dealer set up day.
> Will the $15 ticket that is available by mail get
> me in on Thursday?
> If not, is there some way to get in on Thursday?
>
> Thanks,
>
> Bob

The only way to get in Thursday is to have a dealer pass. The regular
and flea market ticket are only good Fridau thru Sunday. Security is
fairly tight on Thursday and Monday when dealers are moving their goods
into and out of the arena. The flea market itself, except for some of
the dealers is only open staring Friday morning and then you'll need a
flea market "space" pass.

The only other way to get in Thursday is to sneak in but IF you're
caught, it's been reported that the fine is $1000 and 2 days jail time
(based on previous reports of people caught trespassing before and after
the Hamvention.

WANTED: Collins 51J4 or R-388A

Can pay up to $250 for a unit in good physical & operational condition with standard accessories. Candidly, I realize the prices of these Collins/military models are all over the map, but this is what I can afford to pay. May not find one on the net, but maybe I'll run into one via another source.

Email with details if you have a unit you wish to sell at this price.

Have Hewlett Packard Laser Jet II printer could swap as well. Can provide details on HPLJII if you're interested. This is one of HP's most desirable/dependable printers and least expensive to operate. Supported by Windows 95 as well.

Thanks

Actually, BA, this is a good thing. When they are here on the NG, they are not on the air. We can easily filter them out via computer; they are more difficult to ignore by radio.

So upgrade, and keep the rig. We'll see ya on the air! Oh, one more thing.....to experience ham radio the way it USED to be, give the CW subbands a try. You are in for a treat!

>going on.

One thing I have noticed is that some CB'ers have moved from CB to amateur radio. Many use 2 Meters and 70cm.

Another is that the story you related sounds to me like an FCC violation. He didn't transmit his call, and he is retransmitting .

One interesting item to note. The FCC cannot control who actually gets licenses. In my area, we have a few people who live in County/State sponsored apartments. Some do have mental handicaps and hold an FCC license. Every once in a while we get, "Break er on 9 for 359. Whisky bravo alpha charlie dixie in winterland" blah blah. One of those guys just tossed his mike or HT to a buddy of his.

It is an annoying problem to say the very least.

Yeah, but lets see if they do it right. SGC did *not* do it right.
A basic HF transceiver needs to be 100 watts right out of the
box. You need that if you ever want to drive an amp, and you
need that if you want to compete on an even footing with
other amateurs running barefoot. Another QRP rig misses
the target. Now making the rig 100 watts costs about $100
extra, but that's non-negotiable as far as I'm concerned,
even if it forces the street price above $500.

Ideally, I'd like to see a big enough heatsink fitted that
a fan would not be necessary. There's no need to make
this radio the size of an IC-706. It should be targeting the
low end desktop.

The bit quoted below about leaving out high technology
also completely misses the mark. High technology is
cheaper, if done intelligently. A $5 DSP chip can give
you what costs over $175 to do with analog. The new
Kachina radio, while not in the target price class, still
points the way toward how to build a modern radio. Do
all the heavy duty filtering, processing, and mod/demod
in software. The only thing analog in the radio should be
the RF front end and the audio output stages.

I'd like to see almost all mechanical controls removed
from the radio. They're expensive due to the interconnects,
are the most failure prone components, and should be
replaced by a multifunction membrane touchpad. With
intelligently written control software, that can be more

flexible than mechanical controls, and cheaper too.

Note that next to the PA, the largest cost of this
radio is in the firmware. That can be pared back to
basic functionality in the base radio to hit the target
price. If the firmware is stored in eeprom, feature
upgrades could be sold and downloaded into the
radio over the internet.

(The base radio need be no better than an old
Galaxy V or SBE-34.)

And ADI could offer a software development kit so that
independent firmware could be developed for the radio.
I'd pay up to $200 extra to have that.

A radio like this could be built to sell for a street price
of $475, but I'd be willing to go as much as $575 for the
base radio. ADI could offer higher profit accessories for
the radio, such as an external autotuner. Keyer firmware
could be an extra cost upgrade, more filter choices could
be an extra cost upgrade, direct PACTOR mod/demod
could be an extra cost upgrade, etc. Even if the margin
on the base radio is paper thin, money could still be made
on it via these optional firmware features.

Why not protest the issuing of a license due to the individual
being unfit? He may be able to pass all requirements, code and
technical. But if his character is faulty, strip him of his license
and even his citizenship. Even if he has not commented a crime.

I think that would make many folks happy.

Fellow ham radio operators
I did not post this crap. But I know who did and I don't think that you
or I will be seeing any more of it. Mr James Obrien KD4CDB is no longer
with mindspring. THis is a newsgroup and I thought that I would spead
the word so we could all rejoice in Mr Obrien's misfortune. I hope now
that the real idoit is gone the News group will return to normal.
Again Mr Obraindead is no longer with mindspring.com. Call Harry Smoak's
office and thank him.
73 from Oris

>It is also a violation of 97.305(c) and 97.113(b).

You shouldn't speculate. We don't know what 10m freq'y he's making
his transmissions on so we'll dismiss your citation of 97.305(c).

Now regarding 97.113(b), we also don't know the exact words he's using;
something of the form, "Is this amateur radio freq'y in use? This is
amateur radio station k#xxx listening for any other amateur radio
station on this amateur radio ten-meter band, which begins at twenty-
eight point zero megahertz" is a long-winded version of what we're
always supposed to do: Determine if a freq'y is in use prior to calling
CQ (which certainly *is* permitted in Part 97).

At least we now what what camp you reside in regarding this issue.

I plan to attend the Dayton Hamvention for
the first time.
I would really like to be admitted to the flea
market on Thursday which is dealer set up day.
Will the $15 ticket that is available by mail get
me in on Thursday?
If not, is there some way to get in on Thursday?

Thanks,

Bob

While costing slightly more than the $500 target, an existing radio
that meets these specs is the ICOM-707. I obtained mind for $730.

While not offered in the US market, there is another one.
Take a look at
http://www.chollian.net/~hl1aqs/rig.htm
It says it costs 880,000 Korean Won.
Recent Dollar/Korean Won exchange rate has been fluctuating
between 1400 - 1600 Won/Dollar.

I have seen the rig at one of the Hamfests here in Korea.
I didn't like it too much mainly due to the poorly done cosmetics.
Being tuned the radio just for 3 minutes, I have no idea about its performance.

If interested, contact with the company directly.
The web page has contact information.

Regards,

The following is just my personal opinions and experiences:
Try coiling the TV power cord , coil it the same way many new
electronic devices come coiled in the box. Basicaly,fold the power cord 3 times
onto itself about 6 inches long, then coil the remaining around this, it will
look a little like a hangmans knot...this coil will act as an RF Choke and keep
RF from riding in to the TV via the electric lines.

Many better built TVs have a choke already built into them. I have never seen a
Zenith or Sony have this problem. I have run across a couple RCA's that had the
problem and coiling the power cord helped, buying a couple Radio Shack in line
chokes also work well when wrapping the power cord around them.

Radio Shack Catalog Number 273-104
Last I looked, they were under $10 for a package of 2.
Radio Shack also sells a 6 outlet powerstrip with broadband noise filter
that will give about 60dB of antennuation to RF riding in from outside power
lines.

Sorry, I don't have that catalog number. Last I looked it was under $30.

I have heard of people using a small metal can to wrap the electric cord of the
TV around to create a cheap home brew choke.

Try the easy cheap ways first, they may work very well.

In my experience as Chairman of the Interference Committee for a large HAM club, and 16 years experience working for one of 6 largest CATV companies in the USA, I have yet to see a HAM causing interference to a TV because he was doing something wrong.

I have seen interference because the electronic manufacturer chose to save a few cents and not put proper filtering into the power supply of a product such as a simple choke.

I have seen interference on Channel 18 on Cable TV from a local repeater tansmitting on 145.250 which is the video carrier of Channel 18 on a STD cable system. I have never seen any other frequency cause a problem, nor any other channel recieve interference from HAMs. Even in this case, the problem was not caused by the HAM transmitter, the problem was usually from cracked hard line belonging to the cable company, loose or bad fittings on the CATV line, or bad poorly shielded cable lines in the home usually installed by the customer them self. I have even found some TVs having poor shielding on the line feeding their tuners or possibly the tuners them selves being poorly shielded. Again this will only cause a problem on channel 18's video.(IMHO) A simple call to the cable company should solve this problem, or determine it is the TV if the cable tech hooks a test set to verify the lines are free from ingress.
If you are hearing the audio of an AM or SSB transmission (probably HF) on a TV, Stereo, CD Player, Record Player, Tape Player... try coiling the electric cords first...this may fix your problem.

Have you ever looked at the manual that comes with electronic entertainemt devices & see something like This device must accept any electronic interferenc it recieves and may not cause harmful RF interference. Well the manufacturer is telling you that this device may not be well filtered and is probably not up to snuff (IMHO).

It is not the fault of the Amateur Radio Community that inferior consumer electronics are being bought and sold. An electronic device that is up to FCC spec will not have these problems. If you buy an electronic device that is not up to snuff, you may have to contact the manufacturer or pick up the chokes and filters yourself.

I recall being called out on an interference call, a gentleman with a famous brand TV was hearing SSB transmissions form a MARS operator 5 houses away. The MARS station was not getting in the CATV line, no interference could be heard or seen on our Zenith and Sony 13 inch sets. Nothing could be seen on the Cable with our spectrum analyser. The MARS operator allowed us look at his shack, a first class station, the operator was also an engineer for a local commercial radio station, he knows his stuff and runs in spec (IMHO). Being a good HAM, he helped us in everyway he could.

We found the problem was in this famous brand TV, a pretty good TV in all respects except it could have used a choke on the AC line feeding the power supply. When we put a combination of Radio Shack in line chokes and the power strip with broadband noise filter, no interference could be heard on the TV even when the MARS operator went up to full legal limit, 1500 Watts.

Consumers need to be made aware that just because they bought a poorly filtered electronic appliance, the rest of the world should not have to adjust their lives to acomidate them.

Let me make an analogy, what if the TV was so bad, that the nieghbors cell phone, the police and fire radios up the street and the nighbors lawn mower caused interference to the TV, would you expect everyone to shut everything off because you have a poorly designed TV? Of course not.

The answer is either contact the manufacture and ask them to supply the proper choke/ filtering or get them your self or have a competant technician install them for you.

Your interference is nothing that can not be rectified. Many manufacturers know they have a problem and they are betting that most consumers will not live near a HAM or commercial AM radio station, they save 50 cents or so on each device they sell, and when the occasional consumer is knowlegable enough to complain, they will have the problem fixed by installing the parts that the device should have come with.

Don't get mad at your nieghbor, relax knowing there is a simple cheap solution and enjoy life.

Again, all the above is my personal opinion and experience. I hope it helps and enlightens.

Hop the fence, I suppose.

Why this desire to get in on Thursday? There's few flea market people there anyway - the majority show up early Friday morning.

Trying to get a flea market advantage?

I don't have to speculate. He said he was doing this on 28.05 Mhz.
That's not in the amateur phone allocation.

>Now regarding 97.113(b), we also don't know the exact words he's using;
>something of the form, "Is this amateur radio freq'y in use? This is

Again, no speculation is necessary. He *said* he was broadcasting
to an unlicensed audience. That's forbidden.

>At least we now what what camp you reside in regarding this issue.

I should hope so. I believe in obeying the rules, even when I don't like
the rules. I'd hope other amateurs would too. But I can see that you're
on the side of those amateurs who willfully violate amateur rules without
even a sham pretense to the contrary.

4788. Power Line Interference Question

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-25 00:00:00 UTC
From: avitko@harris.com
Message-ID: <6fbob0qhk1@nnrp1.dejanews.com>
Source record: 175076
Cross-posted to: rec,radio.info,rec.radio.amateur.policy,rec.radio.amateur.misc

The radio reception on H.F. in my community (Cocoa Beach, FL) is severely limited by a constant buzzing (static) which I believe is being generated through power line radiation (bad connections or transformers). The noise is almost always there, is not conducted through the AC line (its radiated, it can be heard on battery powered receivers and in the car)and occurs from below the AM broadcast band up through 35 MHz. I have also determined the noise is not localized to my house (it can be picked up on my AM car radio throughout Cocoa Beach, some areas are more severe than others). The noise is less severe in adjacent communities.

Even though the noise is wideband, it appears to have components that peak about every 20-30 KHz, and really disrupts radio reception. Also, the noise is less in the summer months (replaced by lightning static which is not continuous) and also can lessen during periods of rain. There is also an occasional "howling" sound added to the noise which is of even stronger amplitude.

This entire noise issue is very annoying and ruins the radio hobby in my community. Does anyone know of any regulations or avenues to take to solve this problem? The power company has refused to address the problem, but I believe that they donot have the right to interfere with broadcast on the H.F. bands.

Any help or suggestions would be gretly appreciated.

Thanks, Al

1. Cut Diode D16 on the main board.
2. Power the radio off.
3. Power the radio back on, holding the A=B button.

Gary Coffman wrote a lot of good stuff, which I clipped.

Then he said a dumb thing:

>
> (The base radio need be no better than an old
> Galaxy V or SBE-34.)
>

If a radio "no better than" a Galaxy V or SBE-34 were available today, even at a retail price of $300, they would not be worth taking home.

Even in their day, they were low-end, drifty, barely acceptable equipment, and outclassed by most every other rig available at the time.

Hans

They can bring out all the sub-$500 hf rigs they like.
If I was wanting to get started in hf, I would fork out
a little more and get a used Kenwood TS50 for about
$625-650. No bells and whistles but it makes a good
simple starter rig and a smoking contest rig. I have
made 2 clean sweeps with mine and some decent
scores in NAQP, WPX and CQWW. I worked all of
these with just the 50 and a 300' wire loop. The
secret of the TS50 is that it will put out a good clean
150 watts for hours on end without so much as getting
warm. If you can live without a built in keyer and
VOX, this rig is the way to go.

I hope the new hams will check out the used market
rather than forking out for some watered down new
budget rig, or worse, something completely off-the-wall
like the new Yaesu FT600 or the Alinco DX70T.

Just remember,,,,caveat emptor.
It's best to deal with someone you know, especially if you
are new to this. There are rip-off's out there but fortunately
in ham radio, they are few and far between.

Holy cow!! I guess all those years I broadcast code practice on 10
meters to all those unlicensed folks who listened in that wanted to
learn the code so they could become licensed, I was breaking the rules
huh?
I don't understand why it gets some folks shorts in a wad about running
off the illegal ops, but too bad, it dosen't stop me. The FCC has made
the statement to several different individuals including myself, that
they are not going to consider it a violation of the rules for doing so.

>DavidC AA1FA
There's still plenty of us that appreciate Steve's searching and
posting.
I done a similar trip on the kenwood TS570D on behalf of myself and
anyone else here in the UK that wanted to listen.
After chasing several large and small US dealers best price was 749UK
pounds (dollar 64 to the pound) this radio was not far short of double
this price over here at the time.
Of course this radio has come down in price both here and the US but
we're still being asked to pay through the nose.
Ripped-off is doing the term an injustice.
This is why I'm collecting a 98 Z28 later this year,probably in DA due
to no sales tax, the car is available in the UK at nearly 23K pounds
ouch!

I just noticed that everytime CNN stops regular programming due to "Breaking News," the violins in the backround music tap out "HI HI HI" in Morse code. You'd think they would have instead chosen "XXX XXX XXX" (the "Urgent" signal).

>>*always* supposed to do: Determine if a freq'y is in use prior to calling
>>CQ (which certainly *is* permitted in Part 97).

>Again, no speculation is necessary. He *said* he was broadcasting
>to an unlicensed audience. That's forbidden.

He said no such thing. No mention of "broadcasting" was made.
My example above would be a legitimate "QRL?" - if an unlicensed
audience on 10m were to hear it, I would have no control over that.

>>At least we now what what camp you reside in regarding this issue.

>I should hope so. I believe in obeying the rules, even when I don't like
>the rules. I'd hope other amateurs would too. But I can see that you're
>on the side of those amateurs who willfully violate amateur rules without
>even a sham pretense to the contrary.

The FCC's interpretation of their own rules is what matters, not
your's. And the FCC's opinion is that what these amateurs are doing

is not in violation of its rules.

It is theoretically possible to receive a signal, mix it with a local
oscillator and downshift in frequency. But it is not something you can
assemble in your kitchen for a couple of bucks. Furthermore, you need an
accurate oscillator, preferably with a digital readout. I don't think it is
worth your time to mess around with it. You can buy a good scanner with an
aviation band for about $150. It has all kinds of features you will find
useful.

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

The Kenwood R2000, and R5000 along with the Yaesu FRG8800 had optional
VHF converters. I don't know if it would be possible to make use of one
of these converters for your Lowe HF-150. Might be something to look into.

Cecil,

A nice and elegent proposal. My only quibble would be some kind of a limited term entry level license. (I notice that you did not mentention the present Tech license so this may fill the requirement) We really have no need for the 6 tier system we have now. Limited priviliges but all mode operation on HF and VHF plus a 2-5 year non renewable` term, all Amateur Priviliges for the General class.
Since It looks like we are going to have some form of CW proficiency testing well into the future, 5 WPM is a good comprimise. Those who find they enjoy using CW will be able to take it to any limit they want to, as do the digital people today. This proposal does not deny anyone anything, except for those who have an unmoving personal stand about the CW requirement.

Gary:

I have looked into building a DSP receiver. I figure four or five
ICs: RF stage, Mixer/IF stage, DSP for filtering and detection,
and an AF stage plus a microprocessor to run things.

The hard part would be programming. But what you have is a reconfigurable receiver that can have any mode added.

DSP is becoming the heart of communications. A typical CD player has a DSP chip, filter chip and audio chip. DSP is used in the audio front ends for FM broadcasting transmitters.

It would be easy to make a DSP transceiver. It would really drop the cost. Of course you have already made that point.

I have a TS520 hf rig I would like to sell or trade for a good HT... would
like an older dual-band, but will take newer 2m. An MT1000 would be perfect
as well (VHF, complete).
the 520 works great, face in good cond., case fair (cosmetic, no dents)
Will sell outright for $200.
email for details or phone number!
thanks,
Randy

Actually a large enough question pool still implies the need to learn. Yes
one can memorize all of the material, but memorization also worked on
the tests in the 30's, 40's, 50's and 60's too. Amateur radio while
classified as a service is supposed to not be a professional service but
rather something that most of those interested in the terms of the service/
hobby can enter into a

I'm not going to quote your entire response, but your questioning why
it's important to remember that until 68, every ham with HF privileges
except novices had exactly the same privileges rather the messed
up nonsensical system which exists now. Most people on HF
seem to be bunched in the general sections on phone, and unless
one is a dxer, the cw extra portions aren't of much use either. In other
words experimentation and play are supposed to be part of the service,
thus the need for professional standards is not outstanding. Someone
willing to memorize the material for an exam, and then learn how
other hams talk and conform is what should be expected of hams,
not some esoteric imitation 2nd year engineering course, and I note
that not many engineering students seem to be interested in ham
radio either. Once again, taking cars as an example, the driving test
doesn't test every driving condition, not even in simulation, and one
needs to answer only so many questions on the written portion even
if getting a CDL to renew. Somehow if something that requires
some professional skills like driving a truck doesn't try to screen out
everyone but a select few, why should ham radio?
effect, we've created a class structure that doesn't really do any
thing except offer the ability to have callsigns with a certain structure
if the license class is high enough.

Why make it so complicated? Why not just issue a ham license at birth. It could be part of the birth certificate. Heck while were at it why don't we just give out a drivers license, pilots license, and medical license at the same time.....

>> 4) Drop the ADVANCED class Amateur Radio License
>> 5) Drop the EXTRA class Amateur Radio License

Numbers 4 and 5 are not my idea.

I want to see [just] 4 license classes: Tech, General, Advanced and
Extra.

Every new ham would start as a Tech (no code exam). Then their upgrade
path is, learn 5 wpm code and pass the General written exam to become
a General class ham. If they want to go past that license level they
speed up their code to 13 wpm (I would prefer this to be 10 wpm but
will leave it alone for now to make it easier for the FCC to
understand our filing) and pass the advanced written. To reach the top
they go to 20 wpm (would prefer 15 wpm but will leave it alone for now
for the same reason as above) code and pass the extra written exam.

This is a simple straightforward path for the hobby (here in the USA).
It is also not too complicated a change to propose to the FCC. Anyone
interested in helping me do this?

>I'm just trying to fit in.

Your ratio is way off. There are only a few frequencies in those bands where jamming occur and it's done by a few idiots. A small handful compared with the normal QSOs that do take place. You can't let a few morons ruin it for you. There's PLENTY of frequencies for amateurs to use. Thankfully the idiots stay on only a few.

Sorry, not everyone. Only you, simply because your posts are so
transparent and read like a cheap novel. Act like a newby asking all
sorts of stupid questions, then you start acting like the same Drew in
about a week. You don't fool me or anyone else. Besides, you act like
someone who knows a lot about this newsgroup for someone being "new."
The proper question for you to have asked would be ... who's Drew,?
Why would you think I'm him? If you wouldn't act like such a moron,
you could use your real name instead of all the names you have used.
Funny, since your new handle came on the other handles don't post
anymore. Also, how come all your other names only post on or about the
same time of day. Never do you post in the early morning or afternoon.
Neither do any of the others I have accused you of being. You're a
detectives dream because you don't cover your tracks well at all. It's
rather fun to prove that you're the liar we all know you are. Knock
yourself out Drew, you only prove the obvious. Your problem is that
you post anonymously proving you have no guts and no convictions. No
call, no balls. Flame on cockroach.

No special authorization required - read Part 97,
You can send practice code as well!!

It also says very plainly:
"ï¿½97.101 General standards.
...
d.No amateur operator shall willfully or maliciously
interfere with or cause interference to any radio
communication or signal. "

Note that there is no reference to "legal" or "illegal"

How odd. CB Rambo disappears, and TwinsRadio appears. Then TwinsRadio
disappears and JamTheHam appears. All three have a fixation on the
80 and 20m riff-raff frequencies.

Tell us, Drew, does AOL allow you to change your account name at
will, or do you have to close one account, then open a new one
for a fee?

>"Where's that JamTheHam? I want to hear him talk tough!"

Why does that sound familiar?

Hi Drew - A CB'er who obtains an amateur license does not undergo any
magical transformation; years of bad-habits are thoroughly ingrained
within his every pore. You are our default example which epitomizes
this fact.

>"Where's that JamTheHam? I want to hear him talk tough!"

That's incorrect. Incentive licensing began earlier than '68. 1923
to be exact, with the creation of the Extra First Class amateur
license. Requirements to acquire the new ticket: Licensed for two
years, pass an exam similar to the then commercial first class,
20wpm code, and have a clean record. Holders of this new license
were given frequencies no other licensees could use.

Examiners were overwhelmed with hams wanting to upgrade to this
new ticket, due to the incentive created by offering new and
exclusive frequencies.

Being fairly new to the jamming, belching, farting, and overall chaos on 14.300Mhz this afternoon, I heard an unidentified station talking about "Raincoat Charlie." He first announced a "Raincoat Charlie Alert", then began saying "Play the chicken, Raincoat Charlie, play the chicken." Shortly thereafter, two stations began arguing about whether "Raincoat Charlie" was still alive or had died in 1993.

Who is this "Raincoat Charlie", and who/what is the "chicken?"

Your not modernizing it your taking everything away from it that makes
amateur radio what it is.

I fail to see the benefit of having 6 license classes. Most countries probably have two or three at most.

Why keep the Novice class? Most new hams start as a Technician these days.

The Tech Plus really just gives 10m phone, which is ok when the sunspot cycle is ok.

And why have 13 wpm code the test to get on all hf bands?

>Time honored practices ... I guess you must ride a horse and not a car
>then, right? I guess you never fly anywhere on an airplane, right?

Its amasing how things can get twisted.

I drive a car and I do fly a plane, when i want to travel long
distances. Actually if time is not critical, I often perfer to drive
long distances.

When I suggested time honoured practices, I was trying to help protect
the parts of amateur radio that make it what everyone wants.

If you take to much away or make it too easy to get to the higher
classes then you are helping to destroy the vey aspect of amateur
radio that is why most people want to get in, 'its global respect'.

Oh, by the way, I am a Canadian. We have 4 classes. The basic, above
30 mhz all modes. The 5 wpm, which gives you 160 and 80 meters. 12
wpm which gives you all hf and the advaced which gives you extra

technical priveledges.

We have no subbands anymore and our bandwidth, below 30 mhz, is 6 khz.
I think one band has an exception but I am not sure.

4859. Let's Talk About JAMMING on Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-26 00:00:00 UTC
From: jamtheham@aol.com
Message-ID: <1998032602201401.VAA06656@ladder03.news.aol.com>
Source record: 175108

Tuning around the dial as I type this, I hear Polly vs Pork Butt with several unidentified jammers on 3894.5. On 3950, someone's been keyed down and playing music for the last several minutes. BTW, don't these idiots realize how terrible music sounds on sideband? 3901 features a nice argument, complete with colorful language, insults such as "if you weren't such a dumb Southerner", and jamming in Morse Code.

After listening to all of the above, why in the world would anyone want to spend the necessary time and money to obtain an amateur radio license. If a government official or politician were to listen to this junk, what would stop them from using abolishment of the amateur radio service as a great campaign issue? I can hear it now: "We need to do this 'for the children', to protect them from the filthy, profane, and indecent influences of these ham radio operators."

Leslie,

The Technician Plus has HF privileges on 80, 40, 15, and 10 meters--not just 10 meter phone. It (as was the novice) designed to get the holder on-the-air to increase in proficiency and upgrade. In the not too distant past the Novice ticket expired and was not renewable. The only route for those who would not get their code speed up was to upgrade to the old Technician class by taking the General written.

Sounds like the "Liberty Net" is winding down. Tonight's topics of conversation included statements that no-code Techs would soon be getting voice privileges on 3900-4000Khz and that the present occupants of 3950 had better move elsewhere or they will be run off by the new no-coders on 75. Also, lotsa babble about one of the participants living in a shack with no electricity and running his radio off of a 12-volt battery. Why this was deemed an important and pertinent issue for them to discuss is beyond me.

Looks like "that's all folks" for tonight. The endless tape lop of marching music in the background has ended and has been replaced with the Pink Panther Theme.

Hell, this is better than prime-time television!

Michael, during what most of hams now consider the golden age, namely until 1968 and incentive licensing, there was no difference in privileges between a conditional, general, Class A or Advanced or extra class license. Ham radio didn't die then, and in fact was undergoing steady growth. It should also be noted that morse code has not been effective in getting rid of lids, or in somehow disciplining them. The present license setup is a joke, with too many classes, one class barely in existence with few newcomers entering that way, and no real apparent need for the course. We also have three different technician classes in effect, namely those who got licensed before 1987 with that class and took the general class exam and passed with a 5 wpm code test, those who took the exam afterwards, passed 5wpm and have a tech plus license or had a novice license and upgraded to tech, and those who have passed the novice technical exam and tech technical exam.

It truly doesn't make sense, and all too many newcomers aren't bothering to either one become hams or two bother to learn code and so are left with tech as an option. With the exception of coherent CW, and those sending bursts of CW via meteor paths in the ionosphere, CW isn't exactly even close to cutting edge anymore, and frankly doesn't really seem to interest most hams judging from the activity I can hear. While to you, such a scheme might seem the equivalent of no licensing, I note that some people have difficulty with the written novice and tech exams today, you know the ones folks claim are so easy. Of course, I suspect that actually the exam isn't all that much easier than those of yesteryear, it's just that folks object to question pools.

I need a valid URL for the National Amateur Radio repeater database.
the one I currently have is no longer working.

Need to confirm repeaters in my D.E.S. area for ARES group

I'm sure your attorney and your insurance company would agree that the second post is better than the first! It's not "rumor-mongering" that you are guilty of, by the way.

Answer: Because there are hundreds/thousands of frequencies where one can operate without having to listen to the garbage on those spots within the 75 meter band.

Now a question for you:
With such a negative connotation, why did you choose "Jam-the-ham" as a screen name?

With all due respect, JamTheHam, I think you are spending too much time focused on the darker side of our hobby. Come on over to the frequencies where people are civil and where they have meaningful conversations. Check out the service nets, such as the maritime mobile group, the missionary support service, the Red Cross Disaster Relief gang, to mention only a few.

It's your brain. You are what you eat.

Sorry to break the bad news, Art. CW is alive and well. In fact, the CW subbands are as busy as I have ever heard them during my 35+ years on the air.

For more about the success of Morse as an operating mode, see QST Magazine, April 1998, page 9.

>Ham radio didn't die then, and in fact was undergoing steady growth.

As was to be expected, back then ham radio was considered to be "high tech".

>It should also be noted that morse code has not been effective
>in getting rid of lids, or in somehow disciplining them.

Not entirely true. The morse code test is not a perfect filter. Then again,
in life there are no truely perfect filters -- some flotsam is always going
to get through, even if it is a couple dozens parts per million. The
No-Code Agenda likes to point to a couple dozen people on HF as "examples"
of how the code filter doesn't 'work'. I, on the other hand, prefer to
point to the other ~500K HF-eligible amateurs as examples of how it *DOES*
work.

>With the exception of coherent CW, and those
>sending bursts of CW via meteor paths in the ionosphere, CW isn't
>exactly even close to cutting edge anymore, and frankly doesn't really
>seem to interest most hams judging from the activity I can hear.

CW is still used extensively in "other" areas. For instance, most weak
signal and distance work is done in CW. CW is only "not useful" if you
close your eyes and have pre-determined that you don't "like" CW.

>While to you, such a scheme might seem the equivalent of no licensing, I
>note that some people have difficulty with the written novice and tech
>exams today, you know the ones folks claim are so easy.

That's because, quite frankly, we are pulling people from the left side
of the bell curve. Our licensing standards should not be designed to
accomodate those people 3 standard deviations out on the left tail, just
because we want to "feel good" about ourselves and be politically-correct
with the 'all inclusiveness'.

>Of course,
>I suspect that actually the exam isn't all that much easier than those
>of yesteryear, it's just that folks object to question pools.

The presense of a question pool undermines the very concept of learning.
No credible educator would ever support such a concept to test people
on a particular subject matter.

Sounds like you're trying to deflect attention from these kooks. Just ignore them and they'll go away. I don't think that will work with this group, though. In fact, I think I will begin posting their activities here on a daily basis so that all the world can see what a fine group of amateur operators we have here in the United States. Maybe then, something will be done about it.

Oh, I have heard the maritime mobile group. 14.300 and 14.313. 90% jamming and profanity. In fact, it was during a so-called "maritime mobile net" that I heard about Raincoat Charlie and the Chicken yesterday afternoon.

After spending several hours listening to 20 and 75, I felt it was most appropriate. That's what hams do, don't they? Jam each other? Sure sounds like it. The ratio of jamming to QSO was probably along the lines of 10-to-1. I'm just trying to fit in.

> in adjacent communities. ...

Hi Al,

The salt in the air has everything to do with it. You'll notice at night, especially when it is humid, that you can see arcing at the transformers, that is the source of your noise. FPL can spray these areas with a corona spray (not beer).

It is illegal for the power companies to emit radiation within any radio service allocated frequencies. Have you tried contacting FPL and ask them to take care of it? I used to live on the beach on A1A at Patrick AFB. I wasn't a ham then but an avid SWL at the time and I can appreciate the noise you are talking about.

I recall reading in older radio rags about TV cable and power companies being fined by the FCC for not doing anything about these type of emissions. If you can find them you can use them for ammo with FPL.

JPS and MFJ make antenna noise cancelling units that MIGHT or might not be somewhat effective if you need to consider a another avenue.

Good luck...

It's a question of band space and time. Here in Israel and AFIK all of
Europe, Asia and Africa we have 80 meters to 3800 and 40 meters to 7100.

On 40 meters as a tech plus you will never hear any DX stations
except South/Central America which is about the same time (and propagation)
as the US.

80 meters fares better, but there is a time difference, in order to
get anything from Europe or east, you need a dark to dark path.

For example, here we are currently 8 (due to daylight savings time)
hours ahead of the east coast of the US. So I would have to call CQ at
about 5-6am, (0200-0300 UTC) for you to hear me before the sun rises and
kills propagation.

As the day gets longer in the northern hemisphere this will become more
and more difficult.

I know nothing about propagation the other direction, e.g. Australia east
to the US, but when I lived in Philadelphia, it seemed to work best
around dawn, but that was for SWL'ing.

In a few years, 10 meters will be open around the world all day and night.
(I hope) I have a friend with a 10 meter quad beam that had it pointed at
the US. It fell over in a storm about 3 years ago. Since propagation
is so bad, he has not bothered to fix it. :-(

Meanwhile 10 meters will open for an hour or so north/south near sunset.
Eventualy the openings will get wider in time and width (east/west).
By mid summer you should be able to work up/down the east coast and
out to the midwest.

73,

Geoff.

From: michaelr@michaelr.com
Message-ID: <6fdpjd$3ho$1@ionews.ionet.net>
Source record: 175138

QST QST QST QST QST QST QST QST QST QST QST QST QST QST QST

W0KIE SATELLITE RADIO NETWORK ANNOUNCEMENT

The W0KIE Satellite Radio Network announces the launch of a
listener supported news and views Internet mail list.

The W0KIE Satellite Radio Network can be heard Mon. - Sat., 9 pm
Eastern on SBS-6, transponder 13b at 6.2 wide band FM audio. If you can
see MegaBingo then you can hear the W0KIE network.

Special note for rec.radio.amateur.misc

The W0KIE Network carries the Houston Amsat net on Tuesday night and
This Week in Amateur Radio on Saturday Night.

Live Dayton Hamvention coverage will originate from the Rib Shack
from 9pm to 9:50pm Eastern and 11:30pm to 11:50pm Eastern Wednesday, May
13, Thursday, May 14, Friday May 15 and Saturday at 11:30pm. The Rib
Shack is located across from Hara Arena and just east up the street
toward the school. Look for the Rib Shack just behind the restaurant
located next to the car lot. An additional uplink is likely from the
Rib Shack at 5pm Eastern on Saturday, May 16. Telephone call-ins during
the uplink are welcomed.

Additional on the scene Dayton Hamvention coverage will be uplinked
compliments of This Week in Amateur Radio on Saturday May 16, at 9pm
Eastern.

All of the Dayton Hamvention uplinks can be heard via RealAudio on
the Internet. W0KIE Network will be streaming the Dayton uplinks at
http://www.ionet.net/~michaelr/audio.html with a 1 hour tape delay.

The mail list is open for any and all discussions about topics
discussed by W0KIE Network show hosts. W0KIE Network programmer
insider information will always appear here first.

Only three Internet mail list rules will apply.

1. Don't speak bad about any W0KIE Network programmer.

If I remember correctly that is only CW ... can not run any other data
mode! Not Pactor, Amtor, SSTV, etc. They can not even run 10m FM to
work thru the 10m repeaters.

Yeah, but it is a classic analog radio design. Cost can be reduced
by using a more modern digital approach.

Looks like a reduced cost standard analog radio. The selectivity specs
don't look good at all, and 10 Hz tuning steps are a bit crude for today's
digital modes. Still, it almost makes the target price, and it is 100 watts.

>the time.

A lot of hams cut their teeth on the old Galaxy. I did. It was a lot
more stable than a lot of the tube equipment out there in the same
price class (much better than my NC190 drift-o-matic), it packed
an astonishing 400 watt PEP (input) rating into a small (for its day)
box, and it was *cheap*. Selectivity wasn't great, third order intercept
was wretched, etc, but it sufficed as a cheap way to go SSB mobile
in the tube days. Its only real competition was the KWM-2 and the
TR-3, both of which were much more expensive.

Today, even the cheapest rig will be synthesized, so drift is no
longer an issue. If they follow my suggestion to go to DSP early
in the radio, selectivity as sharp as you desire will be just a
firmware upgrade away. Dynamic range may be less than a
top of the line radio, but hey, what do you expect for 500 of
today's dollarettes?

Nothing there about SMIRK that I could find.

4896. receiving SW freq higher than radio normally tunes

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-26 00:00:00 UTC
From: mlamphier@hotmail.com
Message-ID: <6fe0p6$pd3$1@nnrp1.dejanews.com>
Source record: 175145
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment,rec.aviation.student,rec.radio.amateur.misc

I would like to be able to listen to communications from a local general aviation tower. These broadcasts are in the 120 MHz frequency range, but my shortwave radio (Lowe HF-150) receives only in the 30 kHz to 30 MHz range. Rather than buy another receiver I want to know if there is a way I can use my current receiver to pick up frequencies higher than it normally tunes. I seem to recall radio products that you attach to your antenna that convert from higher to lower frequencies or vise versa. Or is there some other simple way in which I can modify my receiver?

Thanks,

M. Lamphier

>Hmmmm. Let's see if we can work in TTT without it sounding like an autoalarm!

Those would have to be awfully long T's, Yrac! An auto-alarm will trip
only after it "hears" four four-second dashes with one-second spacing.

>Ever try this trivia question at the ham club? What is the significance of
>this signal: DDD SOS DDD

--- --- ---
That's too brief! It's DDD SOS SOS SOS DDD ... I used to send 'em while
working at NMO. Always preceded by the auto-alarm signal, of course.
10kW. Right smack dab in the middle of a Silent Period, too. In A2. We'd
wake up the entire Pacific, from Alaska to NZ, from the West Coast to
China. That's about the only time 500kc would fall silent. After we'd
finally get around to sending the QUM, 500 would burst at the seams
with everyone trying to catch up on passing their traffic.

It was a frightening thing having to send a DDD SOS, knowing at the
same time men were perishing in an icy sea. Only God knows how
many men make the ocean their watery grave, many of them still
trapped in their ships resting on the sea's bottom.

Now you need to look in Part 2 and study the definitions of
"radio communication" and "signal," then ask yourself whether
unauthorized transmissions fall into either of those catagories.
The FCC doesn't seem to think so. Luckily, we answer to the FCC,
not anyone on .misc.

As the FCC official commented to me, "It's not possible to interfere
with an unauthorized transmission."

4901. GE UHF MVP Question

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-27 00:00:00 UTC
From: David Gillam <d_gillam@mailexcite.com>
Message-ID: <6fghhs$9it$1@tor-nn1.netcom.ca>
Source record: 174899

According to the GE service manual for the high-split (450-470)
custom MVP receiver, the expected sensitivity is .3 to .35 uV, or .2 to .25
uV with the UHS option. I have heard people bragging that they were able to
obtain a sensitivity of .15 to .25 uV almost full quieting.
Having tried to peak one of these by following the GE maintenance manual, I
have been able to put it to spec, .30 uV but no more than that. Is it really
possible for these units the have a usable sensitivity under .3 uV ? I have
tried peaking the unit several times and the best that I have obtained is a
.28, but no more than that.

Any help would be appreciated!

David.

Last I knew AOL let you have up to four or five screen names at one time.
After you reached that limit you could delete an old one and pick a new one
but you could never re-use the old one. One of the complaints against AOL is
that this method made it easy for net trolls like Drew to just pop up with new
screen names to keep from being kill filed.

One other thing to watch for .. note the "camp" notation and watch the "V" after the model number .. in Japan many transcervers are offered as 10 watts output, not 100 watts out .. make sure you are comparing oranges to oranges, not oranges to tangerines ..

[FT-1000, a 200 watt radio in the USA, is offered in Japan as an FT-1000V which is 10 watts out, the FT-1000 is more expensive]

jamtheham spewed:

>Being fairly new to the jamming, belching, farting, and overall chaos on
>14.300Mhz this afternoon, I heard an unidentified station talking about

on 3/25/98 @ 1919 in a post titled 'John the Radio Preacher in
Pennsylvania' jamtheham spewed:

>Listened to this guy preaching on-the-air for what seemed to be an eternity.
>Last night on 3950 and then this afternoon on 14.300. Does he have a mental
>disorder, or what's his problem?

on 3/25/98 @ 20:57 in a post titled 'An Old Man Who Calls Himself
"Polly"' jamtheham spewed:
>He's currently on 3894.5, attempting to hold a QSO while a station he calls
>"Pork Butt" attempts interference in the background. How wonderfully
>entertaining to listen to!

on 3/25/98 @23:14 in a post titled 'Re: 10 meters opening wide +
outband CB crap' jamtheham spewed:

>Really. Even if it is a violation, who cares? Witness the blatant violations
>of the rules which occur daily/nightly on 20 & 75m. Nothing is done about it.
>Nobody cares. Just more of today's "do what you want and the hell with
>everybody else" society.

It seems that our friend jamtheham wants us to think he is brand new
to the relatively few on-going problems on the HF amateur frequencies.
But within a few short hours he goes from "fairly new" to rather
experienced. If I were "fairly new" I would be asking if these
problems "occur daily/nightly on 20 & 75m"?

No matter what screen name jamtheham replaced, if it did, the style
and general content this individual's posts all is too familiar.
jamtheham appeared suddenly with a flurry of posts, so I doubt the
veracity of his statements about being a lurker.

in many posts jamtheham spewed:

>And yet another Casey groupie heard from.

I figured I'd save jamtheham the trouble of yet another spew. Besides
I won't see any more of his crap in my newsreader. He has gone plonk
joining such luminaries as Drew Durnigan, Burt Fisher and James
O'Brien.

I am interested in finding publications/papers on AM transmitters using PDM (or PWM) technology.

Can anyone recommend any engineering books or literature dealing with the subject of class D transmitters?

Thanks in advance,

Al

You should see FT-1000X (where X varies from one to one depending on
the power output in Japan).

V is for typical 10 watt machine for no code HF operators (every HF
band except 10m and 14m and 18m), 50W for 5 WPM code operators (every
HF band except 10m and 14m) and 200W for 9 WPM> operators.

You might contact Harris Corp. (217 222-8200) and see what they have. They
built more PDM transmitters than anyone else, I would suspect.

Dates back to the very early 1960s from LA and the west coast. A bum that
used to wander around looped on ripple wine and exposing himself to women
on the street. They called him "Raincoat Charlie" because that is all he
wore besides his shoes.....He was arrested numerous times by the LA
PD, only to return to "active duty" on release. (ie: a bottle of Ripple at
25 cents and a breezy stroll down Market Street.)

Ouch, I hope that I didn't give my age away there knowing about that dude.
That is from my US Navy days on the west coast. I thought everyone knew
of that old pervert.....except you wet behind the ears spring chickens.....

Hi and thanks for reading this.. I have a Midland low-bander 70-050C
FCC ID AK581F70050C
and am curious what it is capable of. I have found that it had an E-Prom
for programming and it is currently on 47 Mhz. Is this radio
convertible to 6M?
Channel limit? Software? etc...

Any help would be greatly appreciated..

Thanks.

Jim, KB6ZOP

Source record: 174944
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

I will be going to Japan for training in May 1998. Guess what?? I will be buying the USA Version of the FT-847 from a Dealer for $1295 Not $1820 to $1899 like you guys!! Perhaps I should take orders and buy a bunch to bring back. I have no plans to pay import taxes and duties. Several stores sell the USA Version of the Radio model. These store cater to USA people like me on business.
My goal of my post was not to get into a flame war but to make all the Hams aware that we are paying MUCH more $$$ for the same thing as the Japanese. I think the British are RIPPED OFF the Most. They pay nearly double(after VAT TAX) for the same thing in Japan. FT-847 costs 168,000 Yen Street (retail) price. Convert that and you will agree with me. WHy can't the prices be more equal ???? It seems unfair and I will not tolerate it. I will take my chances with the warranty issue. Yes , there still is a warranty but I have to send the radio baacke to japan to get repaired.
73's to all even the guys who flamed me,

I do work work for Harris, but for the Electronic Systems Sector in Palm Bay,
FL; not the broadcast division in Illinois.

I realize that Harris makes broadcast equipment, but we have no communications
with them at all and do not share technology. We might as well be another
company (I guess that's the way big companies operate). We don't even design
with Harris Semiconductors and they're right across the street. They're too
expensive (they won't even give other divisions a price break).

Anyway, if anyone knows the titles of some books or papers, please let me
know. I already tried Harris and got nowhere.

Thanks, Al

4950. Re: JamTheHam: Another stupid Drew the Spew Alias.

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-27 00:00:00 UTC
From: jamtheham@aol.com
Message-ID: <1998032700315100.TAA08198@ladder01.news.aol.com>
Source record: 174987

Well, here we go again with even more words of wisdom and insight from our friend Casey:

>>Casey, you think EVERYONE who posts from AOL is Drew. I think you have a
>>severe case of "Drew envy." Better go see a shrink.

>Sorry, not everyone. Only you, simply because your posts are so
> transparent and read like a cheap novel.

Only me? How about CB Rambo, Azrael Boy, and Twins Radio? Just last week, you were accusing ALL of them of being "Drew." I really doubt that "Drew" has time to post from four screennames, don't you? Unless he's like you and doesn't have any sort of meaningful job or a life outside of amateur radio and the Internet.

>Act like a newby asking all
>sorts of stupid questions, then you start acting like the same Drew in
>about a week.

About a week? I made my first posting on here less than 24 hours ago. Not only are you delusional, you also cannot seem to tell time or dates very well.

>You don't fool me or anyone else. Besides, you act like
>someone who knows a lot about this newsgroup for someone being "new."
>The proper question for you to have asked would be ... who's Drew,?
>Why would you think I'm him? If you wouldn't act like such a moron,
>you could use your real name instead of all the names you have used.

I have been lurking here for quite some time. Haven't felt much like posting because of morons like you who belittle, accuse, and harass anyone who comes on here and states an opinion which differs from your own. But I guess that's to be expected by a regular participant on 75m such as yourself. It's all you know. Not your fault, right?

>Funny, since your new handle came on the other handles don't post
>anymore. Also, how come all your other names only post on or about the
>same time of day. Never do you post in the early morning or afternoon.
>Neither do any of the others I have accused you of being.

Unlike you, I have a real job and don't have time to play on the computer all day. Most productive members of American society do indeed go to work in the morning and come home at night. That's why they do their posting in the evening hours. That's how things work in the real world, Casey. Look into it.

>You're a
>detectives dream because you don't cover your tracks well at all. It's
>rather fun to prove that you're the liar we all know you are. Knock

>yourself out Drew, you only prove the obvious. Your problem is that
>you post anonymously proving you have no guts and no convictions. No
>call, no balls. Flame on cockroach.

If you're such a great detective, why aren't you doing it for a living instead of the menial, dead-end job you have in Georgia? And you still haven't answered my question: what's with the big case of "Drew envy" that causes you to spend hours online, writing lengthy posts about him and his alleged activities?

No. You don't get on 75 because you don't have the power to play with the big dogs and you're tired of being embarrassed and run off the frequency. I know. I listened. As for your statement above, it makes no sense. If I were a "jammer" as you state, why would my license class make any difference as to whether or not I could get on 75. Oh yeah: I want to jam and create illegal interference, but wait, my license says I don't have privileges there, so I guess I better not key the mike. Uh huh. Sure makes sense to me.

Actually, a pretty quiet night in "the jungle." Far less than the usual number of belches, farts, and profanity. The evening was marked, however, by someone continually attempting to jam via Morse code for several hours. Jammer was unsuccessful at my location, however, as I could hear all parties to the conversation through his "dits" and "dahs."

You still don't get it, do you, Drew. The vast majority of us do not care about what is discussed on those frequencies. We are having fun elsewhere.

If you want to hang out with the perverts on those "special" channels, feel free to do so. If you have a license, get on the air and ask them who Raincoat Charlie is. If you don't have a license for that frequency, write down some call signs, look up the operators in the data base, call directory assistance, dial the phone number she give you, and ASK THEM!

Sheesh! Can't you figure out a few things by yourself? Why must we spell things out for you, step-by-step?

What a short memory you have, Dad. I've been on your case for over six months--ever since you started spouting off on rec.radio.cb that the FCC is inactive and that CBers were taking over 10 Meters and nobody could do anything about it.

You have been beat down on every single, hair-brained thread you have started. You've been forced to change your screen name constantly in order to bypass kill filters. And every time you do, you are detected immediately.

Your motto is, "Ready, Fire, Aim!"

Your life could be so much better, Old Guy. Stop listening to negative people. Look for the winners in life and hang out with them. Cultivate a life beyond the keyboard and scanner. And READ! At a minimum, get one of the national news weeklies and go cover to cover to expand your horizons. Get interested in other people (and you will suddenly find them interested in You!).

Or, don't take any of these suggestions. But remember, if you keep doing the same things in the same way, you will get the same results. And life will pass you by while you sit in that apartment, all alone. That would be sad.

That's stupid, Drew. Many of us have multiple screen names. I work 55 to 60 hours a week, and I have four. Two for business, two for hobbies.

We notice that you now are using only one screen name at a time. Rambo, Twins, and the others are getting a "rest". Good move on your part. When you were "arguing" with yourself between the multiple screen names, you were getting tripped up. You seem to have found your comfort level--to use only one screen name at a time.

And with that said, I'm moving on to other topics. You are happy only when You are the subject of a discussion. So we are doomed to see you show up over and over with a new screen name, starting some weird thread, in order to get your name on the newsgroup and so you can be at the center of attention.

But that doesn't mean we have to play your game. Bye!

Yrac

> for the E, A, and possibly some G & T classes. if you dont find the call
> you are looking for in their list, look up the call in their database to see
> if it is held by another ham.
>
The only possible snafu is that the QRZ list of "available" calls does
NOT reflect the 2 year "ageing" status of the calls. It simply reflects
1x2 and 2x1 calls that are unassigned, but these calls may not be purged
from the database. Just because a call is unassigned doesn't mean it is
available, the FCC normally waits 2 years after a call becomes unassigned,
either through expiration, cancellation, or the former holder gave up
the call by requesting a new one. Verifying the ageing status on a
call is not so simple, the FCC has no mechanism for making that public.
If you have an obsolete hamcall CD that is at least 2 years old and the
call you want doesn't show up there, there is a good chance that the
call has been purged and is now available. The other way is to call
Gettysburg and they can tell you if the call you want is available, but
from what I hear, they're not inclined to walk through a long laundry
list of possible calls during any one telephone session. So doing a
little research on the call you want is quite worthwhile before making
a submission on it.

4985. FS: RARE Hard to find 14 volt Grain of Wheat Bulbs

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-27 00:00:00 UTC
From: tje@usol.com
Message-ID: <351b9622.1607479@news.usol.com>

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. I found these at Dayton one year and bought up all
the guy had. Lot of 10 grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

At this time the only discontinued radios they have is the HTX-404 and the HTX-212. They have lowered the permanent price on the HTX-202 to $199.99 and the HTX-242 to $249.99. These moves were made to either get rid of the radios or to just become more price competitive, most likely the later. After all the 202 is the "Most popular selling 2 meter HT in the World." As far as the "larger store" concept, they are deemed an "outlet store." Usually these stores are situated in metropolitan areas. Call your local store and ask them where the "local" outlet store is.

would like to trade an HTX-212 in excellant condition still under the 5 year warrenty with all the manuals, box and original equipment with it for a Ranger RCI-2950 straight acroos. the 2950 must also be in good to excellant shape. if it has the conversion already done thats fine. Please E-mail back and let me know. I am a non-smoker and this radio has no scratches on it and is currently mobile.. has been working fine even in the cold mornings.

Thanks for your time

This makes sense, especially on the 202. I don't know anyone who bought this except when it was (nearly always) "on sale" for $189-199. Did anyone actually pay $259 for a 202?

Amazing how many don't understand this. When you write something they disagree
with, the first thing they do is ask for your callsign and/or class of license.
License? We don't need to show you any steeeeeenkin' license. Deal with it.

Speaking of Drew/Jam/Rambo/Twins, it was said:

>. You are happy only when You
>are the subject of a discussions......So you can be at the center of attention.....etc.

K5PF observes:

In an ancient Indonesian temple, parables are carved into the stone walls. One tells the story of a turtle who flies high over the land with his mouth clamped onto a stick carried by two geese.

The people below point and say, "Look at those clever geese." Finally, it is too much for the turtle. He yells, "No! Not the geese! This was MY idea."

And in opening his mouth to speak, the turtle falls to his death.

It is an analog set because it processes the signal with all analog circuitry.
A modern design digitizes the signal as close to the front end as possible
and does all signal filtering and demodulation in software.

>tunes. I seem to recall radio products that you attach to your antenna that
>convert from higher to lower frequencies or vise versa. Or is there some
>other simple way in which I can modify my receiver?

Sure. What you need is called a converter. This is just a fixed frequency
oscillator and mixer which translates one frequency range to another.
In your case, you want to translate the 118 MHz to 130 MHz range to
18 MHz to 30 MHz. To do that, you need a 100 MHz crystal oscillator
and a broadband VHF mixer (a MiniCircuits SBL-1 will do nicely).

You can totally homebrew this converter if you like, or you can buy a
kit from Hamtronics, or you can buy an assembled and tested converter
from a number of vendors. They get about $70 to $100 for one, though,
and you can build one for about $25.

Alternatively, nearly any scanner will cover this range directly, and isn't
much more expensive than an assembled converter. It'll do a lot more
than just receive aircraft too.

But you prefer to stick your head in the sand and ignore it. That won't make it go away. All it takes for evil to prevail is for good men to stand idly by. Many of us know who these jammers are, the FCC certainly does. But they don't act because most of us passively accept this behavior. That establishes a "community standard" which permits it to continue.

For that to change, the community will have to voice its displeasure loudly and frequently to the FCC, in letters to the editor to amateur magazines, in public forums, and if necessary to their congressmen, until the pressure becomes so overwhelming that the FCC is forced to act.

Shooting the messenger won't solve the problem. The message must go out loud and clear that jamming of any sort by amateurs won't be tolerated.

They won't be able to take back allocations because of a select few jerks.
A handful of idiots is all we have to contend with at the moment. They stay on
only a couple of frequencies. Since the FCC doesn't seem to give a damn what
do you expect us to do about it? By the way, there has been some success in
ridding taxis off the lower half of 10m in the NYC area.

>average fine of $6,000, loss of equipment, and a sentence of not buying/using
>radio transmitters (except work related) for life, what is the basis of your
>remarks above?

Probably the fact that the jamming has continued for *years*, and mostly
by the same (known) people, yet the FCC has *NOT* taken action of any
substantial nature against them. They're still there, still jamming. If the
FCC actually had a strong track record of doing what you say, these
people would have been off the air long ago. But they aren't.

>In view of the fact that the ARRL is composed of Amateurs, led by Amateurs, and
>has no agenda other than promoting Amateur Radio, what is the basis of your
>remark that "they don't want to mess with it eather[either]"?

Note with interest that the only ARRL Director to speak out forcefully against
the jammers has recently resigned. The OO program and the ARRL's AA have
been of nil effect, and ARRL lobbying of the FCC to do their job has been (apparently)
rather weak. QST has been notably silent in condemning these activities while
being rather strident on other issues of less importance to our service (such as
medical waivers).

>In view of the fact that there are thousands of frequencies where no jamming
>occurs, and where Amateurs routinely enjoy two-way conversations, what is the
>basis for your remark that "deliberate jamming has been going on ALL OVER the
>ham bands"?

Well, one signal may occupy 3,000 of those frequencies, and together the jammers
tie up as much as 15% of the frequencies available on 75m at any given time. The
situation isn't quite as bad on the other bands, but you can find jamming occuring
on every one of them on a daily basis.

>Are you seeing a pattern, OM? You are guilty of taking isolated incidents and
>twisting them to sound like the world of Amateur radio is crashing down. This
>is the "Chicken Little" syndrom. "The sky is falling!"

The incidence of jamming is not isolated. It is continuing, persistent, and spreading. Sticking your head in the sand won't make it go away.

>Amateur radio is alive and well. The majority of hams take pride in their
>operating, purity of signals, and adherence to the Rules and Regulations. Your
>trash-talking about our hobby is not appreciated, nor is it accurate.

All that is required for evil to prevail is for good men to do nothing. Your head in the sand attitude passively encourages the jammers. By not forcefully protesting, you make their behavior an accepted "community standard".
Jamming by amateurs should never be tolerated. It is completely unacceptable behavior. It should be protested in every legally available forum.

Jim Martin of Lowell, Massachusetts should get back on his medication. He clearly is not sane from his comments. I can't understand why he is still employed at HRO in Salem New Hampshire with such a poor attitude. I think I will forward his posts to Bob Farraro who is President of
the Ham Radio Outlet Chain.
Yes, Jim I work for a Japanese Manufacturer as a Field Rep. I used to travel to the Orient more
often in the past (not Japan but HK). I haven't been out of the USA for three years but now the
opportunity has come for a two week seminar on a new product. I plan to go to the Japanese Ham stores with
another Field Rep (a ham also) from San Diago,CA.
Jim is just pissed because he knows I am correct about the Web Sites of the Japanese Ham stores with the FT-847 at just 168,000 Yen street price or $1295 USA. I would like to buy from Dealers
in the USA but at $500 more per radio I would have to be as insane as Jim Martin.

I nodded off last night while reading Barker's THE ELEMENTS OF LOGIC.
I'm certain others in this forum nodded off while reading, too. You ought
to try it, Drew. You'll gain much more by reading during the late-night
hours, than being a SWL monitoring the 75m garbage freq'y. Or, since your
tech+ license hasn't been revoked yet, why not get on 80m CW during the
late-evening hours? Then you can report back to us regarding the pleasant
QSOs you've encountered.

Jeff KH2PZ

P.S. Since you're such a spelling fanatic, I thought you'd like to
know that "kilo" is abbreviated with a lower-case k.

>sentence correctly.
>
>

No-Question now, its " RAMBUTT" with a new Name. By the way Rambutt how did
you pick a name like RAMBUUT anyway? And why do you keeping changing your
Screen Name, our you really lonely for Attention and you figure this is the
only way you can get it?Or our you just embarassed every time you post here and
Make an ASS out of yourself, and figure if you come back with a new Name no
will know its you?

>I would like to know how long usually takes for ICOM Repair.
>(IC-706 ?)

of course, that would depend on what was actually wrong with your radio...but my experience with ICOM service has been very good. In hte heavy season, it took less than 4 weeks. When things are not so busy, I have seen a 7 day turnaround. But again, that depends on what's wrong with your radio and what their load is like.

>Last I knew AOL let you have up to four or five screen names at one time.
>After you reached that limit you could delete an old one and pick a new one
>but you could never re-use the old one.

In truth, if you reactivate your old screen name before the 6 month resting period has expired, you may resume using it. After 6 months, its a crap shoot, but if it hasn't been either retired, deleted from the mainframe, you may still be able to reactivate an old, or deleted name but only under your original account.

: ...
: d.No amateur operator shall willfully or maliciously
: interfere with or cause interference to any radio
: communication or signal. "
:
: Note that there is no reference to "legal" or "illegal"

By "signal", does the FCC include such "signals" as the loud static crashes from thunderstorms, or the splatter from someone's rig with too-hot mic gain and/or speech processor, or the extremely strong second harmonic from Radio Havana Cuba that sometimes shows up on 10 meters, or the broadbanded RF hash that transmits from my antique IBM XT?

I suspect not. Worldwide, 28 mhz is an amateur-only band. IMO, the echoey, roger-beeping unID stations on the lower end of 10 meters have the same legal status as QRN or QRM.

Up until about 5 minutes ago, Polly was having a decent QSO. But along comes the JAMMER, playing a continuous loop tape of what sounds like carnival music. Sort of a calliope on the wrong speed. No wait, now it's been changed to bluegrass music. It's only 8:34PM EST, so the night's fun has just begun!

Peter is right. So actually, we may rotate a virtually unlimited number of screennames on our account. Ain't AOL great?

Hello Gentlemen
I have been reading this group for over a year and have
come to the conclusion that most of you are not true Amateur
Radio enthusiasts. The remarks are rude and uncalled-for and
should not receive a reply. It would be nice if this group would
get together as real enthusiasts of this very interesting hobby and
not reply to the nuts. Why not have discussions without the name
calling, something of interest to all of us. Intelligent discussions
would be nice and ignore the unintelligent....

I have been thinking about building a DSP radio. It could be built with five chips. The hard part would be the programming. I still am not as good as like at DSP programming. But that is the way the world is going. It software that is the future. Even in the EE programs, hardware is almost a thing of the past (except for chip design).

Hello All,

I seen somewhere that someone (sight on net) had the Kit to put the TT OmniD on 17 meter? Anyone know where this sight is or any place to get the kit to put this nice old rig on 17?

Any more know mods for it?

Thanks & 73

Todd Little said:
" 5 WPM is either no-code or know-code, and if it's the latter, why
wouldn't 1 WPM or 1 WPD be sufficient? What's clear is that
you can't have it both ways."
This is why some of us pro coders are against changing the code
requirement. It seems some people don't want to compromise,
it's all or nothing with them.

This sounds "a little too wide band" to be caused by the power
company and it seems that although a bad transformer could cause this,
I find it hard to believe that Cocoa Beach has so many bad
transformers. Does the noise get a lot worse when you approach a power
substation? Is it the 'same kind of noise' all the way accross the
band?
Here is a high tech idea: Could you record the noise on your PC (if
you have a sound card) and post the .wav file here?
Sometimes a sound bite is worth a thousand words. Hopefuly someone
from the area relevant to Amateur Radio and the Power Compay will read
this and shed some more light. (No pun intended)

>Peter is right. So actually, we may rotate a virtually unlimited number of
>screennames on our account. Ain't AOL great?

Somehow, I find Drew agreeing with me less comforting than I would have hoped.

If I may invoke the venerated name of J.D. Clampett here, without striking too resonant a chord with our dedicated colleague:

"Don't help me, boy. "

And personally, as a broadcaster, I find Drew's behaviour, here, an embarrassment to a profession, that like a number of others today, is quite capable of ongoing embarrassment without his help.

97.113(d) was specifically crafted for W1AW, but it doesn't permit
broadcasting to the general public. 97.111(b)(6) allows dissemination
of information bulletins. Those are defined in 97.3(a)(24) as "A message
directed ONLY TO AMATEUR OPERATORS consisting solely of subject
matter of direct interest to the amateur service." [emphasis added]
Transmissions to the general public are forbidden by 97.113(b).

No, Morse Code practice broadcasts are a specific exception granted
in the rules, 97.111(b)(5). Morse Code practice is assumed to be of
no interest to anyone except amateurs or those aspiring to become
amateurs. Thus it is exempt from the general prohibition against
broadcasting to the unlicensed public.

>everybody else" society.

Yes, and that's exactly why we should care about such violations. They promote a lawless approach to amateur radio. If we are willing to condone jamming in one case, we are compelled to condone it in the other. If we condone using AM voice in a non-voice segment to broadcast to the unlicensed public in one case, we are compelled to condone that behavior in other cases. The rules must be obeyed consistently, or they will be ignored consistently. This is recognized formally in the equal protection clause of the constitution, and informally in the psychological principles of consensual governance.

Amateur radio has historically been self-policing in the sense that each of us polices *ourselves* in our behavior on the air. When that breaks down, only extrernal threat of force will maintain order. Condoning vigilante action breaks down that concept of self-policing. And since the FCC refuses to apply external force, without that self-policing we will become an unruly mob. The enemy is not external, the enemy is within ourselves. If we allow it to run unchecked, it will destroy us.

That's true, but it is not an accepted practice to broadcast to QRN, nor is it considered good practice to follow QRN around the band in an attempt to jam it. It is accepted practice to ignore QRN and attempt to carry on as if it were not there. So we are free to ignore such stations and carry on as if they were not there. But we cross the line when we attempt to communicate with them or deliberately attempt to jam them. Deliberate jamming is never an acceptable practice for amateurs. It is not within our charter.

The chipset manufacturers offer applications books for their chipsets with example programming. My first cut at my DSP receiver simply used code lifted whole cloth from the Analog Devices application handbook. As you study the code examples, you can learn how to efficiently code your own algorithms, but you don't need to be able to do that to get started. There's also a good collection of sample code on the TAPR website, and comp.dsp is a goldmine of DSP programming tips and techniques. Don't be afraid to jump right in, you can have working code in very short order.

I'd suggest starting with one of the evaluation modules. It makes it easy to download and debug your code without worrying about hardware bugs. After you have code you like, you can commit it to eprom in your own hardware design if you want to minimize board real estate and cost, or the evaluation module can simply be built into your finished project.

But pay close attention to the lament that little poor code is heard on the bands. That means few new people are taking it up since no one is a hotshot in the beginning. As the editorial says, there are enough OTs to keep Morse activity up for the next couple of decades, but who takes their place after that? In general, few of those licensed in the last decade (some 40% of all amateurs) are adopting Morse Code as a regular part of their operating. This is an example of the HF demographic crisis which I keep pointing out is looming in our future.

LW frequencies from which other amateurs had been excluded
in previous years. However those were withdrawn less than a
decade later, mooting that advantage.

>Examiners were overwhelmed with hams wanting to upgrade to this
>new ticket, due to the incentive created by offering new and
>exclusive frequencies.

But it is instructive to note that post-68 examiners have *not*
been overwhelmed with hams wanting to upgrade to the current
Extra class, even though it too gives exclusive access to some
spectrum (and again that is spectrum previously held by other
amateurs but withdrawn from their use arbitrarily). In fact
demand for Extra class has been distinctly underwhelming in
the 30 years it has existed in its current form. Only very recently
has Extra surpassed the dwindling Novice class to escape
the distinction of being amateur radio's smallest class.

| assemble in your kitchen for a couple of bucks.
+---------------

Indeed! And one of the nastiest of the problems is that the local oscillator and/or mixer section (if not constructed *very* carefully) may radiate the local oscillator frequency outside said kitchen into somebody *else's* receiver, thus interfering with *their* reception (something neither the FCC nor the FAA would take kindly to).

-Rob

p.s. Cheap pocket F.M. radios have local oscillators that, when the radio is tuned near the top of the F.M. band, can radiate smack dab in the middle of the aviation band, and in fact, perhaps right on the frequency of the ILS your plane is following! So when the flight attendant says, "We're starting our initial approach... all electronic equipment must be turned off"... please, do turn it all off.

>want to mess with it eather. So what do we do?

The first thing we do is quit putting out internet postings which contain errors and inflamatory content.

In view of the FCC's track record in hauling jammers into court (with an average fine of $6,000, loss of equipment, and a sentence of not buying/using radio transmitters (except work related) for life, what is the basis of your remarks above?

In view of the fact that the ARRL is composed of Amateurs, led by Amateurs, and has no agenda other than promoting Amateur Radio, what is the basis of your remark that "they don't want to mess with it eather[either]"?

In view of the fact that there are thousands of frequencies where no jamming occurs, and where Amateurs routinely enjoy two-way conversations, what is the basis for your remark that "deliberate jamming has been going on ALL OVER the ham bands"?

Are you seeing a pattern, OM? You are guilty of taking isolated incidents and twisting them to sound like the world of Amateur radio is crashing down. This is the "Chicken Little" syndrom. "The sky is falling!"

Amateur radio is alive and well. The majority of hams take pride in their operating, purity of signals, and adherence to the Rules and Regulations. Your trash-talking about our hobby is not appreciated, nor is it accurate.

Perhaps those that hang on the freqs are sitting to close to the exposed
tank circuits on their 3KW amplifiers and it has fried their brains out to
the point that they are having flashbacks. Who knows, from some of the
language that I have heard there perhaps one of them was in deed old
Charlie hisself....I stear clear of those areas of ham radio though as I
have better things to do with my rig than to listen to that crap.

5071. Jamming With Tape Loops on 3901Khz

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-28 00:00:00 UTC
From: jamtheham@aol.com
Message-ID: <1998032813075401.IAA21202@ladder01.news.aol.com>
Source record: 174843

I nodded off last night to the sound of what appeared to be endless tape loops being played on 3901. Not one, but TWO stations in unison, playing a tape or digital recording of a male voice saying "Show-ennn-bohmmmm con-vikkkktedddddd-felonnnnnn." This went on for hours. One station would unkey and immediately, a second, weaker station would play the exact same recording. Hey, whatever works! Anything's fair game on 75, it seems.

I suppose you backed the 'Buy American' effort when Detroit was making the crappiest cars in history back in the 70's. Everything evolves, maybe an American will get off is respective backside and make a better and competitive unit.

5074. Radio Card from Peoples Temple

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-28 00:00:00 UTC
From: jtinkerton@hotmail.com
Message-ID: <6fj2ht$57j$1@nnrp1.dejanews.com>
Source record: 174846
Cross-posted to: alt.marketplace.collectables,rec.collecting.cards.non-sports,alt.marketplace.collectables,rec.radio.amateur.misc

When I was in my early teens I contacted, via Amateur Radio, the ill-fated "Peoples Temple" in Jonestown, Guyana (ala' Jim Jones and cyanide-laden Grape Kool-Aid).

As a result of my brief radio contact with these folks, I exchanged "QSL Cards." I thought I has actually lost the card from Peoples Temple, but I recently found my card from WB6MID/8R3 of Jonestown. It contains a brief personal message from "Al and Wes". It turns out the "Al" (Albert Touchette) was part of the ambush team that killed Congressman Ryan from California as he was leaving from the airport.

Ironically, they attacked the congressman and drank their strange brew just a few weeks after I received the card.

In any event, I'm sure others have such cards -- but I wonder if they are accorded any value. I plan to keep mine, but do you suppose market value could be assessed? $100-$500? Just curious what others think.

Cheers,

-Jay Tinker

Hello Gentlemen
I have been reading this group for over a year and have
come to the conclusion that most of you are not true Amateur
Radio enthusiasts. The remarks are rude and uncalled-for and
should not receive a reply. It would be nice if this group would
get together as real enthusiasts of this very interesting hobby and
not reply to the nuts. Why not have discussions without the name
calling, something of interest to all of us. Intelligent discussions
would be nice and ignore the unintelligent....

After last weekend's flame wars, I was ready to give up on this newsgroup as a source of useful information, conversation, and discussion. But I decided to log on today and give it one more chance. I'm sorry to say that I'm deeply disappointed. Can't we have a forum for discussion of our hobby that doesn't revolve around personal insults, bad-mouthing of other individuals, and threats of lawsuits? I guess we can't. I tried on several occasions to provoke intelligent discussion of amateur radio issues. I begged and pleaded that the agitators would take their arguments to private e-mail, I asked repeatedly that we might bring this newsgroup back to it's original purpose. But I can see that it's not going to happen in my lifetime. I even received inflammatory e-mails from some of the posters in question. Truly a sad day for our hobby. And it's not just on here, either. I don't care much for Drew (or whoever he is in real life) and his methods, but the message he delivers cannot be ignored. Our hobby is in serious trouble. The daily chaos on 20 and 75 meters, the illegal ops on the low end of 10 meters, the attempts by the LEOs and other commerical interests to take over our VHF and UHF spectrum. And now, we air our dirty laundry for all to see worldwide on the Internet. Unless things reverse course very shortly, it's over for us. As for this newsgroup, I've done what I can, but I concede I haven't been effective. Sorry. I tried. I've had enough. I'm outta here. For the small minority of you who have been helpful and who do truly love amateur radio as I do, God bless. Hope to catch you on-the-air one of these days. 7/3s.

5092. Falcone Resigns

Does anyone know the story here?

The ARRL Letter Online

Volume 17, Number 13 (March 27, 1998)

GREAT LAKES DIRECTOR RESIGNS

ARRL Great Lakes Division Director Joe Falcone, N8TI, has resigned, effective
March 23. He offered no reason for his unexpected decision to step down.

An attorney from Livonia, Michigan, Falcone became a director January 1, 1998, after
defeating incumbent Director George Race, WB8BGY, in balloting last November.
Falcone was a member of the ARRL's Enforcement Task Force.

Great Lakes Vice Director Dave Coons, WT:W, automatically has succeeded to the
office of Director, creating a vacancy in the Vice Director's position.

Request for HELP!!
My fellow HAM's, I have a friend that runs a children's home for the state of Ca, Child Protective Services. Its' temp housing for pre teens that are in hiding due to physical & sexual abuse. These people are in dire need of a P.C. They need a system for records and school studies for the children. This is an out of pocket expense for these folks that can't afford a system due to Medical bills for an adopted child.
My request is a donation of computer or components That could be used to put together a system. Needed - P.C. (at least 486) , monitor, printer, ect. They will be using fax and email to communicate with the state and other agencies.
THIS DONATION IS TAX DEDUCTABLE. THEY CAN PROVIDE STATE PAPERWORK FOR INCOME TAX PURPOSES. If we can get some hardware I can provide the technical help to get the system running.
Thanks.. Duane, KF6LNJ, dalles@earthlink.net Riverside Ca

Drew, what exactly is your purpose in life? I mean, if you want to debate issues like freebanding etc. Why not just come out of the closet and lets talk about it.. It's pityful to watch you change your nic only to be discovered in a few days. Also, you seem to point out to everyone else that they need to "get a life" have you evaluated your own lately? Anon troll on the internet? Yes Drew, we should all aspire to be more like you. har har... The above "BZZZT" is a classic, your the only one on the NG who has ever used it. Additionally your the only one who feels the need to respond to EVERY post that mentions your name, of course that puts you in the same catagory as Jimmy Obrien, your keeping great company.

If your purpose is to entertain yourself by changing your nic and playing cat and mouse, I guess that's OK, as Diamond Dave says "whatever floats your boat" I guess it's as amusing to the rest of us to watch you make a fool of yourself.

Tim, ka8ddz

The daily chaos on 20 and 75 is limited to probably less than 40 individuals who perpetuate the situation, are you telling me that this VERY select group will be the demise of our hobby? Thats laughable, is it the foul language or jamming? There is more than enough foul language to be found on the internet along with email bombs and the like. Pornography, etc etc.

I don't hear ANYONE ranting about how we had better change the INTERNET now or it's going away! Why do these comments seem to apply only to amateur radio?

Prof Ed Delp, N9YTE, of the Purdue EE department has presented
DSP to our club, Tippecanoe Amateur Radio Association (TARA, W9REG).

Plus his lab (he has walked the club thru it) is researching advanced digital signaling processing procedures. Ed has laid out a vision where we could have reconfigurable receivers in any mode. No need for seperate demoduators (ie packet modems) nor filters. All done inside the DSP chipset with software.

A receiver would be an RF amp chip, mixer/IF chip, DSP, AF chip and a micropressor to run things. It could be built as small as the ICOM R-10. Want CelTel coverage, program it in. The cops go to digital mode, program it! A receiver that could cover DC to daylite (the RF and IF stages are not really needed by do help).

TVs now use only three chips for everything. DSP is a part of HDTV (DTV). DSP is the main part of a CD player (plus a filter and audio chips). They are used in broadcasting audio, telephone switching systems.

Thanks Gary for the idea of using the manufacturer's data book. I did not think of sample programming to be included.

Your not too bright, I am responding to your question above and that question was
:

"Why don't you simply answer the question, thus ending the thread?"

I answered by explaining why people are not simply answering your question.
I don't know who Raincoat Charlie is, nor do I care, I just find it amazing that
you come in here with
trolls, flames, and mostly 'junk' posts and then you expect everyone to be nice
when YOU want an answer.

The Internet is only a pale reflection of amateur radio. Yes, our
problems are aired. But at least we are talking. And hams are more
familiar with federal, state and local laws/regulations than the
general population.

What we really are seeing is a true reflection of the North American
public. That is what is scary! Forget about losing our ham priviledges,
how about having a police state? Having recently come back from the
Bosnian conflict, our country acts much like Bosnia but without the
land mines.

The downside of "smaller-is-better" is the user interface. Examples: Most TV's are large due to screen, not electronics; small computers (palmtops) are limited in use due to keyboard, not electronics (My Libretto is a pentium PC and performs fine, but I wouln't write a book with its keyboard).

My 706MkII is small enough for my uses. The front panel could not get much smaller and really be usable; and then there is the power dissipation issue (unless you just want to receive).

>with its keyboard).

Yes, that's where divorcing the controls from the radio makes some
sense. Take the Icom PCR1000 for example. It doesn't matter that it
is small since the "controls" are on the PC. Or consider the Kachina
505, it is big, but again you don't care. You can tuck it in a closet
somewhere while controlling it from your PC (even dial up by modem
from a remote location).

>My 706MkII is small enough for my uses. The front panel could not get
>much smaller and really be usable; and then there is the power
>dissipation issue (unless you just want to receive).

Agreed. The control head is about as small as would be usable. The
body could be larger without any harm since it can be tucked in the
trunk or under a seat, and would allow use of a larger heatsink.

It would be neat if Kachina offered a control head for their radio
the size of the one for the IC-706. That would let it operate without
an associated PC for those who prefer that style of operating.
They have a mobile mounting kit for their radio, but you need to
operate it from a laptop. That doesn't bother me since I need
the laptop anyway for digital operating. But for those who want
to operate SSB or CW, an optional traditional control head would
be a selling point.

But back on the $500 HF radio topic, size shouldn't be the
determining factor. If it is cheaper to package the radio in
a larger box, then do it. I see it as aimed at the entry level
desktop rather than the mobile market anyway. So small
size isn't an essential component of its design. (High
density packaging is more expensive because of thermal
issues and intricate assembly labor costs.) If it were as big
as a TR-4C, that would be Ok. Though with modern
electronics there's no reason I can think of to make it
that large.

I'm picturing something in the IC-735 form factor, but
perhaps made in the tinny TenTec fashion, say like
the Argonaut 509. Sheetmetal box costs are primarily

fabrication cost, so size is irrelevant within a fairly wide range as long as the number of bends needed is the same. Now if it is diecast, or heaven forbid, injection molded plastic, then costs are driven by size. I hope it is in a good metal box for shielding, however.

(Diecasting or injection molding is cheapest, if done in high enough volumes to recover the high initial tooling costs, but few amateur radios are sold in large enough volume to reach that point. So tin box construction is the lowest cost packaging for amateur equipment. MFJ and TenTec have been the prime examples of that. The Japanese seem to be willing to eat the higher tooling costs to deliver a product with a more polished appearance. That's marketing driven and not production cost driven.)

Yep, that's practical to do now. I can reconfigure my receiver by just
downloading different software into it.

>A receiver would be an RF amp chip, mixer/IF chip, DSP, AF chip and

You've forgotten the LO. You need a wide range LO for an upconverting
design. Today, the best candidate for that is a DDS with a clean up PLL.
That'll likely all be in one chip in a year, but for now you need two or three.
You can do aliasing downconversion instead, but the variable sampling
clock makes the programming more complex. And you need *good*
preselector filtering. The latter is "iron", and that's expensive. It is better
to upconvert and use a fixed roofing filter instead. (My receiver isn't that
polished. It uses a VXO. But that wouldn't do for general purpose amateur
and SWL use.)

>TVs now use only three chips for everything. DSP is a part of HDTV

Not the *data* book. The applications examples are in the applications
book(s), in the case of Analog Devices there are two volumes. That's
one of two reasons I chose the AD parts. The other is that I like the
assembly language. It is more intuitive than that for the TI or Motorola
parts, so the learning curve is not so steep. But good cheap optimizing
C++ compilers are becoming available for the latter, so that advantage
may be mooted.

While I haven't had to use ICOM America's , I have used ICOM Canada to repair an old IC-211 all mode rig. The price was, I felt, reasonable, and it seemed to come back in a reasonable time, though I wasn't counting the days.

Hope you get yours back soon!

73, Bob, VE7HS

Thanks, Gary. This is what I suspected. I don't have a loop for now; just a longwire. Wonder which was which. One was quite a bit stronger than the other. Interestingly enough, they appeared to both be playing the exact same recording. A digital sound file sent between them via the Internet, perhaps?

Hello gentlemen,

I built a piezo gyro for a R/C helicopter and it interferes with the receiver (PCM ,40 Mhz).The processor of the gyro is a "Motorola HC-11" running at 16 Mhz.I managed to stop the air-radiation completely by shielding the gyro (aluminum foils grounded to the "-" of the battery).But i can't stop the interference going through the leads (the gyro is connected to the receiver: + and - leads ;and the "info" lead).I tried chokes and toroids but they didn't help...I'm a little bit lost now :-(What should i try next ? **Plenty** of suggestions will be welcome ;-)

Thanks in advance,

Regards

Guillaume Hastoy

P.S.: changing the quartz of the receiver or of the gyro's processor didn't help...

That depends on whether or not actual "abuse" has occured, as determined by
AOL. Speaking for myself, I have not engaged in any such "abuse." You can send
all the mail you want; if no "abuse" has occured as per AOL's guidelines, they
will simply laugh at you and e-mail you back a nice form letter that basically
says "go away and don't waste our time."

Sorry, Casey. You strike out again. SEEK HELP! SEEK HELP!

I think using 6 handles in a month with the express intention of
causing problems for a newsgroup is abuse. I have received 7 e-mail
messages from members of this group who say they have written to
abuse@aol.com with complaints. Several of the former trouble makers on
here were members of AOL until they were kicked off for the same thing
you do. Laugh now, cry later when you have to sign on another ISP.

> I've had enough. I'm outta here.

Sorry you feel compelled to quit the NG. The hobby is not in as much trouble as some would have us believe. It's just the vocal minority that makes it appear thus.

Anything worth having is worth fighting for. I intend to stay around to combat the mis-information that the trolls throw out. I intend to keep fighting the illegal ops on 10 meters. I intend to remain part of the ARRL--even if I don't agree with everything they propose. (It's the ONE BIG thing that sets us apart from the CBers. We have a national voice in WashDC).

The message Drew delivers is just plain WRONG. He "majors" in "minors" for the sole purpose of stirring up discussions where he feels comfortable. (He can't make it in regular society--he has nothing to say.) The best thing we could do is to resist the temptation to respond to his posts. They mean nothing to anybody; why waste time answering? Just let him have the last word and move on to more meaningful topics.

>in the sand attitude passively encourages the jammers.

Mr. Coffman:
If you have read previous posts, you will know my head is not in the sand. However, I don't fight jammers by posting to the internet. There are things more effective; i.e., identifying them and getting action taken.

I stand by my original post concerning the FCC's track record during the past three years in defending the Amateur bands. These court cases did not come about as a result of internet postings. It has taken the work of Amateur volunteers, plus some calls to friendly Congressmen, to get this done. It is very time consuming, and is not for the faint of heart.

For the record, in no way do I construe the actions of jammers as an acceptable community standard.

>using 6 handles in a month

Perfectly legal under AOL's rules. By deleting old screennames and then creating new ones, you can "rotate" a virtually unlimited number of screennames, or "handles" as you refer to them. This is as the system is designed.

>with the express intention of causing problems for a newsgroup

Your opinion. And you better be careful here. Remember, it was YOU who began to direct posts towards me and began hurling personal insults. I merely posted information on the happenings of the 20 and 75 meter amateur radio bands. Perfectly within the charter for an amateur radio newsgroup. I made no inflammatory, profane, indecent, obscene, libelous, or defamatory remarks towards any individual. In addition, I made no comments of a personal nature nor directed my remarks towards any individual or individuals. This is exactly what I will tell AOL if your actions cause my behavior to become an issue. You, on the other hand, have repeatedly made statements of a personal, insulting, and derogatory nature. Are you sure you wish to continue this little campaign to purge me from this newsgroup?

>I have received 7 e-mail
>messages from members of this group who say they have written to
>abuse@aol.com with complaints.

I don't care if you have received 7,000. Mere volume of mailings means nothing. If anything, mass mailings tend to make the powers-that-be at AOL think the named party may be the target of a smear campaign, rather than guilty of bonafide abuse. Such is the case here.

> Several of the former trouble makers on
>here were members of AOL until they were kicked off for the same thing

Can we modify this quote, only minorly, and still have your agreement, Gary?

"The incidence of *BOOTLEG OPERATORS* is not isolated. It is continuing, persistant, and spreading. Sticking your head in the sand won't make it go away."

Today, while enjoying good conditions on most of the upper bands, I found the whole regular hoard of illegals on the lower 300kc of ten meters, unidentified 'phone on 12m, complete with "roger beep," and business communication, in English, at 10.106MHz.

I'm sure that later I'll hear the same scofflaws down near the bottom of 40m, and who can even begin to sort out the various unidentified stations in the lower 200kc of 80m.

There is, in my estimation, a very real danger of losing the bottom of 10 meters to bootleg stations during the comming up-swing in solar conditions. The possibility will only be greater if we sit back and do nothing! We need more operators on 10m, NOW. And these ops. need to choose the frequencies upon which they operate in such a way as to have the maximum negative impact on the activities of bootleggers. This is a great place to park a packet gateway, to experiment with AMTOR, or to use for RTTY contacts. Make no mistake, there is a light in the tower of the old North Church.

Lots of participants as you would imagine. Good discussions about Bill Clinton and his alleged criminal activities. But as you would imagine, the jammers almost outnumber the Liberty Netters. Let's see: we have one playing a tape loop of military marching music, one making animal noises, one calling everyone a "faggot" and stating that "you faggots aren't going to run anyone off of here", plus the usual background chorus of burping, farting, and other strange noises. Ham radio at it's finest once again!

5144. Don't Buy Magnavox Junk

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-29 00:00:00 UTC
From: Pam <Pam1265@aol.com>
Message-ID: <6fkr4u$stb@bgtnsc03.worldnet.att.net>
Source record: 174734

A while back I bought a Magnavox/Phillips VCR and after I had been using it (with very light usage) six months, it started first eating tapes and then wouldn't stay turned on (shut down after a few seconds of being turned on). The problem (apparently) was an infrared diode (D205) that burns out or doesn't provide enough light output. From what I've heard, this is a common problem with Magnavox/Phillips VCRs that are now being made by Funai. So, if you don't want a VCR that only last 6 months before needing repairs, don't buy Magnavox.

Pam

And so the world didn't end in Apocalypse as some of those defending the current status quo would have it if we were to return to a less classist licensing system. In fact, as Art notes, that era was something of a golden age of amateur radio, with the highest percentage growth statistics of the post WWI period. (Note I not II.) If amateur radio was a "high tech" activity then, it was certainly more "high tech" prior to WWII, yet that period, which was also burdened with a class heavy system based on Morse speed, didn't see anything like the same percentage growth. The evidence of history shows that a flatter license class system is healthier for amateur radio.

Hi All,

I'm looking for a product called RadioRest or Radio Rest or something similar...

It's was a nice (very nice) holder/support for hand held 2mtr gear, portable scanners, etc. I saw them at a swap meet, didn't buy it at the time, and now I can't find them anywhere - the story of my life :)))

I believe it's called RadioRest. Can anyone help me out?

I just a new hand held trunk tracker and want to show it off in style :)

Thanks for any assistance.

Bill

You seem like a nice fellow so I will bend a nice holder for you out of coat hangers and will only charge you a small fashioning and handling fee of $39.95. Ok?

I was waiting for Jeff from Hawaii to weigh in on this. Knew it wouldn't take too long:

>JamTheHam <jamtheham@aol.com> wrote:
>>I nodded off last night to the sound of what appeared to be endless tape
>>loops being played on 3901.

>I nodded off last night while reading Barker's THE ELEMENTS OF LOGIC.
>I'm certain others in this forum nodded off while reading, too. You ought
>to try it, Drew. You'll gain much more by reading during the late-night
>hours, than being a SWL monitoring the 75m garbage freq'y.

Translation: put your head in the sand. Don't listen. Ignore the problem and pretend it doesn't exist. Whatever you do, don't tell others about it. It's embarassing to us. We prefer the "hear no evil" approach.

> Or, since your
>tech+ license hasn't been revoked yet, why not get on 80m CW during the
>late-evening hours? Then you can report back to us regarding the pleasant
>QSOs you've encountered.

Here we go with the personal attacks. Why would a license have been revoked, or have not been revoked "yet?" The only grounds for license revocation is illegal operation. This is trypical of Jeff: assumes that anyone whom he disagrees with is guilty of engaging in illegal activities. I've seen him use this tactic with others on several occasions.

I am going to ask the local US Attorney that if we hams were
to gather evidence, would there be prosection. I am also
going to contact my local congressman, Rep. Pease plus Rep
Billy Tuzain's (sp?) office.

I would suggest that others might do the same. If congressmen
aroung the country hear of the issue, especially in an election
year, we might get some relief. We might also think of writing
letters to newspapers like the Washington Post, Wallstreet
Journal, and USA Today.

5156. Work the Sats! For Sale: L.L. Grace DSP-12 " Satellite" TNC

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-29 00:00:00 UTC
From: Dale Yost <dyost@marketing-support.com>
Message-ID: <351E7299.745A@marketing-support.com>
Source record: 174746

Hi,

FOR SALE: This is the "ultimate" TNC. Hook this up to your rig (even a handie-talkie!) and your IBM-compatible computer and you can easily connect to your favorite local land-based packet radio stations. But this TNC can also let you do a whole lot more--including experiencing the thrill of communicating with any of the many amateur radio satellites, certain (ham operator on-board) Space Shuttle Missions, even Russia's MIR space station!

The DSP-12 replaces the traditional analog modems of cheap TNCs with a Digital Signal Processor (DSP) CPU! It's fully programmable. Handles the specialized packet protocols of WEFAX, RTTY, ACARS, plus the OSCAR (Orbiting Satellites Carrying Amateur Radio) satellites. Works with HF Packet, RTTY, and ASCII; VHF/UHF packet; plus the capabilities you need to work the satellites: 400-bps PSK, 1200-bps PSK, 9600-bps direct FSK--plus six PSK speeds from 75-1200-bps. And since it has a computer CPU, it can be programmed with software upgrades to handle new technologies/protocols as they're introduced.

This immaculate unit cost me over $700 new. Comes with a very thorough manual--plus Satellite Tracking software (Looks better than NASA's on-screen), plus cable to connect to your computer's serial port, and TNC software. For best offer over $350, I'll include a power supply unit and books on satellite communications to get you going.

>> turned on).

Now wait a minute: what in the world does a VCR have to do with amateur radio?

(thinking)

Hey, I got it! The 20/75 meter jammers must be using VCRs to broadcast their tapes! That way, they can get 6 hours of continuous playing (jamming) before they have to rewind!

Carry on...

5158. Re: Ham Radio "Street Prices" in Japan?

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-29 00:00:00 UTC

Message-ID: <6flrco$7pb$1@usenet50.supernews.com>
Source record: 174748
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

I've followed this "discussion" for sometime and guess I'll add my 2 cents (that's the discounted price)...

First let me say that over the years I have supported HRO and several other distributors to the tune of roughly $5-10K...

However, I routinely travel to Japan and visit Akihabara to see whats new in Radios and Accessories... I have bought my TH59 (1.2 GHz handheld) there because Kenwood in their collective wisdom didn't sell it here. Also the Japanese dealers - who have the same markup and tax issues- are more agressive in discounting radios and more important - accessories. You need to understand how to read the technical components of the manual and as I found out about some piece parts remember metric is around in Japan...

When the Yen was at Y90/$1 there weren't any bargains even with discounts. Now at Y125-130 its better. Kenwood establishes a converted price that sets their USA cost in dollars... Right now they are probably making a killing...and Kewood Japan needs the sales as the Japan economy is pretty bad off...

But then there are the Gas prices in the SF Bay Area vs LAX...

Over the years I have been satisfied with my purchases and overall the quality of the products are the same and often you can get the USA or European version rather then the Japanese domestic model.

I wonder if the same people who criticize this approach buy their cameras and bulk film locally rather then from 47th Street, Adorama or...? where many of their deals are Grey Market - and sometimes not clearly called out in the ads...

5159. Antique Radios & Test Equipment 4 Sale CHEAP!

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-29 00:00:00 UTC
From: Dean <deanntx@e-tex.com>
Message-ID: <351E8F16.E9D89FC@e-tex.com>
Source record: 174749

Hello everyone!

I have just got through adding a lot more antique radios to the site. All of them have pictures now, so there is no mestique as to what they look like. I have also added a few Test Equipment items as well. Remember, these radios are offered as is with no warranty or guarantee if they work or not. Some are missing knobs, cases, power cords, microphones or whatever. I have priced these radios and such very VERY CHEAP!
These radios are for the collectors out there that want to rebuild, restore or just to tinker with some of the older equipment, and as you will see, they are priced to sell.
We have already sold quite a lot of these old radios to a lot of you out there, so make sure you check the list out again, for it has some interesting stuff on it as well.
I want to also add that there is a new REGISTERED room on the IRC that you can chat with other people with the same interests as you, RADIOS! I know a lot of the hams out there do not like to associate with CB'ers and vice versa, but hey, we all started with that junky old CB that is long gone now.
The name of the room is #CB_Radio, and it is located on the Undernet group of servers.
It is up 7 days a week, 24 hours a day, 365 days a year now. If you are just lurking, or want to buy, sell, trade, swap, wish for or whatever your need be, this Chat Room will be a good place to start. Don't let the name of the room fool you, for it is for everyone that has an interest in some kind of radio communication.
Again, the name of the room is "#CB_Radio", and is located on the Undernet group of servers. If you need software to access the IRC, you can get the latest copy of "mIRC" on our website.
If you would like to take a look at some of the Antique Radios that we have, click or go to the URL below.

http://www.e-tex.com/cbcity

Thanks for taking the time to read this entire message. I hope that I did not offend many of you. I am not out to try and make a killing with all this, in fact I am probably taking a loss, for I am sure these radios cost us a lot more than what we are selling them for.

Your joking right? If you want to meet some really nice hams try the
NorCal QRP club, meetsevery 1st Saturday in Pleasanton (sp) after the
local swap. They meet at the California Burger
1 exit down from the college me thinks. I always have a great time when
I go.

I need to write a RTTY decoding package, but dont know where to strart. does anyone have any pointers or examples?

Regards

Steve

5166. Household AM/FM distribution

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-29 00:00:00 UTC
From: Andy Wiese <andy@bluestem.net>
Message-ID: <351EA9D8.F27855D4@bluestem.net>
Source record: 174756

This isn't a HAM question, but ya'll would probably know about this...

I am cabling an underground house, and the clients would like to have
antenna feeds for AM/FM radio as well as typical TV/video services. I am

comfortable with video distribution but know little about radio.

Any ideas?
Can the same RG-6 cable/amplifiers/splitters etc. used for video be used

for distributing FM radio (FM antennas seem to use 75 ohm connections)?
Can FM be distrubuted on the same cable network as video? In
this case I am designing for broadcast TV, with modulated other
channels, so the FM band could be free I would think (wherever that is).

Where does AM fit into all this?

5167. Icom IC-2710H TX audio fix mod

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-29 00:00:00 UTC
From: ka5get@scott.net
Message-ID: <6fmbqg$sqe@news.scott.net>
Source record: 174757

Does anyone have the modification for the TX audio fix on the Icom IC2710h dual band mobile?

The audio is very "hot" and is very easily distorted. Supposedly the fix is simple and involves changing a resistor in the mic it self or something along thoes lines.

Please post here and email mod to me at: ka5get@scott.net as I can not get into the news groups everyday but can get e-mail.

Tnx for the help,
73 de Greg KA5GET

Yes that's right the forbidden radio. I have a friend that has a few
of these BRAND NEW IN THE BOX for $150.
I'M LOOKING FOR THE MODIFICATION that caused Tandy to pull them from the
shelves before the radio even made it into the catalog.
I can put anyone interested in purchasing one in touch with my friend.

Thanks
Michael

An easy answer is to put a dropping resistor in series next time you
replace the bulb. 100 ohm or so.
This helps the life by limiting the inrush.

SB DX @ WW $OPDX.350
Ohio/Penn DX Bulletin No. 350

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 350
BID: $OPDX.350
March 30, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, N4GN, N6VV, W7TSQ, K8XP, 7N1GVB, F6AJA & LNDX, G4BUE & DX News Sheet, I8NHJ, IT9JPK, ON4WW, PS7AB, SM5MX, SP2BIK, SP5ELA, SU1HM and YC0FTD following DX information.

3B8 & 3B9, MAURITIUS AND RODRIGUEZ ISLAND. The "DX News SHeet" reports that Laurent, F5MUX, will be active sometime after April 1st from Mauritius and also a brief operation from Rodriguez. He will only use 100 watts in a R7 vertical. QSL via home call.

7X, ALGERIA (UPDATE). Mark, ON4WW, reports that he will be leaving for 7X this week. His license will be looked at or arranged upon arrival (TNX to info provided by F6FNU). He is also thankful for the help provided by EA5XX and S01M, that may make an operation from West Sahara possible if Mark can cross the border. His possible callsigns (but not vertified at this point in time) may be 7X0WW and S04WW. His stay in 7X-land for QRL purposes is initially 6 months. Mark will use a 100 watt rig (TNX to Yaesu of Europe) and a G5RV antenna (TNX ON4MA). Activity will be mostly CW and low bands. QSL via ON5NT. Mark mentions that for those of you who are still waiting for 9X/ON4WW and 9X4WW cards, Ghis (ON5NT) has received a new batch of 20,000 cards for those calls, and 5X1T. Bureau cards should go out any time as well now.

EA8, CANARY ISLANDS. The German group (DL7AU, DL7URB, DL7UBA, DF8XC and DL7VRO), who were active as ED8CTM in the CQ WPX Contest this past weekend, will continue to be active until April 6th. Operations will be on all bands, CW, SSB and RTTY. QSL via DL7VRO.
Also, look for Ron, G4DIY, to be active April 5-11th as EA8/G4DIY. Activity will be maninly CW on 20, 17 and 10 meters. QSL via home call.

FT5/X/Y/Z, CROZET, KERGUELEN, AMSTERDAM/ST. PAUL ISLANDS. The French DX bulletin "LNDX" reports Rene, FR5HR, will start shortly for a new trip around these rare island for one and one half months. They are not sure

if he will operate from each place. The QSLs for his previous trip are still at the printer's. PLEASE be patient. QSL via the following address: Rene Allegre, 56 rue Leconte de Lisle, 97411 Bois de Nefle, France

H40, THE TEMOTU ISLANDS (Update). Tim Totten, N4GN, sent out three press releases throughtout the past weekend. OPDX InterNet Subscribers will receive ALL/COMPLETE unedited press releases as an additional bulletin. The following are excerpts from Tim's releases for our "Packet Radio" readers..... Tim states, "All systems are 'go' for the launch of the H40AA DXpedition." Team members over the past week and weekend were very busy making final preparations. Activity by team members, using H44RY, was heard this past weekend. As the team did an all-band effort in the CQ WPX SSB Contest. Remember, even though the contest effort will be taking place from the DXpedition site in Temotu, QSOs will count for Solomon Islands DXCC credit (H44) before 2359z on March 31st. At that time, the H40AA call will make its debut, and QSOs will begin counting for Temotu (H40) DXCC credit pending approval of the new country application. Temotu will qualify for separate DXCC status by reason of separation by water. The new DXCC rules, which become effective at 2359z on March 31st, change the separation criteria from 225 miles to 350 km. The Solomon Islands Temotu Province includes the following islands: Santa Cruz Islands, the Reef Islands, the Duff Islands, Tikopia Island, Anuta Island, and Fatutaka Island. The DXpedition will take place on the largest island in Temotu. The island is officially known as Nendo and is more commonly referred to as Santa Cruz Island. The H40AA operation will take place in a small village known as Lata (provincial capital). The H40AA team is sad to report that one of the original team members, Kari, OH2BC, will be unable to make the journey to Temotu. Kari recently suffered a fall in which he broke several bones in his hand. The team also reports two changes have been made to the frequencies listed in the original H40AA announcement (refer to OPDX.348). Please note the following new transmit frequencies: 160 meters (SSB and CW) - 1824.5 kHz and 10 meters SSB - 28395 kHz. The team has received another call sign, H44DX, to be used from Honiara, the Solomon Islands' capital, as the DXpedition operators pass through on their way to and from Temotu. This callsign (H44DX) may be heard on the air before, after, and even during the H40AA operation. H40AA will hit the air waves at 2359z, March 31st, and will continue through the early hours (UTC) of April 13th. Normally, three stations will be in service at any given time. For the first several days, two stations will run almost exclusively SSB--primarily on 20 and 15 meters. During this time, the third station will concentrate on CW, emphasizing 40 meters at night and 17 meters during the day. Beginning April 6th, the emphasis will change to CW operation, paying more attention to the other bands. RTTY operation will begin on April 8th, and will be limited to 15 and 20 meters. The H40AA team would like to emphasize that they intend to stick to the basic plan outlined above. In this way, all DXers will be given the maximum opportunity to make at least one QSO with this 'new one' during the early days of the operation. Following is the complete, updated list of H40AA transmit frequencies incorporating the changes announced earlier:

CW - 1824.5, 3504, 7004, 10104, 14024, 18074, 21024, 24894, 28024 and 50104 kHz
SSB - 1824.5, 3775, 7045, 14195, 18135, 21295, 24945, 28395 and 50104 kHz
RTTY - 14083 and 21083 kHz

Lastly, remember, H44RY and H44DX QSOs count for Solomon Islands credit, while H40AA QSOs will count for the new Temotu Islands DXCC entity, pending approval of the application. QSL H44RY via OH1RY. QSL H40AA and H44DX via OH2BN. Also, the H40AA DXpedition Web Site is now available at the following URL: http://www.iglou.com/n4gn/h40aa/

DX NEWS FLASH..... As your editor was ready to hit the key to send out OPDX.350, a message was received from Kaz, JH1ORA, stating well-known HIDXA DXer Jim Smith, VK9NS, is in the Solomon Islands and will be active from the Temotu Province Islands group. Jim was in Honiara and moved to Santa Cruz Island on March 28th. After 3 hours of sailing by canoe, Jim is now on Pigeon Island located in the Reef Island group. He is currently signing H44/VK9NS and will change his callsign on April 1st to H40AB. His operation should count as the same entity as the H40AA operation. QSL via HIDXA (VK9NS).

JAPANESE ACTIVITY RARE IOTA. A very large group of Japanese operators will activate an island in the Honshu's coastal group (AS-117). Their activity will be from Awashima (otherwise know as Awa Island) beginning 0900z on April 17th and lasting until 2100z April 18th. Operations will be on CW/SSB on 80-6 meters including the WARC bands (check IOTA frequencies). The operators callsigns and addresses were provided to OPDX, but we suggest you listen for details by the operators. Operator's callsign/address are:
JG1SZE/0 Kyoji Ota (QSL MGR), 2-27-12 Nakadai Itabashiku Tokyo JAPAN 174
JJ1SLI/0 Masaji Sakakibara, 2-673-13 IzumiCho Sakado City Saitama JAPAN 350-02
JP1TBG/0 Junichi Ninomiya, 284-1 Kodaya Moroyamamachi IrumaGun Saitama JAPAN 350-04
JQ1ALQ/0 Tateo Tamura, 3-38-11 Toyoda Hino City Tokyo JAPAN
JI3DST/0 Takeshi Funaki, 2-28-26 Hannanmachi Abenoku Osaka JAPAN 545
JR9MAR/0 Toshiaki Ito, 113 Furuueno Syoukawamachi HigashiTonamiGun Ishikawa JAPAN
7K4FGQ/0 Atsushi Murai, 1-37-1 Minami Ogikubo Suginamiku Tokyo JAPAN 167
7K2MEZ/0 Katsurou Maeshima, 202 Niwata Kopo 2764-5 Ishioka Ishioka City Ibaraki JAPAN 315

JT1, MONGOLIA. A large group of Italians will be active from Ulan Bator, Mongolia from April 7-14th. Operators will included I0SNY (leader), I1JQJ, I0TIC, I8NHJ, IK0AEH, IK0FUX, IV3FSG, IK5/EA8AFJ, IK0SHF, IV3ZAC and IZ0AZQ. The group will have two complete HF stations on the air 24 hours and a third station on the satellites plus 6 meters. Their planned activity will be 160-6 meters which includes CW, SSB and RTTY. The special callsign JT1Y will be used from the Mongolian Radio Sports Federation Club station JT1KAA (located in Zone 23). The team plans on leaving a 40 meters monobander behind for the JT1KAA station. The following are the suggested

frequencies:

CW - 1835, 3505, 7005, 10105, 14015, 18075, 21015, 24895, 28015, 50115
SSB - 1840, 3780, 7080, 14185, 18145, 21285, 24945, 28485, 50145
RTTY - 14080, 21080 kHz

Log checking will be available on the 425 DX News WEB pages. The team plans to upload the logs to the Web on a daily basis in order to let amateurs check them while the activity is taking place. Contributions and QSLs can be sent to I0SNY, Nicola Sanna, Str. Gualtarella 8/M, 06132 S. Sisto - PG, ITALY. Visit the JT1Y WEB site for updates at: http://www-dx.deis.unibo.it/htdx/jt1y/

QSL INFO AND NEWS.....
OPDX was advised that the ZK1ZZP cards were received from the printers and that the process of sending them out has begun. A large batch of cards has already been mailed out, but we were told they will now be going out on an almost daily basis.

Just before the contest weekend, Dimitris, SV1CIB, informed OPDX that he received the special callsign, J43PTR, for the CQ WPX SSB Contest. If you were lucky to catch him, QSL to SV3AQN via the bureau or direct.

A group of Indonesian were active from Baturaden, in Central Java, Indonesia, using the special callsign YE2B during the CQ WPX SSB Contest. QSL to YC0FTD, via the bureau or direct (with one green stamp) to: Mr. Andreas Wisnu Widjaja, PO Box 6193 JATH, Jakarta 13061, Indonesia.

OPDX has mentioned this once before, and we were asked to do it again. QSLs for Paul, A35RK, ONLY (repeat only) go to Bob, W7TSQ. Paul does not have QSL cards. DO NOT EXPECT A RESPONSE IF CARDS ARE SENT TO THE A3 BUREAU AS THOSE CARDS WILL NEVER REACH HIM. Also, PLEASE do not send E-mail to Paul. He (Paul) has asked a particular publication (ed. we choose not to list it) to delete his E-mail address and block any updating. It costs Paul about $1.00 per min as he has to pay for online time and pay by the minute for a long distance call to send/receive messages. If you have any questions etc. for Paul, please send them through Bob, W7TSQ. He has ways to get them to Paul which does not cost him money.

QSLs for II9ZZ, who was Gianni, IT9PKO, active during the CQ WPX SSB Contest, should have cards sent to IT9PKO: Gianni Casiraro, P.O.Box 10, 97015 Modica Bassa, Italy.

The new address for F6HMJ (specially for 3B8/F6HMJ) is: Jacques Motte, Le soleil levant - B8, 4 avenue des rives, 06270 Villeneuve - Loubet, France.

SN0, POLAND (Special Event). A special event station SN0JG will be active from Gdansk, from April 3rd until June 30th. The station will be on the air to celebrate the 500th anniversary of printing technology in Gdansk. QSL via SP2BIK.

SPDX CONTEST REMINDER. Zygi, SP5ELA, The President of Warsaw University of Technology RC (SP5PBE), would like to inform/remind OPDX readers and contesters that the 1998 SPDX Contest will be held on April 4-5th. Entries can be all modes or single mode CW/SSB. The SPDX Club of PZK has the honor to invite the radio amateurs from all over the world to participate in the SPDX Contest. The object of the contest is to establish as many contacts as possible between radio amateurs around the world and radio amateurs in Poland. For more information, the following E-mail and URL addresses were provided:
Rules: http://www.sp5pbe.waw.pl/SPDXC/SPDXC_Rules.html
Instructions: http://www.sp5pbe.waw.pl/SPDXC/spdxcI_WW.html

E-Mail Logs: spdxc-logs@writeme.com

SU8, EGYPT (Special Event). Hossam, SU1HM, reports that for the first time ever, amateur radio activity will take place in the ancient Egyptian city of Luxor during the period of March 29th and April 4th. The event is organized by the members of ERAA and the special callsign SU8LXR was assigned for this occasion. Operators Ezzat/SU1ER, Ahmed/SU1AH, Said/SU1SK, Sayed/SU1SA, Hisham/SU1HB and Hossam/SU1HM will also be using their own callsigns/8 and the ERAA's club station will sign SU0ERA/8. Look for SU8LXR on 20 meters (14220 kHz). Activity on other bands/modes will be announced on the above QRG.

TM0, OLERON ISLAND. Jean Claude, F5LEJ, will be active from this French island as TM0DX from August 1-15th.

V63, MICRONESIA (New IOTA). Lew, N6VV, announces that an operation from Mokil Atoll is scheduled for June 1-7th. This will be a new IOTA island plus the first time an operation will take place from Mokil Atoll. Mokil Atoll is located in the State of Pohnpei (IOTA letter d.) in the Federated States of Micronesia (V63). Before the activity on Mokil Atoll, the team of Mike/NG7S, Lew/N6VV and Dan/W7DR will be active from the former German Colonial City "Kolonia", Pohnpei Micronesia (IOTA OC-010), May 24-31st. The team during this time will also operate in the CQ WPX CW Contest (Multi-Op) as V63VV. Lew, N6VV, has received the callsign V63VV. Dan and Mike will also be receiving V63 callsigns. N6VV, W7DR and NG7S have already received the permission to visit the remote Micronesian island, Mokil Atoll. Callsigns to be used on Mokil are V63VV/p and the other assigned callsigns by Dan and Mike. Their equipment list includes: Yaesu FT-1000MP, FinnFet FF-1001 Solid State KW amplifer, Force/12 C3S Yagi, Monoband GP Verticals for 40,20,15 meters, R-7000 Vertical and wires for 80 and 160 meters. QSLs for V63VV go to N6VV (CBA or Bureau). The V63 callsigns for W7DR and NG7S will go to their home callsigns. For more information contact Lew, N6VV at: E-mail - lew@book.net, home phone +1.925.945.6413 or fax +1.925.944.4989

XV7, VIETNAM. Right before going to print, OPDX received the following from Rolf, SM5MX. He reports that he is now in Hanoi, Vietnam, again, where he will activate his dormant callsign XV7SW from the end of March until the middle of May. As this is a private visit and Rolf is travelling light, he is only bringing an IC-706 and a 5-band vertical for 80-10

meters. Hence, no QRO, no beams and no Top Band this time. Luckily though, upon arrival, Rolf was invited to work from the QTH of fellow Sweden Torsten (XV7TH), so Rolf is now active with a TH-5 triband Yagi; 80 and 40 meters may be activated later with the vertical. Because of the rules in Vietnam, he is restricted to operation on certain fixed frequencies only. The designated frequencies for XV7SW are: 3506, 7007, 14016, 14021, 21016, 21019, 28016 and 28019 kHz. Rolf will concentrate on CW as usual but may operate some SSB occasionally on 7086, 14243, 14249, 21421, 21427 and 28661 kHz. Since operation hours will be irregular, XV7SW cannot handle any skeds. QSL via his home call SM5MX, either via the bureau or direct to: Rolf T. Salme, SM5MX, Korpstigen 5 B, SE - 135 53 Tyreso, SWEDEN. He will handle all incoming cards upon his return to Sweden in May. While in Southeast Asia, Rolf is planning a DXpedition to another country. More information later, KYFC.
Also, just a quick reminder that Steve/K2WE/3W6WE and Les/W2LK/3W6LK are still active with their own 3W callsigns until March 31st (refer to OPDX.347). Their activity will probably continue (not sure how long) but under the Kasati Ham Club callsign 3W6KA.

ZK2, NIUE. Look for Frank, DL7FT, to be active until about April 12th as ZK2FT. His activity recently has been mainly on SSB 20-10 meters. QSL via his home call.

ZV3, MARINHEIROS ISLAND (BRAZIL). PY3ACC and PY3CKO will activate this Brazilian (DIB 49, not IOTA) April 17-19th, ZV3A and ZV3C, respectively. Activity will be on 40 and 20 meters CW/SSB. QSL via bureau or direct to: Alberto V. Christensen, R. Irm&#65533;o Jos&#65533; Ot&#65533;o 170/1302, 90035-060, Porto Alegre (RS), Brazil.

It's being broadcast for the world to hear. We don't need you pretending
to be an HF repeater. We've know about these problems long before you
knew what a radio was. And these problems began long before any of us
were born.

Here's a quote regarding hams interfering with Titanic-related traffic
back in 1912:

"With the first news of the sinking of the Titanic, every amateur
in America camped on his key and added to the bedlam..."

"Thousands of messages piled up at the shore stations. At the solicitation
of the American Marconi Company, the government ordered all radio stations
north of Hatteras closed down, leaving only those at South Wellfleet,
Siasconsett, Sagaponack, and Seagate open; they were to handle Carpathia
traffic exclusively. The order was enforceable only on commercial
stations; the amateurs blithely continued "on the air." The situation
became so desperate that Newport Radio, a naval station, "requested every
station in range to keep out" until a list of the survivors could be
obtained. Department of Justice men went to work tracing the origin
of false and misleading messages."

>Here we go with the personal attacks. Why would a license have been revoked,
>or have not been revoked "yet?" The only grounds for license revocation is
>illegal operation. This is trypical of Jeff: assumes that anyone whom he
>disagrees with is guilty of engaging in illegal activities. I've seen him use
>this tactic with others on several occasions.

My comment was directed at Drew. When he used to post under his
real name, he advocated illegal activities. It's a small step from
advocation to practice. Why would you defend him?

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <611>

In response to last weeks article on the Disaster Victim Information Service came this interesting email:

From: "NACEC Center. Minneapolis MN" <nacec@nacec.org>
Subject: Re: NACEC DVIS

Dave,

Please advise everyone that because there has been a lack of interest shown in the DVIS Training and Certification program, it will not be conducted.

In fact, after 6 years of operation NACEC will cease all disaster response and military family support operations effective March 31, 1998.

The reasons for this action are many, and more or less out of my control.

However, we do wish everyone well and great success in their efforts to help those in need when disasters srikes.

Warmest Regards,
Edward Addy
Director
NACEC
.....
From: Jim Robinton <robinton@avherc.sanders.lmco.com>

Dave,

I am new to the list and use NETSCAPE as a mail reader. Since you have now some <600+> readers I thought I would point out a BUG in NETSCAPE that may affect your other readers (it has occurred in each of the message sent out so far).

Apparently lines beginning with certain sequences of the word FROM (an some other lead or follow characters) will cause NETSCAPE to cut the message up into pieces.

My belief is that it mistakes embedded messages and just plain text were the word FROM appears at the beginning of the line for a new message in the INBOX and makes a message with no subject that contains the remaining pieces.

If enough other readers are bothered by the bug, perhaps a quick scan or set of character insertions will prevent it from occurring.

Respectfully Submitted,
Jim Robinton /N1CRZ
Windham, N.H.
.....

Current Events:

ERI '98 has been called due to El Nino.
The 1998 ACS Emergency Response Institute scheduled for May 2-3, 1998 has been cancelled for this year by ERI Incident Commander Ben Green. Most of the ERI Staff continues to do battle on the statewide flooding caused by El Nino, and
OES has been strained to the limit in its disaster response.
We hope to have ERI back for the Spring of 1999.
.....

From: Anderson-CDA, Gregg <Gregg.Anderson@STATE.MA.US>

On Saturday, May 16th, from 1pm to 4pm, A training seminar on Red Cross Damage Assessment for Amateur Radio Operators will be presented by Kevin O'Connell, the Emergency Services Director for the Massachusetts Bay Chapter of the American Red Cross. The Training will be held at the Massachusetts Emergency Management Agency Headquarters facility in Framingham.

This training is intended to allow amateur radio operators to participate as part of the Damage Assessment team in a large scale disaster, rather than soley as communicators.

From my personal experience with the NO NAME storm a few years back, can be one of the most interesting facets of your public service experiences.

No registration is required.

Directions:

MEMA Headquarters is on Route 9 Eastbound in Framigham, just west of route 126. From the west, take the Mass Pike to the first Framingham exit. Head east on Route 9, until just after the State Police Headquarters turn into the fenced in area. From the east, take the Mass Pike and exit at the first Framingham Exit, head west on rt 30. Route 30 will merge with Route 9. Follow route 9 until the first exit, marked Framingham State College but take an immediate left on the ramp so that you take a U turn and head east on route 9. Be advised that taking a left turn at the Lights at Walgreens is Illegal. Head now East on Route 9, until just after the State Police Headquarters, turn into MEMA Headquarters.

The facility we'll be meeting in is an underground bunker, with a set of doors controlling access. You can't miss the three 180 foot radio towers on the premises.
.....

From: kaf8571@juno.com (Kay E Neil)

Here are a couple of items for the newsletter/magazine.

Next State Council meeting - June 20 Muscatine, IA at the Salvation Army
Time: noon to 4:00 p.m.

Search and Rescue Training Exercise - September 19
Margo Frankel State Park
Contact Ray Tucker, President 515-266-6808
for information

Iowa State REACT Convention - October 24 - 25
Best Western Bavarian Inn
5220 NE 14th Street
Des Moines
Start time: noon Saturday
end - 4:00 p.m. Sunday

Thanks -

Mrs. Kay Neil
1st Vice President
Iowa State REACT Council
.....

What's New on the Web:
.....

From: Christopher Effgen <build@ALASKA.NET>

I have been meaning to write to this list about the changes at my site which I call The Disaster Center.

I recently reformatted the appearance of the State's pages.

http://www.disastercenter.com/states.htm

and added a search engine specifically for disaster related subjects.

http://www.disastercenter.com/linksearchplus.hts

which anyone is welcome to list their disaster related page with.

The site features the most comprehensive directory of emergency management related web sites on the internet. Every State page has a message board for the posting of disaster and emergency management related news and notices.

During some disasters the site is activated and the disaster events are followed. We have been averaging around 14,000 page views a week at the web site.

One of the things I am trying to do is to bring together in a single location the resources that people can use to find or get the latest disaster information. Each State page contains what I think are the best links to provide that information. I would be interested in any suggestions members might have to improve the site to provide better linkages to internet accessible information. I would be happy to provide hosting for the proposed EMA List Website. And if any member of this group has any other ideas please forward them to me.

Most of the people go to the site because we provide one of the most comprehensive directories of U. S. newspapers on the internet. While there I try to raise a level of awareness regarding disaster issues.

There is a plan of development for this website that will take me at least a year to realize.

Christopher Effgen

This week's EMCOMM Bulletin:

EMC125 TSUNAMI! How to Survive. 1/3 For release 3/30/98

Material taken from a l996 Pamphlet of the California OES Earthquake Program of the Earthquake Education Center, Humboldt State University titled "TSUNAMI! How to Survive the Hazard on California's Coast". Concept and some text originally from the Oregon Department of Geology and Mineral Industries.

Risk: Since l812 the California coast has had 14 tsunamis with wave lengths higher than three feet; six of these were destructive. The Channel Islands were hit by a big tsunami in the early 1800s. The worst tsunami resulted from the l964 Alaskan earthquake and caused 12 deaths and at least $17 million in damages in northern California.

The l992 Cape Mendocino earthquake produced a one-foot tsunami that reached Humboldt Bay about 20 minutes after the shaking. Although not damaging, this tsunami demonstrated that locally generated tsunamis can reach the California coastline quickly. Had the earthquake lasted longer, the wave heights would have been higher. Evidence suggests that large earthquakes capable of producing local tsunamis recur every two or three hundred years.

What is a Tsunami (soo-nah'-mee)?
It is a series of sea waves most commonly caused by an earthquake beneath the sea floor. In the open ocean the waves travel at speeds up to 600 miles per hour. As the waves enter shallow water, they rise rapidly. The waves can kill and injure people and cause great property damage when they come ashore. The first wave is often not the largest; successive waves may be spaced many minutes apart and continue arriving for a number of hours.

Locally generated Tsunami
If a large earthquake displaces the sea floor near the coast, the first waves may reach the shore minutes after the ground stops shaking. There is no time for authorities to issue a warning.

"Distance Source Tsunami
Tsunami waves may also be generated by very large

earthquakes in the Pacific Ocean. These waves reach the
coast many hours after the earthquake. The Tsunami Warning
Center alerts local officials, who may order evacuation.
Those in isolated areas may not hear official evacuation
announcements. A sudden drop or rise in sea level may be
a warning of impending danger. Move inland or to higher
ground immediately.

You are correct, but there is also another avenue of tort in these
cases called "legal in-bad-light." This is strictly at a federal level
and permits a plaintif to collect damages if a publisher makes public
erroneous information that places a person in bad standing with one or
more other persons -- even if there is no immediate or long range
monetary loss involved.

Our attoornies briefed us on this about five years ago when the first
of these cases was filed in Washington DC in a political dispute that I
cannot remember the exact details therte to.

Possily we have a lawyer on the sunject that can explain 'legal in bad
light' in a more difinitive way.

Another answer is to get in touch with your local classic car spares
company. MGs (60s and 70s vintage) Used 14v bulbs in their dashboard
switches. These are small screw in ones about 3/8ths long and 1/8th
diam and are still available.

Fine. I choose to listen and report on the activities that I hear. That is my
legal right and is well within the charter of this newsgroup. Reading and
responding to that which I have written is optional on your part.

(Titanic quote deleted for brevity)

>>Here we go with the personal attacks. Why would a license have been
>revoked,
>>or have not been revoked "yet?" The only grounds for license revocation is
>>illegal operation. This is trypical of Jeff: assumes that anyone whom he

>
>My comment was directed at Drew. When he used to post under his
>real name, he advocated illegal activities. It's a small step from
>advocation to practice. Why would you defend him?

Because I see no evidence that he has engaged in any illegal activities and is
therefore undeserving of the comment you made about his license "not having
been revoked yet." If I am wrong and he has engaged in illegal activities,
please correct me by providing this information.

5203. FT-3000M Programming Question

I played with one At HRO. The audio is excellent, best audio of all the HT's. Otherwise has all the bells and whisles as the others. It does have only one band rx rather than dual vhf/uhf rx. Last QST has a HT comparision article.

Well I think you need to look at the Icom T8. Has all the features of the G71A with 6 meters and FM broadcast band (76-108). Will also cover 800Mhz with cell block and a couple of other frequency rangers as well. And the audio is just as good if not better than the G71A. Same mil spec rating and smaller. Comes with a nickel metal hydride rather than a ni-cad pack and is $30.00 bucks cheaper!!!

Actually, Funai only makes custom VCR electronics and cabinetry. The
tape transport -- including sensors (like that diode) -- are either JVC
or Panasonic. Many use the Panasonic "G" chassis hich has been known
to develop sensor or position switch problems from time to time.

I have several Funai assembeled VCR's. I use one to air-check our 10
PM news. Its been doing that for 12 years, and the only repair I have
made to it was changing drive belts and rge pinch roller.

The Funai manufactured VCR falure rate is no better or worse any any
other manufacturer. While my main field is that of maintaining Sony
and Ampex broadcast VTR's and VCR's, television post production systems
and -- no -- video disk storage/playout systems -- I do come in contact

with some consumer units. Except for Sony (which I deem to be the best constructed) -- all others are about equal. On some, the only difference is the brand name on the front panel.

Yes this is a very popular radio for 6meters. It requires
a special eprom programmer and realignment. If you find someone that
already has one on 6 a regular eprom programmer will clone it.

Hi Bill,

They're made out of oak, have felt backing, elastic holders built in,
etc., etc., etc.,...right? Handmade?

If so, I know exactly what you're looking for - I've got 4 of them right
here on my desk! Yep, they're called "RadioRest"'s, and the guy who
makes them is in the midwest somewhere (I think his name was John - I
met him when I bought my RadioRests at the Kansas City hamfest last
year).

I'll look around (I'm in Kansas City) and see if I can come up with an
address, phone number or something, and let you know - he had stickers
on the RadioRests I bought, but I took them off :(

See ya,

Bob

The adove address has been modified to prevent spamming - please post

Hey Bill,

If the support you're talking about is made out of oak, has felt
backing, and other little goodies, then I know which one you're talking
about...and yep, it's called radiorest.

I've got four of them sitting here on my desk holding my trunk tracker,
and 2 meter radios. Nice supports, and handmade too - not the cheap,
stamped out of plastic junk.

I'll look around and see if I can come up with the guys address or phone
number or something (I think his name was John). I met him at the
kansas City hamfest when I bought my radiorests. He had a sticker on
the units with his name, address, etc..., but I took it off :(

Will let you know.

Bob

The above address has been modified to prevent spamming - please reply

I disagree, I've owned them both and found the G71A's audio to be
superior. I found the G71A audio to seem lounder and at maximum volume
setting the audio quality suffered on the FT50. I also found the FT50
unusable in a high RF environment, the G71A was usable. I've owned both
and recommend the G71A over the FT50R.

5231. Need Info: 925-928MHz Tx with 3mW EIRP output

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-31 00:00:00 UTC
From: ngh1@topaz.cqu.edu.au
Message-ID: <6fplnt$n7k$10@janus.cqu.edu.au>
Source record: 174669

Hello everyone,

I would like to transmit a video signal from my remote robot's CCD colour video camera to my PC. Therefore, I need a video transmitter and receiver operating at the frequency range of 915 to 928MHz. The maximum EIRP has to be 3mW or less and line-of-sight transmission. I might use two video transmitters and receivers due to its low RF (3mW) output set by Radiocommunication Class License or ACA. I will install one video transmitter at the courtyard and another one at the foreyard. They will work like the cellular network.

The robot controls signal transmission will use the similar concepts explained above and I guess Wireless Radio Modem will do the job.

So, my question is whether I need to build one by myself or I can purchase any of those video transmitter and receiver that operating at 3mW? What soft of antenna I need to use?

Please let me know if you have some information regarding to this transmitter/receiver such as where can I purchase and the costs. For your info, I am staying in Australia.

Thanks.

Ping

5236. 2 Meter Handhelds: Icom IC-T2A vs. ADI AT-201

Newsgroup: rec.radio.amateur.misc

I looking to purchase my first 2 meter handheld. I've looked at the specs and the two HTs that I'm interested in my price range (~ $175) are the Icom IC-T2A and the ADI AT-201. Both have a good number of functions for the price. I am wondering if there is people out there who have these units and are willing to share their thoughts on them. Good points and bad points of these models would be greatly appreciated. If anyone knows of any other units, within my price range, that I should be contemplating, let me know.

Check their advertising for indications that it can be modified for MARS/CAP.

However, before you convert one for extended transmit, let me give you some thoughts based on personal experience tracking radio interference, discussions with the Director of Rescue Squad Operations for my state, and from news reports:

(1) A wide coverage rig often will be affected by intermod from pagers/etc.

(2) Some frequencies operate on channels 12.5KHz off from the way Amateur frequencies are arranged. You will not be able to get a ham rig on frequency in some applications. The Family Radio Service is an example.

(3) Item 2, plus high power, could make you "stand out like a sore thumb" and attract some unwanted attention. Again, the FRS (with power levels of .1 to .5 watts) is a good example.

(4) Using a non-accepted transmitter in another radio service could get the license holder in hot water. A good example is the use of an Amateur rig which has been tweeked to cover rescue squad or fire department frequencies. It is not approved for use outside the ham bands. One also could inadvertently cause the license holder to exceed the number of authorized radio units. Your local rescue squad will have a tough time with its next fund-raising campaign if local newspapers have just reported they paid a fine to the FCC for illegal radio operation! (It happened in North Carolina, several years ago).

(5) Having a radio modified for out-of-band transmit creates a serious condition if the radio is stolen, or if it is picked up and played with by friends, co-workers, or family members. A couple of young men are in deep trouble in the midwest for transmitting false distress calls on a rescue squad frequency. They had search teams combing the nearby hills for two lost boys--who were discovered (by a DF team) to be sitting in the bedroom of their home. The sheriff wants Dad to reimburse the county the tens of thousands of dollars spent in the search for two non-missing boys. Meanwhile, the radio was confiscated.

In a reverse of this, we tracked down a major source of jamming to Amateur 2-meter repeaters in North Carolina and found that a rescue squad member had an Amateur rig mounted at a 24-hour dispatch point in his business. The radio had been modified for rescue squad frequencies. (He had one at work and another in his car.) Unknown to him, the evening and midnight shift workers in his

business were playing with the radio, and were causing problems for all the channels loaded into the memory, including local ham repeaters. Fortunately for him, the DF team which found this situation kept his identity to themselves. There were "lynch mobs" from several of the repeaters who wanted to pass out their own brand of justice!

To summarize, unless there is a compelling reason for modifying a radio for extended transmit, don't do it.

What method you use is up to you - it just boils down to a memory process...you have to memorize the code alphabet.

Learn the characters at 13 to 15 wpm. It's silly to learn the sound of a code character at 5 wpm only to try and relearn it at 8 wpm, then 10 wpm, then 13 wpm. Learn to recognize them at 15 wpm right off the bat. It'll save you a lot of grief.

Good luck.

FM Broadcast band, 88-108Mhz, falls between tv channels 6 & 7, so FM can be distributed on the same cable with tv. Levels are important if the two services are to avoid interference with each other.

AM is quite a different matter. Although AM frequencies can be put on the same cable with TV, the attendant noise and interference can be more than a bit objectionable. AM should be assigned to a different transmission line and that line should be well shielded and isolated from both powerlines, which carry and radiate noise, and from any video bearing cable. Earth grounds are important. So if you are going to cut corners anywhere in this installation, that would be the one area that should not be compromised. A solid earth ground will eliminate, most if not all problems with noise and interference, especially on AM.
Shortwave signals may also be carried on the AM transmission line.

> Regards
>
> Christopher Cox

Your memory is selective. The Japanese cars of the 70s were more crappy than
theirus counterparts. There were two differences :1) they were cheap, and 2)
they got
fairly good gas mileage. The Hondas of that era were little more than 4 wheel
motorcycles - and just about as dangerous. The simply fact is that the
Japanese cars
of the 70s were the deadliest/passenger mile on the road at the time. (I had
to laugh
a couple of years ago when Lexus was bragging about their new safety focus.
One
feature that they bragged the loudest about was a couple of hooks on the from
hood
that would prevent the hood from going through the windshield in a front-end
collision.
This "new" feature had been on my VW Rabbit more than 20 years earlier.)

I might agree with you if you had said that the US cars of the 70s were the
crappiest/$
in history; but even then, the Japanese were running no better than a close
second.

The US has little financial incentive to make ham gear. The business
volume/profit margins
are not worth sacrificing capacity from their cellular, PCS, and business

radio
factories. Why should they focus on a potential market of ~750K when there is
a
more profitable market with 200M+ potential customers? They aren't on their
backsides they just see little reason to take resources away from areas in
which they
are working hard.

BTW #1, your post has little to do with this discussion. The point made by
many is that
the money "saved" by bypassing US distributors is actually paid by the buyer
anyway
in the form of import fees and duties. The units purchased around the proper
US distribution
channels also effectively have no warranty. In other words, you could save
more money by
buying it wholesale in the US and you would still get a guarantee.

BTW #@, your post (as does mine) has little to do with r.r.s.

73,

Doug

Recently my students were working on a scanner to repair. They wanted a
frequency to listen to so I gave them 147.045 the local repeater. The
students said the most interesting thing they heard was the robot voice
on the repeater all day. There were many other voices on the repeater
but the were so called "live" hams. The kids said most of the
conversations were about the weather, getting coffee and other inane topics.
One who recently asked me for a book on ham radio told me to forget it.
Ask Justin or Jim.
Burt, burt@innocent.com http://www.geocities.com/WallStreet/5169

Jim, WK1V has GOT ME on this one. I purchased it through him at HRO. Darn... I knew I should have passed on posting my comments to this thread.
YOU GOT ME ON THIS ONE REAL GOOD...

Whats the secrete combination to re-set the CPU on the Yaesu Ft-50R?

The manual says to hold the "MON" "FW" "DIAL" and power up at same time.

I have done this and nothing happens? Done it two or three times.

I want to re-program my memory channels and I wanted to clear every
thing to do so.

Help!!!

Jon

I don't know why you'd put yourself to that trouble! Anyway, see if you can find the RTTY12G BASIC program, written about ten years ago for IBM PC-1s by Brian Davis, W9HLQ. I ran it for quite a while using an old HAL ST-6 demodulator. Glenn Welman, KF4RB, also has one called RU. Good luck! 73, John, K2CIB
